THE LABOUR GAZETTE

Prepared and edited in the Department of Labour, Ottawa

MINISTER—THE HONOURABLE JAMES MURDOCK.

DEPUTY MINISTER—F. A. ACLAND.

Volume 22

JANUARY, 1922

Number 1

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

The month in brief

This issue of the **LABOUR GAZETTE** contains the full text of an important judicial decision respecting picketing in Canada, and a summary of a similar decision in the United States. It also contains a report of the proceedings of the Third Conference of the International Labour Organization (League of Nations) held recently at Geneva, and the text of the draft Conventions and Recommendations there adopted for the protection of agricultural and industrial workers.

At the beginning of December the percentage of unemployment among members of trade unions stood at 11.1 as compared with percentages of 7.4 at the beginning of November and 10.2 at the beginning of December, 1920. Many unions continued to indicate a substantial amount of short time. According to reports received from over 5,500 employers, there were further contractions in the volume of employment afforded and conditions continued to be considerably less favourable than during December, 1920.

The average cost of the weekly family budget of 29 staple foods for 60 cities was \$11.00 at the beginning of December as compared with \$11.08 for November, \$14.84 for December, 1920, and \$7.96 for December 1914. The cost of food, fuel and rental averaged \$21.49 at the beginning of December, as compared

with \$21.60 for November, \$25.87 for December, 1920, and \$14.26 for December, 1914. In wholesale prices the index number of 271 commodities was slightly higher, being 230.7 for December as compared with 227.3 for November, 290.5 for December, 1920, and 137.6 for December, 1914.

The time loss due to industrial disputes during December was less than during November but greater than during December, 1920. There were in existence during the month 17 strikes, involving about 2,883 workpeople with a time loss of 64,733 working days. Only one strike was reported as having commenced during December. One of the strikes commenced prior to December was reported terminated, leaving 16 strikes, involving about 2,458 workpeople, on record at the end of the month.

Proceedings under the Industrial Disputes Investigation Act

During December the Department received reports from three Boards established to deal with disputes between (1) the Algoma Steel Corporation, Sault Ste. Marie, Ont., and certain of its employees, being engineers, firemen, conductors and brakemen; (2) the British Columbia Electric Railway Company, Limited, and certain of its employees, being motormen, conductors, shopmen, etc., members of Local Divisions Nos. 101, 109 and 134, Amal-

gamated Association of Street and Electric Railway Employees of America, and (3) the International Transit Company, Sault Ste Marie, and certain of its employees, being motormen, conductors, barn employees and interlocker signalmen, members of Local Division No. 850, Amalgamated Association of Street and Electric Railway Employees of America.

One application was received for the establishment of a Board and a further appointment was made in connection with an application which had been received during November.

Jottings

The following conventions of International Unions will be held during the first quarter of 1922: The International Seamen's Union of America will meet at Chicago, Ill., on January 2. The National Organization, Masters, Mates and Pilots of America will meet at Norfolk, Va., on January 16. The National Marine Engineers' Beneficial Association will meet at Washington, D.C., on January 16-21. The Order of Sleeping Car Conductors will meet at Chicago, Ill., on March 13 to 18.

The Natural Resources Intelligence Branch of the Department of the Interior has just issued a revised edition of "Compact Facts", which contains in concise form, information regarding Canada; its area, population, trade and industries; their extent, capital invested, wages paid, values of live stock, principal crops and amounts produced; mineral resources and present production; also forest resources and forest products. Copies of the booklet are available on application to the superintendent, Natural Resources Intelligence Branch, Department of the Interior, Ottawa.

The British Columbia Minister of Lands stated in the provincial legislature on November 17 that \$1,701,500 had been borrowed by the province from the Dominion under the "Better Housing Act". Of this sum \$1,692,950 had been loaned to various municipalities. The

interest charged on the loan by the Dominion to the province is 5 per cent, the same rate being charged by the provincial government to the municipalities.

On December 1, the British Columbia legislature passed a resolution moved by the Honourable William Sloan, minister of mines: "That this House places itself on record as endorsing the principle of old-age pensions, and respectfully directs the attention of the Federal authorities to the desirability of legislation being enacted based on the conclusions of the conference of the year 1919."

Under an amendment to the British Columbia Railway Act, street railway companies are required to make application to the Minister of Railways before changing from two-man to one-man operated street cars, and must submit the routes upon which such a change is proposed to be made. One-man operated street cars must be equipped with certain specified safety control devices. Under this rule permissoin was granted to the British Columbia Electric Railway Company in December to operate one-man cars in Victoria, Vancouver and New Westminster.

Last winter, the Saskatchewan government, with the assistance of the Canadian Pacific Railway, operated agricultural instruction cars throughout south-western Saskatchewan. Meetings were held at 60 points and were attended by 12,265 persons; the system of farming recommended by the Better Farming Commission was explained, and 12,000 copies of the Commission's report were distributed. The government has arranged for the appointment during 1922 of representatives in the local improvement districts of the south-west of the province to co-operate with farmers in furtherance of "better farming."

At a convention of Farm Women of Manitoba, Mr. J. H. Evans, provincial deputy minister of agriculture, stated that the endeavour to secure immigration of household workers had not proven

sufficiently successful to warrant continuation of the policy. He said that 175 household workers had been brought to Manitoba but it was found that in the British Isles positions were available for all trained help, only the partially trained being available for overseas at an unjustifiable expense.

In reply to an inquiry in the Saskatchewan legislature on December 15, it was stated by the government that 342 female domestic workers had to date been brought into the province under the government's assisted passage scheme. The total amount of money advanced to these domestics was \$29,263, of which \$24,190 had been repaid. The number of harvesters brought into Saskatchewan through the Employment Service for the harvest of 1921 has been given officially as 26,495, the advertised wages being \$4 a day and board. The wages advertised by the Employment Service for summer work on farms was \$60 per month.

Toward the close of 1921 the Workmen's Compensation Board of Alberta discontinued the practice by which inspectors formerly called on employers to collect the money owing for the insurance of their employees under the Act. The onus of making remittances direct is now placed on the employers. Several prosecutions are reported of employers who failed to comply with the new rule.

The British Columbia legislature passed a resolution on December 2 requesting the Dominion Government to take the necessary steps to amend the "Prison and Reformatories Act" and "Juvenile Delinquents Act" respectively to provide for indeterminate sentences and parole to juvenile delinquents in British Columbia.

The Mother's Allowances Act of Manitoba, at the end of 1921, was providing for 560 women with two or more children. Eighty new cases were added during the year to those under the care of the commission.

The third meeting of the fall session of the Quebec division executive of the Canadian Manufacturers' Association was held at Sherbrooke, Que., on October 20. The idea of bringing in a workmen's compensation act based on the act now in force in Ontario, was not approved of, but by a unanimous vote it was decided to seek to amend the present Act and bring it up to date. Several amendments were suggested and referred to a special committee appointed last year to study this matter.

The British Minister of Health has introduced a bill to extend, temporarily, beyond twelve months, the period during which unemployed persons may remain insured under the National Health Insurance Acts. Such persons will be required to show that their absence from work has been due not to any change in normal occupation, but to inability to obtain employment. The cost of benefits in this case will fall on the funds of Approved Societies, no additional cost to the Exchequer beyond the normal contribution being involved.

The provision of baths at coal mine pit heads has been urged by the organized workers of the British coal fields and has also been recommended by the standing joint committee of industrial women's organizations, the cost of erection to be paid out of the fund subscribed under the British Mining Industries Act, 1920, for the improvement of social conditions of colliery workers. A joint committee of representatives of mine owners and of the Miners' Federation has the disposal of the fund under consideration.

The United Mine Workers of America propose to test the validity of the Kansas Court Industrial Relations law, claiming that the law violates the state and federal constitutions by empowering the court to fix wages and working conditions and by making innocent acts a criminal conspiracy.

The Division of Women in Industry of the United States Department of La-

bour has issued a special bulletin (No. 109, September, 1921), dealing with the employment of women in 5 and 10 cent stores. The bulletin is based on a study made in order to "throw light on the employment of women in this growing industry, so that standards and policies may be formulated to increase their efficiency and to advance their opportunities for profitable work."

The results of the Economic Essay Contest of 1921, conducted by the Chicago tailoring firm of Hart, Schaffner & Marx, and announced in the May, 1921, issue of the LABOUR GAZETTE, are as follows: In Class A the first prize of \$1,000 was won by Miss Hazel Kyrk, Ph.D., for a study entitled "A Theory of Consumption." The second prize of \$500 was won by Charles Stillman Morgan, Ph.D., for a study entitled "The Regulation and Management of Public Utilities." In Class B the first prize of \$300 was awarded to Paul T. Nutting, Oberlin College, for a study on "Public Problems of Bituminous Coal, and the second prize of \$200 to William John Schultz, Columbia University, for a study on "Six Years of Inflation, 1914-1920."

A Safety Section has been formed in the Scientific Division of the International Labour Office with Dr. Frederick Ritzmann, formerly chief of the Industrial Department of the Labour Ministry of Baden, in charge. It will co-operate with the section on Social Insurance in the study of accident insurance and workmen's compensation laws and administration and with the Industrial Hygiene Section in the study of industrial safety. Medical and surgical treatment, and methods of re-education, re-training and restoration to industry will also be studied.

The November issue of the LABOUR GAZETTE, on page 1382, contains an article on the growth of trade unionism since 1913, taken from the *International Labour Review*. The members of trade unions in thirty countries are there esti-

mated to number 48,029,000. In the December issue of the *International Labour Review* revised figures are given which place the total at 48,600,000, later information having been received from Austria, Japan, Poland, South Africa and the United Kingdom. The latest figures for these countries are Austria, 900,820, Japan, 110,688, South Africa, 132,784, United Kingdom, 8,502,000.

The Labour portfolio

On December 29, the Honourable Gideon D. Robertson, who had been the Minister of Labour since November 7, 1918, resigned office with the other members of the Administration and he was succeeded by the Honourable James Murdock.

The new Minister of Labour, like his predecessor, had for many years taken an active part in the trades union movement, and was up to the time of his appointment Vice-President and Chief Canadian Executive of the Brotherhood of Railroad Trainmen, an office he had held since 1905, save for the period during which Mr. Murdock served as a member of the Board of Commerce, September, 1919, to June, 1920, when he resigned from the Board of Commerce and resumed his former work. The Honourable Mr. Murdock resigned his office in the Brotherhood on December 30, the day following his appointment as Minister of Labour. The retiring Minister, Honourable Senator Robertson, had been, it will be recalled, prior to his appointment as a member of the late Government, a Vice-President and Chief Executive Officer in Canada of the Order of Railroad Telegraphers, his appointment to the Senate of Canada dating from January, 1917.

Minister of Labour urges early signing of wage agreements

The Honourable James Murdock, Minister of Labour, issued an appeal on January 6 to employers and employees in Canada to give early consideration to their agreements for the present year respecting wages and working conditions in order to pre-

vent as far as possible any wastage of working days that might otherwise occur during the coming spring and summer months. The Minister's appeal was as follows:

"The Labour Department of the Dominion government cannot be successful in performing its intended functions without the co-operation and assistance of Canada's citizenship, both employer and employees.

"Conditions in years gone by, and especially during the past year, have indicated the misfortunes incident to delaying the making of agreed understandings between employer and employee, and this has been more particularly in evidence, and detrimental to the public interests in many parts of Canada, in connection with the building trades. The year 1921 saw, in many cases, weeks of spring or summer weather wasted, because agreements as to wages or terms of employment had not been reached between those representing the employers' committees and the various classes of building trades workers in certain cities and other localities.

"The Minister of Labour requests the earnest co-operation of all of Canada's citizenship at the present time, to the end that an earnest effort may be put forth by employer and employee, especially in the building trades, between now and not later than March 31, to secure agreed understandings as to wages and conditions, so that prompt movement in the direction of creating and maintaining business activity during the spring and summer months of the present year may obtain.

"The department does not assume to determine for employer or employee what their agreements as to wages or conditions should be, but does urge as a public duty that employer and employee should reach common mutually satisfactory ground of agreement prior to March 31, so as to ensure that valuable outside working weather during the spring and summer months may not be wasted.

Canada needs, must have, and will have, co-operation between employer and employee."

Workmen's compensation in Ontario in 1921

According to a preliminary statement issued by the Workmen's Compensation Board of Ontario there were 45,191 accidents reported to the Board in 1921, as against 54,851 in 1920, a decrease of 9,660. The fatal accidents decreased from 452 to 386. The daily average was 151 accidents reported in 1921, as against 183 in 1920. The compensation awarded during 1921 amounted to \$5,526,519, as against \$7,076,439 during 1920, a decrease of \$1,549,920. The high figures for 1920 were partly owing to the retroactive increase in death pensions under the amendments of that year. The amount paid by the Board for medical aid during 1921 was \$662,793, as against \$703,705 in 1920. This made the total benefits awarded during 1921 \$6,189,313, as against a total of \$7,780,145 in 1920. The average daily number of cheques issued by the Board during the year was 485, and the benefits awarded averaged \$20,631 per day.

Fur farms in Canada during 1920

The Dominion Bureau of Statistics has issued a report on fur farms of Canada during 1920. These statistics are collected annually with the co-operation of Provincial Game Departments. According to the report, the fur farms in Canada in 1920 numbered 587, comprising 578 fox farms, six mink, two raccoon and one Karakul sheep. The value of the fur-bearing animals on the farms at the end of the year was \$4,722,905, the value of silver foxes alone being \$4,536,417. The total number of animals on the farms at that time was 16,529 including 13,694 silver foxes and 1,480 other varieties of foxes. The only other animals kept in large numbers were Karakul sheep of which there were 1,100 on the one farm devoted to them, valued at \$80,000.

The total value of fur-bearing animals sold from fur farms during the year 1920 was \$763,221. This total comprised \$750,123 realized from the sale of silver foxes; \$12,913 from patch and other foxes; and \$185 from other fur-bearing animals. Taking for each farm the average selling value, silver foxes are shown to have ranged from \$100 to \$1,100 each. The total value of pelts sold from fur farms in 1920 was \$388,335, the main item being silver fox skins with a total value of \$373,140. Average prices per farm for silver fox pelts ranged from \$75 to \$750.

The farms devoted to fur-bearing animals other than foxes appear to be still in an early stage of development, as only 3 live mink and 36 mink pelts were sold, 108 mink and 4 raccoons having been killed for pelts. None of the other animals including skunk, fisher, marten and Karakul sheep were either killed or sold.

Statistics of United States industries for 1919

A preliminary statement, subject to revision, containing a summary of manufacturing industries in the United

States for 1919 has been issued by the United States Bureau of the Census. There were in all 290,168 establishments employing an average of 9,103,200 wage earners. The invested capital amounted to \$44,985,958,000; the cost of materials, \$37,372,534,000; and the value of products, \$62,910,202,000. The greatest industrial state was New York in which there were 49,374 establishments employing 1,229,900 wage earners with capital of \$6,033,852,000, using materials of the value of \$4,947,991,000 and having a product of \$8,875,007,000. The state of Pennsylvania ranked next with 27,977 establishments employing 1,137,100 wage earners, with a total capital of \$6,227,268,000, materials costing \$4,212,347,000, and products to the value of \$7,312,333,000.

British pro- posal to make industrial agreements legally binding

At a recent meeting of the Association of Joint Industrial Councils and Interim Industrial Reconstruction Committees in Great Britain, the question was raised of making agreements negotiated by Joint Industrial Councils legally binding on the trade concerned. Twenty-five Councils were in favour of amended legislation to this end and two were against, and it was thereupon decided to communicate further with those Councils who had not declared their policy, and later, if a majority of the Councils approved the proposal, to send a deputation to the Minister of Labour pressing him to take steps to meet their request. The meeting also resolved to request the Minister to issue an instruction to contracting departments of the government that they should recognize, for the purpose of the Fair Wage Clause, such rates of wages as were agreed upon by the Joint Industrial Councils.

Seasonal labour in the building industry

The Boston section of the National Congress of the Building and Construction Industry has presented a report on Seasonal Labour in the Building Industry accompanied by a series of charts showing the amount of employment per month in an average year. The report states that "certain elements helping to create the peaks of employment are subject to adjustment.... We believe that a thoughtful study by owners of their maintenance and repair work, in the light of this chart, will suggest possible re-arrangement of many items of work so as to remove them from the high-peak period and place them in the period of general unemployment with a very definite benefit to the owner as well as to Labour and the industry as a whole." The charts refer to organized labour and involve some 26,500 men; if unorganized labour were added the total would probably be at least 36,500 men. They indicate that "in a normal year there is about enough work, in total, to

keep 75 per cent of the men steadily employed, or, in other words, all the men in the industry are, on an average, idle for about 25 per cent of the time, or 3 months each year." The trades which are shown to be busy in winter are steamfitters, elevator constructors, electricians, sheet metal workers, and asbestos workers. All the other trades are busy in summer. Elevator constructors and sheet metal workers are the most steadily occupied, showing only 25 per cent unemployment at the low peak. Painters and decorators, while they have the longest busy season, have the sharpest drop to 75 per cent unemployment for three months. They also report that the largest proportion of their work is maintenance or repair work, 60 per cent. Owners, architects, engineers, and contractors are urged to take advantage of the opportunities for better service offered by the low peak periods of employment.

Trade schools established by Texas employers

Owing, it is stated, to the action of the trade unions in limiting the number of apprentices, and the alleged resulting scarcity of skilled mechanics in many lines of industry, the Employers' Association, Texas, U.S.A., has established an organization for training boys in various trades. The Association has two schools at Dallas, a bricklaying and a baking school. At the latter the boys do the baking and a local hotel has agreed to take the entire output. The boys at the bricklaying school are sent out on small jobs of laying sidewalks, steps, etc., until they can do better work. One half of the money received for the work at both schools is given to the boys. The Association proposes to start schools of tanners, plumbers, painters, paperhangers, electricians, printers, pressmen, and other callings. Employers are invited to support the schools, the plan being for each employer to subscribe a stated sum for three years when it is believed that all the schools will be self-supporting.

Demand for 44-hour week refused in Australia

Recent press despatches state that the Australian Commonwealth Court of Arbitration has rejected the demand of the combined trades unions for the reduction of the standard working week throughout Australia from 48 hours to 44 hours. The president of the court, in announcing the decision stated that such reduction of hours would greatly add to the ranks of the unemployed and would also seriously affect the Australian industries, which, if the demand for a 44-hour week were granted, would be unable to compete successfully with the industries of other countries.

"Chamber of Labour" at Bremen, Germany

The senate of the free city of Bremen, by an act of July 17, 1921, has created what is stated to be Germany's first Chamber of Labour. The Chamber is composed of two sections, one for manual and the other for non-manual workers, and is organized along the lines of the works councils. It has 30 members elected by general, equal, direct and secret ballot on the system of proportional representation. All workers over 18 years of age are entitled to vote, and all workers over 24 years of age are eligible for election. It is provided that at least 20 members of the Chamber must be actually manual or non-manual workers, after which officials of trade unions are eligible for election. The affairs of the Chamber will be managed by a chairman, vice-chairman and treasurer with the aid of a jurist as permanent adviser. The Chamber will deal with the economic and cultural interests of the workers of Bremen, to the exclusion of all political questions. It is planned to appoint trade committees to handle problems relating exclusively to isolated groups, which committees will report to the plenary assembly in order to secure final decisions. The cost of the Chamber will be defrayed in principle by the State. If the expenses exceed a sum set aside for this purpose in the budget, trade union organizations

will be called upon to contribute in proportion to their membership. It is stated that experience derived from the working of this Chamber will be utilized to perfect the scheme of economic councils provided for in the Weimar constitution, and at present under discussion in the Provincial Federal Economic Council.

International Building Trades Congress

A congress of the International Federation of employers in the Building Trades met at Brussels, Belgium, on October 18, 1921. There were present about 50 delegates representing organizations in Belgium, France, Great Britain, Italy, the Netherlands, Switzerland, Spain and the United States. The congress expressed the hope that the 8-hour day would be suspended in the countries where it was already in force, and that it would not be adopted in those countries which still had it under consideration, until the international situation had been stabilized; it urged employers' associations to impress upon their governments that any application of the law to open-air industries such as building and public works should take the whole year as the time-basis for calculating hours. The congress declared itself in favour of the standardization and simplification of building, and of increasing the number of skilled workers in the industry by encouraging vocational training. A resolution was adopted to the effect that national organizations affiliated to the International Federation should collect all information concerning emigration and immigration of labour; this should be transmitted to the permanent office of the Federation so as to be available in the course of any negotiations; meanwhile, reciprocal labour conventions should be adopted by those countries where they were still wanting, in order to improve the recruiting of labour. The congress also declared itself absolutely opposed to compulsory profit-sharing, although admitting that under certain circumstances profit-sharing had its advantages and was a means of establish-

ing cordial relations between men and management.

Juvenile Affairs law of South Africa

The new Juvenile Affairs Act of South Africa, passed in 1921, is described in a recent

Educational Supplement of the *London Times*. It states that the Act is the result of experience gained by juvenile advisory boards set up about five years ago in large towns for vocational guidance work. These boards, which were on a voluntary basis, have now been placed on a statutory basis. The new law requires school principals to report to the board each term all pupils who, before the beginning of the following term, will be for any reason beyond the reach of the compulsory education law. A common form of card record is to be used which will epitomize the school history of each pupil. Provision is made for the compulsory registration by employers of all juveniles taken into employment or discharged. The boards hope thus to secure a national register of juveniles. It is part of their plan to organize a thorough survey of occupations. In this way the future demand for juvenile labour may be anticipated, and facilities provided for the training of young workers in accordance with the estimated demand in each occupation. The boards emphasize the importance of an organized system of continuation schools.

Unemployment relief measures in Switzerland

On September 30, the Federal Council of Switzerland issued a decree providing for unemployment relief, modifying a decree of October 29, 1912. By the latter, assistance was granted both for total and partial unemployment, the cost of relief being covered by grants from the Federal Government, the cantons and communes and by contributions levied upon the employer. In the case of total unemployment the amount of relief granted is 60 per cent of the normal earnings, or 70 per cent where there are legal dependants. Unemploy-

ment relief must not be paid as a rule for more than 60 working days in a year. The new decree provides for the granting of subsidies to enterprises that owing to the depression would otherwise be compelled to close down, upon the following conditions: (a) that the continued employment of workpeople who would otherwise be dismissed shall thus be assured; (b) that, without the subsidy, the enterprise would be working at a loss; (c) that the total amount of the subsidy shall not exceed the sum which would otherwise have to be paid to the staff as unemployment relief; (d) that the subsidy shall be refunded in any case where this is justified by the results. The cantons were also authorized to make it compulsory for unemployed persons in receipt of assistance to attend technical or other school courses; to substitute relief in kind for part of the relief in cash; and where justifiable to increase from 60 to 120 days the period during which relief may be paid in one year.

**Unemployment
policy of
Swedish
government**

The Swedish cabinet which took office on October 12 adopted a programme for dealing with the unemployed which was proposed by M. H. Lindqvist, Minister for Social Affairs. The Minister stated that the number of unemployed in Sweden which was about 60,000 last June had risen to about 100,000. Of this number about 40,000 were receiving assistance either in the form of unemployment relief or at relief works. "Evidently for industry as well as in the interest of the workers," he said, "it would be preferable if those who are now given employment on relief works could be given employment in their own trades. This especially applies to such groups of highly skilled workers as, for instance, in the mechanical engineering industry, iron works and certain other important branches of industry, who are at present unemployed. The granting of state subsidies to private industrial undertakings, as has been proposed, does not seem to me to be advisable. In my

opinion, industry should be supported by means of state orders even in cases where the time for such an order does not appear to be advantageous to the state from the business point of view, but where it is certain that by a reasonable sacrifice on the part of the state during the near future a considerable amount of labour can be found for skilled workers. The government should, by letters to various state departments, request them to send in as soon as possible proposals as to the measures to be taken in this direction."

**Plans for un-
employment
relief in
Belgium**

On October 8, a delegation of the Trades Union Commission of Belgium were received by the Premier of Belgium and the Minister of Labour for the purpose of discussing the unemployment situation. The delegation stated that in spite of some improvement there were still several hundred thousand workers out of employment. They demanded that the work of the National Emergency Fund be continued; that the construction of public works be accelerated; that control of certain industries be established, particularly those producing building materials, and that these industries should be compelled to continue their normal output on reasonable terms; that the resumption of economic relations with other countries, including Russia, should be encouraged; and that the food supply departments which had been abolished should be re-established. The premier replied that the National Emergency Fund would continue to function as long as the crisis lasted; that the Government desired to accelerate the execution of public works; and that it would examine favourably suggestions concerning the control of the building industries. With regard to export trade, he stated that credits to the amount of 250,000,000 francs had been voted as a guarantee of success, and if these experiments succeeded the Government would continue to act on the same lines. He promised to consider the re-establishment of certain food supply

departments if it did not entail fresh financial sacrifices for the state.

Bill concerning labour conditions of domestic servants in Germany

A bill concerning the labour conditions of domestic servants in Germany has been submitted to the Federal Economic Council and will be discussed shortly by the Socio-Political Commission of the Council. The bill comprises 46 clauses regulating the rights and obligations of domestic servants under the contract. It provides for the introduction of a system of identity cards for servants, regulates the conditions of employment of charwomen, etc., and finally contains provisions for inspection and penalties in case of infringement of the law. Domestic servants are defined as persons forming part of a household who execute work in the household of their employer, or for members of this household under a labour agreement, provided that this work is not an occupation within the meaning of the Insurance Act for non-manual workers. The following are, however, excluded: persons engaged also in agricultural work who do not belong to the household itself, or whose work in the household is merely subsidiary to another occupation which is their chief means of subsistence. The bill prohibits the employment of children

under 14 years of age as domestic servants. The central federal authorities may prescribe that the labour agreement shall be in writing. Persons employed in hospitals and sanatoria do not come within its scope. The bill does not fix a limit for the hours of actual work but limits the number of hours on duty to 13 consecutive hours a day, subject to the proviso, however, that the worker shall be entirely free from 3 p.m. on one day every week, and on two Sundays within every period of 4 weeks, also a week's holiday should be provided after 9 months' service. The other clauses of the bill relate to the identity card, notice of dismissal, etc. The work of charwomen and similar workers is regulated differently. According to the bill this category includes all persons engaged solely on domestic work, but not forming part of the household itself. The hours of work of this class of workers must not exceed 56 hours a week. Hours of work must be so arranged that the worker has normally 10 consecutive hours of rest per day, and in the case of workers under 18 years of age, 11 hours a day. Children below 14 must not be employed for more than 3 hours a day, and not before 7 a.m. or after 7 p.m., nor before school hours. The employment of children under 12 years of age is prohibited.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

I.—The Labour Market, Strikes, Prices

The Labour Market

THE volume of employment as reported by employers showed a decided contraction during December, while the actual reductions made in staff during the month were less pronounced than those recorded at the same time in the preceding year, nevertheless conditions generally were not as favour-

able as in 1920. More unemployment was recorded by trade unions at the beginning of December than in November and there was little difference between the situation reported for the month under review and that which obtained in December, 1920. There continued to be marked declines in the business transacted by the offices of the Employment Service during November,

the number of applicants registering, placements made, and vacancies notified by employers all showing considerable reductions.

Weekly reports from employers to the Dominion Headquarters of the Employment Service of Canada

EMPLOYERS' REPORTS for the period November 20 to December 17

indicated further substantial losses in employment, the index number having declined by approximately four per cent during the four weeks. As compared with the corresponding period in 1920 the situation continued to be decidedly unfavourable; the index number in this comparison showed a decrease in the middle of December of almost twelve points. Logging operations and retail trade recorded considerable expansion during the four weeks under review, while pronounced shrinkage was again reported in sawmills and in railway construction and maintenance, supplemented by important losses in shipping and stevedoring, railway transportation, coal mining and building construction. Employment in all districts declined largely, but the contractions in Quebec, Ontario and the Prairie Provinces, which involved the release in each district of between 5,000 and 6,000 persons, were especially pronounced. Conditions in all provinces were decidedly less favourable than during the corresponding period of 1920.

Retail trade recorded large increases in activity, a reflection of Christmas buying, and the seasonal expansion in logging continued, although it was on a somewhat smaller scale than during the periods recently reviewed in the LABOUR GAZETTE. Improvement continued to be registered in the employment afforded in boot, shoe and leather, and pulp and paper factories. Additions to staffs were made also by firms producing rubber footwear and in the mining of metallic ores. In all these industries the favourable movement was particularly marked in Ontario and Quebec, but the Prairie Provinces also indicated increased employment in some groups. Approxi-

mately 8,300 persons were released from employment by the construction and maintenance departments of the railways during the four weeks under review, the contraction being especially noteworthy in the Prairie provinces and Ontario. Sawmills continued to release large numbers of workers from employment, although the declines were scarcely as pronounced as during the last two periods previously reviewed. The closing of the summer ports affected adversely employment in the shipping and stevedoring group as a whole, but the re-opening of the winter ports provided work for many workers in the Maritime provinces. In the food group, fruit and vegetable canneries showed further marked losses in employment, supplemented by reductions in staff in chocolate, sugar and confectionery factories. A distinctly downward movement was evidenced in the employment afforded in the iron and steel group; the shrinkage in the crude, rolled and forged division was particularly marked, but there were also large reductions in payroll in shipyards and general machinery plants. Less activity was indicated in coal mining in Nova Scotia, although some improvement was again registered in Alberta. Further declines on a larger scale occurred in the employment afforded in railway transportation, and street and electric railways were less busy. Seasonal contractions were widely reported in building construction, while highway construction also showed a substantial decline. The first unfavourable movement that has been indicated in the textile industries since July was reported during the period under review, when there was a falling-off in the employment afforded, mainly in factories producing men's and women's clothing. Textile factories continued to be busy. Decreases on a smaller scale than those mentioned above were recorded in several other branches of the manufacturing group, notably in abattoirs and meat-packing plants, tobacco, cement, lime, electrical apparatus and soap factories.

Although the contractions recorded in most groups during the four weeks under review as mentioned above, were less extensive than those reported at the same time in the preceding year, the situation generally continued to show considerable depression when compared with 1920. Greater activity was again recorded in the leather, edible plant, shipping and stevedoring, street and electric railway and highway construction groups. Very pronounced losses in that comparison occurred in the iron and steel, pulp and paper and non-ferrous metal groups. The volume of employment afforded in logging was scarcely as great as during 1920, while railway and building construction, trade, and mining continued to show considerable contraction.

Unemployment as reported by trade unions at the beginning of December showed the first increase it has registered since April, there being approximately 4 per cent more unemploy-

TRADE
UNION
REPORTS

ployment than at the beginning of November. The increase in idleness for the period under review was the largest that has been shown for any month of 1921, and was of practically the same magnitude as that recorded at the beginning of December, 1920. (Unemployment as used here has reference to involuntary idleness due to economic causes; persons occupied in work other than their own trades, or who are idle because of sickness, or as a direct result of strikes or lockouts are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to those unions reporting.) The decrease in activity as compared with the preceding month was due largely to slackness among garment workers in Quebec, though the mining, transportation and construction trades also were less busy.

All provinces reflected less favourable conditions than at the beginning of November, but Quebec, with 10 per cent less employment, showed the greatest contraction. The percentages of unemployment recorded in all provinces, except Ontario, also exceeded those registered for December of 1920, while in that district the improvement was merely nominal. In this comparison the Prairie provinces showed relatively more slackness than was reported elsewhere.

Returns were tabulated from 1,506 unions whose membership aggregated 164,107 persons, 18,151 of whom were out of work at the beginning of December, a percentage of 11.1 as compared with 7.4 in the preceding month and with 10.2 at the beginning of December, 1920. In the manufacturing and mechanical industries, as a whole, there was a decline in the volume of employment as compared with the preceding month, due to less activity for tradesmen in textiles, carpets and cordage, clothing, pulp and paper, woodworking and furniture, and boots and shoes. The situation among workers in metals, machinery and conveyances showed very little change. Unions in the manufacturing industries continued to report considerable short time. In the transportation group there was 3.4 per cent of idleness as compared with 2.7 per cent at the beginning of November. This decrease in employment was accounted for by slackness among steam railway employees, especially trainmen and road maintenance men. Navigation workers, also, registered smaller percentages of employment. Street and electric railway employees and teamsters and chauffeurs, on the other hand, were more fully engaged than in the preceding month. The situation among asbestos miners in Quebec and coal miners in the Western provinces was practically the same as in the preceding month, but conditions in the Nova Scotia coal fields were less favourable. Many miners in both Eastern and Western coal fields continued to work only a few days a week. Less employment was reported by tradesmen in building and construc-

tion, the percentage of idleness being 17.8 as compared with 12.7 at the beginning of November. All provinces recorded marked slackness in this group, but the percentages of unemployment in the four Western provinces were larger than elsewhere. Plumbers and steam fitters and steam shovel and dredgemen were somewhat more fully employed, while all other tradesmen in the group reported less activity. Fishermen in British Columbia registered considerable slackness. On the other hand, lumber workers and loggers in the same province were busier. Retail clerks, barbers, theatre employees, and stationary engineers and firemen reported a somewhat less favourable situation than in November, but hotel and restaurant employees were more fully engaged.

The volume of business transacted by the offices of the Employment Service of

EMPLOYMENT	October 24 -- November
OFFICE	19, 1921, showed a con-
REPORTS	siderable reduction
	when compared with

both the preceding period and the corresponding period of last year. Although the figures showed some fluctuations from week to week, there was a general downward tendency during the period under review, and during the week ended November 12, placements reached a level lower than at any time since the establishment of the Employment Service. Loss of time due to the Thanksgiving and Armistice Day holidays, however, accounted to some extent for this sharp decline. During the last week of the period under review a slight recovery was shown by all reports. Contractions were noted in the number of positions offered by employers, there being approximately thirty-five per cent fewer vacancies reported than during the preceding period, and about eighteen per cent less than during the corresponding period of 1920. The marked decrease as compared with the previous four weeks may be attributed largely to a falling-off in the demand for harvesters and thresher

hands at the close of the harvesting season in the Prairie provinces. There was, also, a substantial reduction in the number of placements effected in regular employment during the period of approximately forty per cent from the report of the preceding period, and about forty-eight per cent from the report of the same period of last year.

During the four-week period ended November 19, 1921, the offices of the service reported that they had made 21,829 references to regular positions, and that 13,767 placements (11,538 of men and 2,229 of women) were effected. Placements reported during the preceding four-week period numbered 22,996 and during the corresponding period of 1920 they totalled 26,895. In addition to the above, 6,043 placements were made in casual employment (one week or less) as compared with 7,386 during the preceding period and 6,218 during the same period of last year. During the period under review, employers notified the service of 23,485 positions (of which 16,929 were for men and 6,556 for women). Vacancies notified during the preceding period numbered 36,089 and during the period ended November 20, 1920, a total of 28,899 vacancies were reported. Applications for employment during the period under review totalled 34,149 (27,130 from men and 7,019 from women) as compared with 41,299 applicants registered during the preceding four-week period, and 38,588 applications during the same period of 1920.

	Employment in the building trades,
	as indicated by the value of the building
	permits issued in 56
BUILDING	cities, showed an in-
PERMITS AND	crease during November
CONTRACTS	as compared with Oc-
AWARDED	tober; the value rose
	from \$9,248,469 in the
	latter month to \$10,958,066 in Novem-
	ber, a gain of \$1,709,597 or over 18 per
	cent. In comparison with the returns
	for November, 1920, which had totalled
	\$5,362,549, there was an increase of \$5,-
	595,517, or more than 104 per cent. The

greater part of the expansion in both comparisons occurred in the province of Quebec, where the issuing of permits for the construction of several large buildings caused the total value for the province to show percentage increases of 146 and 599 over October, 1921, and November, 1920, respectively. All other provinces reported considerable declines when compared with the October figures. In Nova Scotia, Ontario and Alberta the value of the permits issued during the month under review exceeded that issued during November of last year, but elsewhere there was less anticipated activity. Of the larger cities, Montreal alone (with permits valued at over six million dollars) indicated substantially more estimated building than in October, while Toronto, Winnipeg and Vancouver showed reductions. As compared with the corresponding month of last year, Montreal, Toronto and Vancouver showed increases in the building authorized, but in Winnipeg there was a decline. Of the smaller cities, Sydney, St. Catharines, Sarnia, Windsor, Lethbridge and Victoria recorded gains in both comparisons.

According to the *Canadian Building Review* issued by MacLean's Building Reports, Limited, the value of the contracts awarded during November amounted to \$16,639,800 as compared with \$18,997,200 in October, 1921, and with \$15,399,200 in November of last year. Ontario and Quebec together reported \$15,101,100 or approximately 91 per cent of the November total, the Maritime District awarded contracts valued at \$342,300 and in the four Western provinces the contracts totalled \$1,196,400. Of the November total, \$7,503,200 was to be expended on residences, \$3,873,300 on business buildings, \$1,160,700 on industrial establishments and \$4,102,600 on engineering contracts.

Strikes

The loss of time on account of industrial disputes during December was less than during November, but greater than during December, 1920. There

were in existence at some time or other during the month 17 strikes, involving about 2,883 workpeople with a time loss of 64,733 working days, as compared with 18 strikes, 3,950 workpeople and 98,099 working days in November, 1921; and 14 strikes, 1,822 workpeople and 20,324 working days in December, 1920. On December 1, there were on record 16 strikes affecting 2,733 workpeople. One strike was reported as having commenced during December. One of the strikes commencing prior to December was reported terminated, leaving 16 strikes, involving about 2,458 workpeople on record at the end of the month.

Prices

The general movement in prices during December was comparatively slight. The index number of wholesale prices was slightly up while the average retail cost of food was slightly down.

The average cost in sixty cities of a family budget of twenty-nine staple foods was \$11.00 at the beginning of December as compared with \$11.08 for November, \$14.84 for December, 1920, \$14.73 for December, 1919, \$13.65 for December, 1918, and \$7.96 for December, 1914. The chief changes for the month were seasonal increases in eggs and butter with decreases in meats and nearly all the other items included. Fuel and rent were practically unchanged. The cost of food, fuel and rent was \$21.49 at the beginning of December as compared with \$21.60 for November, \$25.87 for December, 1920, \$23.49 for December, 1919, \$21.64 for December, 1918, and \$14.26 for December, 1914. In December, 1921, food was 50 per cent above prices for 1913; fuel was 81 per cent; rent, 45 per cent; clothing, 73 per cent; and sundry items, 80 per cent; all items averaging 61 per cent above 1913 prices.

In wholesale prices the index number of 271 commodities was slightly higher at 230.7 for December, as compared with 227.3 for November, 290.5

for December, 1920, 322.7 for December, 1919, 288.8 for December 1918, and 137.6 for December, 1914. The principal changes for the month were increases in fodder, animals and meats, dairy pro-

ducts, fruits and vegetables, miscellaneous metals, and raw furs, with decreases in textiles, iron and paints and oils. As compared with December, 1920, all groups were lower except raw furs.

II.—Industries and Trades during December, 1921

Logging

FURTHER advances were made during the month in the employment afforded in logging camps, although the gains were not as pronounced as those recorded earlier in the season. Ontario operators continued to show the greatest expansion, but Quebec firms also were busier. Towards the latter part of the month, however, the camps at River Desert and La Tuque employed slightly smaller staffs, while there were no changes at St. Jovite Station, Three Rivers, Louiseville and several other centres. In Ontario large numbers of men were again dispatched to Upper Ottawa points; there was also more activity at Blind River and Nesterville, while employment at Braeside and Pembroke remained stationary. On the other hand, camps at Haileybury and Fort Francis showed some curtailment in operation. Employment in logging in British Columbia continued to decline slightly, particularly at Alert Bay. Information respecting the month of November which was not available for insertion in the December issue of the LABOUR GAZETTE, shows that timber of all species scaled in British Columbia in that month totalled 143,714,315 feet. The quantity of Red Cedar scaled was larger than that of other species and with Douglas Fir formed more than 70 per cent of the total.

Mining

Mining afforded a great deal less employment during December than in November, largely on account of reduced activity in the Nova Scotia coal fields. At Glace Bay there was important curtailment of operations, the mines at Sydney were also less busy. At Little Bras d'Or, Joggins Mines, Stellarton, Springhill, and Westville, however, slightly larger staffs were employed, while no change was noted in the situation at Inverness. The mines at Minto, N.B., afforded practically the same volume of employment as in November. In Alberta, the changes were mainly small, although there were rather substantial declines in staff at Drumheller and Coleman. At Blairmore, Commerce, Edmonton, Nordegg and Taber there were slight increases in activity, while a considerably larger staff was employed at Brule Mines. Metal mining in Ontario remained practically on the same level as during November. Gold mining at Timmins showed improvement, but at South Porcupine and Schumacher the situation was somewhat less favourable. There was a slight increase in employment at Cobalt. The nickel mines at Copper Cliff were not as busy, while the mines at Coniston showed no changes in staff. There was further slight improvement in asbestos and chrome mining in Quebec, particularly at Asbestos, Black Lake and Coleraine. Salt mining at Amherstburg, Ont., showed less activity than in November. Gold mining at Stewart, B.C., showed expansion. Copper, silver, gold, and zinc mining at Trail, Rossland, and Britannia Beach in the

same province also afforded more employment, while there were nominal declines at Anyox and Surf Inlet.

Manufacturing Industries

The food group afforded considerably less employment during December than in the preceding month.

FOODS, This decline in activity
TOBACCO AND was due to continued
LIQUORS curtailment of canning operations and to reductions in sugar and confectionery establishments.

The sugar refineries at Dartmouth, N.S., continued to be partly shut down and employed a smaller staff than in November. Chocolate manufacturing at Halifax was at a lower level than in the preceding month. Employment in the sugar refineries and in the chocolate and confectionery plants at St. John and St. Stephens, N.B., respectively, was in lesser volume than in November. The province of Quebec also showed decreased activity in the manufacture of food. At Montreal, however, confectionery production was somewhat brisker than in November, but biscuit and candy making showed some curtailment. Sugar refining employed a smaller number of persons, while flour mills maintained practically the same staffs as in the preceding month. Reduced activity was widely reported in Ontario. At Brantford, London and Toronto, losses were recorded in the manufacturing of biscuits, confectionery and chocolates, although some of the declines were on a small scale. Minor decreases in employment occurred in flour and other cereal mills at Keewatin and Port Colborne. Canning and preserving factories also were less busy, particularly at Leamington. An important contraction was reported in the production of starch at Fort William. In Manitoba there was a slight gain in activity, mainly at Winnipeg, in the manufacture of flour, but confectionery establishments in the same centre showed curtailment. Sugar refining in Vancouver, B.C., employed practically the same staff as in November. Some shrinkage was reported in the employment

afforded in meat packing plants at Hull, Que., and similar establishments in Montreal were considerably less busy. Dairying at Ottawa and Toronto remained steady as regards employment. Meat packing at Toronto, on the whole, showed curtailment, although some firms reported increases. The situation in this industry at Peterborough remained unchanged. In Manitoba contraction was reported in meat packing plants at Winnipeg. There was also less activity at Calgary and Edmonton, Alta. Tobacco manufacturing in Montreal showed considerable curtailment at the end of the month, although part of the losses was due to temporary shutdowns for inventory-taking and repairs. At Farnham, and Quebec city, however, there were minor gains in the employment afforded in this industry. Distilled and malt liquor manufacturing in Montreal was slightly busier. The tobacco factories at Hamilton, Ont., employed considerably smaller staffs than during November. Distilled liquor production at Walkerville remained practically on the same level as in the preceding month.

Considerable shrinkage was reported in the employment afforded in the iron and steel industry during December partly on account of numerous shutdowns in locomotive and other shops for holiday and inventory purposes. The rolling mills at New Glasgow, N.S., showed very small changes in staff when compared with November, although a slight upward tendency was in evidence. Railway car manufacturing in the same centre was at a standstill, the factories still being closed down. Shipbuilding and repairing in New Glasgow also was at a very low level; the shipyards at Halifax, moreover, continued to report curtailed operations. At Sydney and Sydney Mines steel furnaces and rolling mills employed smaller staffs than during the preceding month, although some improvement was noticeable towards the latter part of December. Boiler and engine manufacturing at

Montmagny, Que., was less active than during November. Steel foundries at Longue Point were partly shut down at the end of December, although they were working during the greater part of the month. At St. John's sewing machine production showed some contraction. Fire arm manufacturing at Brownsburg and Quebec was slightly more active than in November, particularly in the former centre. Steel shipbuilding in the province of Quebec was, on the whole, on a lower level than during November; at Montreal and Three Rivers there were large contractions in employment, while at Sorel the situation remained practically unchanged. The closing of the locomotive and car shops in Montreal over Christmas and the New Year released large working forces from employment temporarily. Rolling and forging mills, foundries, machine, engine and boiler shops, and sheet metal plants in the same city reported considerable curtailment. The manufacture of small hardware, on the other hand, was slightly busier. Agricultural implement production at Terrebonne was at a lower level than during the preceding month. Practically no change was reported in the employment afforded in tool shops at Rock Island, general plant machinery factories at Sherbrooke and in iron and steel fabrication plants at Lachine. Machinery shops at Galt, Hamilton and Toronto, Ont., reported almost the same situation as in the preceding month. Iron and steel fabrication at Walkerville employed a somewhat smaller working force than in November, but the same industry at Hamilton reported some expansion. In the latter centre wire manufacturing declined to some extent. Steel furnaces in Hamilton, on the whole, employed fewer workers, increases in one establishment not being sufficient to counterbalance losses in personnel in another. The railroad shops at London, Ottawa, Hamilton, Kingston, Stratford, and Toronto were wholly or partially closed over Christmas and the New Year, although earlier in December they had employed practically their ordinary

working force. Shipbuilding at Kingston, Midland and Port Arthur showed further curtailment in operations. Agricultural implement plants at Brantford, Hamilton, Toronto and Smith's Falls reported increases, but there were decreases in staff at Orillia. Engine and boiler manufacturers on the whole reported reduced activity, there being slight declines at Brantford and Toronto. Some expansion occurred in the employment afforded in foundries and machine shops at Oshawa, but at Brantford and Toronto the situation was less favourable than in November. Small hardware factories at Brockville were somewhat busier, but at Hamilton and Ingersoll there were minor reductions in staff. Automobile manufacturing, on the whole, employed larger working forces than for several months past, improvement being reported at Ford, Oshawa, St. Catharines and in some Walkerville factories. One plant at Walkerville, however, showed considerable fluctuation in employment and at the end of the month it was employing only about ten per cent of its November staff. At Windsor and Chatham also there was slightly less activity. The production of heating appliances at Guelph and London eased off to some extent, but there was a minor increase in employment at Toronto. Iron pipe factories at Guelph were considerably less busy. The rolling mills at Sault Ste. Marie registered contraction, while the same industry at Toronto employed a somewhat larger working force than in November. Firms producing stamped and enamel ware in Toronto were busier than for several months. Forging mills at Oshawa and Swansea were not as fully employed as in November. In Manitoba there was also less activity in the iron and steel industry on the whole; the rolling mills at Selkirk reported only about thirty per cent of its November staff and there was also a drop in production in structural iron and steel fabrication at Winnipeg. Ship building in British Columbia showed a further falling off at Vancouver, while the situation in Victoria remained unchanged.

Manufacturers of copper articles at Montreal employed larger working forces at the end of December than during November, although in the early part of the month their

NON-FERROUS METAL

staffs were considerably reduced. Firms producing brass, bronze and copper goods in the same city reported varying conditions, increases in some establishments being offset by declines in others. Jewellery manufacturing at Montreal employed more workers than in the preceding month, but at Sherbrooke there was less activity in such factories. Tin and aluminum factories at Maisonneuve and Shawinigan Falls respectively were busier. The production of brass, bronze and copper articles at Hamilton, Toronto and Sarnia, Ont., was in greater volume than during November. Nickel refining at Copper Cliff and Port Colborne showed a falling off. Aluminum factories in Toronto employed larger staffs, and silverware manufacturing in the same city remained on the same level as in November. At Anyox, B.C., slight improvement occurred in copper smelting and refining.

Further improvement was recorded in the leather group during December, although the expansion

LEATHER AND RUBBER PRODUCTS

was hardly as pronounced as in previous months. Boot and shoe manufacturers in Montreal almost without exception, employed larger staffs than in November. There were also increases in employment in the same industry at Quebec and St. Hyacinthe. Harness and saddlery makers in Montreal, however, were somewhat less busy. In Ontario the situation was more favourable also, footwear factories at Galt and London reporting larger working forces than during November. Tanneries at Toronto and London, on the other hand, showed some falling off in production, though there was a slight improvement in the situation at Kitchener. Rubber manufacturing was somewhat more active than in the preceding month. Rubber footwear factories at

Granby and St. Jerome employed more help than in November. The production of fountain pens at Montreal eased off somewhat. In Ontario there was further expansion, some increases in employment being reported in rubber footwear establishments at Guelph, Merritton and Kitchener. Tire factories at Guelph and Kitchener also showed expansion, but at Toronto there was a minor drop in production. Firms manufacturing rubber and elastic goods at Toronto and Bowmanville employed more help than for several months.

Contraction continued to be registered in the lumber group during December,

LUMBER PRODUCTS

although the declines in employment in sawmills were somewhat less pronounced than in October and November. At Plaster Rock, N.B., there was a minor gain in employment at the sawmills. In the province of Quebec rather slight declines were recorded in sawmills at St. Pâcome, Sayabec, Breakeyville, Quebec, and Hull, but at Montreal and Sorel increased activity was indicated. Furniture factories at Beauharnois and Cowanville reported no change in the situation. In Ontario the reductions in sawmills were on a larger scale than elsewhere. At Arnprior, Fort Francis, Pembroke, Rockland and Keewatin there were considerable decreases in activity. Box and container manufacturing at Toronto also declined, and furniture manufacturing at Brantford and Stratford eased off to some extent. At Newmarket the furniture industry employed a slightly larger number of persons. There was no change in the employment afforded in the manufacture of sporting goods in Toronto. Carriage manufacturing at Chatham and Orillia was on a slightly lower level. The production of washing machines and wringers at London was in somewhat lesser volume than in November. Sawmilling operations at The Pas, Man., were considerably curtailed. Contractions in lumber mills were indicated also in British Columbia, particularly at Fraser Mills,

Golden and Vancouver. Practically no change in the situation was reported at Chemainus and Wardner. Musical instrument manufacturing at Montreal afforded slightly more employment, and some establishments at Toronto were busier. Other large factories in the latter center, however, reported temporary shutdowns over the Christmas season.

A more favourable movement was indicated in the pulp and paper group than in the preceding month, there being increased activity, particularly in the early part of December. In Nova

Scotia more employment was afforded in paper mills at Liverpool, but at Murray there was a decline in the number of workers employed. In New Brunswick there was a downward tendency, large reductions being indicated at Bathurst, Chatham and St. John. Firms in the province of Quebec also showed some curtailment of operations. At Three Rivers, Cap Magdelaine and Bagotville the reductions were particularly large, but, on the other hand, slightly improved conditions were indicated at Hull, Chicoutimi, East Angus and La Tuque. In Ontario some expansion was indicated especially at Cornwall, Ottawa, Iroquois Falls, Sturgeon Falls and Smooth Rock Falls. At Sault Ste. Marie and Thorold, however, the downward tendency was in evidence in the employment afforded in paper mills. Printing and publishing at Toronto also reported less activity. Improvement was indicated in printing and publishing in Winnipeg, although some firms were hardly as busy as in November. In Saskatchewan printing shops in Regina and Saskatoon maintained practically the same staffs as in the preceding month. In Alberta there was a minor increase in the employment afforded by some firms at Edmonton, but Calgary reported a slight falling off in the printing business. In British Columbia the situation in paper mills remained station-

ary, declines in activity at Ocean Falls being very largely counterbalanced by increases at Powell River. Printing and publishing at Vancouver and Victoria showed improvement.

The textile industries were somewhat quieter during December than in November, some branches of the trade being affected slightly by between season inactivity

TEXTILE PRODUCTS

and holidays. Cotton manufacturing in New Brunswick afforded more employment, mainly at Marysville and Milltown, while at St. John there was a minor reduction. A more favourable situation was indicated in cotton and knitting factories at Yarmouth and Truro, N.S. In Quebec province considerably more employment was reported in cotton mills at Montreal, Sherbrooke, Three Rivers, Magog, Montmorency Falls and Valleyfield. Thread manufacturing at Montreal showed a small increase in production and at St. John's there was more activity. Woollen mills at Sherbrooke reported a minor decline in employment, while the silk goods factories in the same centre reported practically the same staff as in November. The production of felt goods at Lachute Mills was somewhat quieter. At St. Hyacinthe there was a slight contraction in the employment afforded in knitting mills. Corset manufacturing at Quebec showed a considerable falling off towards the latter part of the month, the factories being partially closed down. Earlier in December however, practically the same staffs as in November were employed. In the garment industry varying conditions were reported in Montreal; some manufacturers of women's clothing were a great deal busier, but there were slight declines in employment in other factories. Men's clothing establishments in the same centre were decidedly slacker, as were also men's furnishings factories at St. John's. In Ontario also the situation on the whole was somewhat less favourable. Cotton mills at Hamilton in some instances were busier, but in

others there were temporary shutdowns over Christmas and the New Year. At Welland there was a falling off in production in cotton goods, but at Cornwall there was a minor increase in activity. The woollen factories at Toronto afforded more employment; the same is true also for Hespeler and Peterborough. On the other hand, the Almonte woollen mills indicated slightly smaller staffs than in November and at Preston the factories were partially closed. Contrary tendencies were evidenced by manufacturers of knitted goods in different centres. At Toronto there was a decided falling off in production due to some extent to partial shutdown over the holidays; at Hamilton, on the other hand, considerably more activity was indicated. The Brantford, Galt and Dunnville knitting mills were less busy, but more favourable conditions were indicated at Paris, while at Woodstock the situation remained unchanged. Men's garment factories at Toronto maintained practically the same staffs as during November; at Hamilton however a temporary shutdown released from employment a large number of men's clothing workers. Some curtailment of staffs was indicated in this trade at London. Men's furnishing factories at Toronto and Kitchener also were less busy. The same was true also of women's clothing factories in Toronto. Carpet makers at Guelph and Toronto employed larger staffs. The production of bedding in the latter city was at a lower level than in November. Practically no change was indicated in conditions among cordage workers at Brantford, but at Welland this industry was less busy. Garment factories at Edmonton, Alta., absorbed a rather larger number of persons than during the preceding month.

Oil refineries at Montreal maintained the same staffs as during November. At Dartmouth, N.S., Sarnia, Ont., and Ioco, B.C., however, there were increases in employment in oil refineries. There was a slight fall-

ing off in carbide production at Welland, Ont. Cyanamid factories at Niagara Falls, however, were busier. At Toronto the manufacture of baking powder afforded considerably less employment. Explosive manufacturing at Montreal eased off somewhat. There was also a decline in the production of paints and varnishes in the same centre. At Toronto soap factories were closed down, partly for inventories, at the close of December. Light, heat and power plants at Montreal were considerably less busy although some improvement was indicated towards the latter part of the month. In Ontario electric current plants also employed more help, particularly at Toronto. At Winnipeg such establishments were not as busy as in November. On the other hand, at Vancouver electric companies added to their payrolls. Electrical apparatus manufacturing at Montreal was more active than in the preceding months. Ontario firms on the whole, however, indicated contraction although there was increased activity at St. Catharines. The declines were particularly pronounced at Hamilton and Toronto, while the Stratford factories showed only a minor reduction in employment. Glass manufacturing at Montreal employed larger staffs in December than for several months past. Cement factories in the same city reported a large contraction in employment. Minor gains in production were indicated in glass manufacturing at Hamilton and Toronto, but an insignificant reduction occurred at Wallaceburg. At Port Colborne and Belleville smaller staffs were recorded by cement plants than in the preceding month.

Construction

The Canadian Pacific, Grand Trunk, and Canadian National railways again reported considerable contraction in the employment afforded on railroad construction, including maintenance of way. At the end of December they had over 7,700 fewer men in their working forces than at the end of the preceding month.

The declines were particularly large at the beginning of the month under review, but they were reported in greater or lesser degree each week in December. The Canadian Pacific Railway released approximately 4,500 persons from employment; the Canadian National Railways employed 3,000 fewer workers while the Grand Trunk Railway let out 250 men. Quebec and Ontario suffered especially heavy losses, but practically all districts shared in the decline.

Employment as indicated by the value of the building permits issued in 56 cities showed an increase during November as compared with October, the value having risen from \$9,248,469 in the latter month to \$10,958,066 in November, an expansion of over 18 per cent. The most decided gains occurred in Quebec Province. Contractors in every section of the country, with very few exceptions, employed considerably smaller staffs. In Nova Scotia decreases in the number of persons engaged on construction work were reported at Halifax and other centres. In New Brunswick there was also less activity particularly in St. John. In the province of Quebec, Montreal and Sherbrooke firms as well as those in other cities also reduced their staffs. In Ontario slightly increased activity occurred at Windsor, but all other centres, notably Toronto, Hamilton, London and Kingston, afforded less employment in building. Public highway construction in Ontario also released a large number of men. The downward tendency evidenced by employment in construction in the eastern centres was noted also at western points.

Transportation

The gross earnings of the Canadian National Railways during December were \$8,475,328 as compared with \$10,742,852 in November. Information respecting the month of November, which was not available for insertion in the December issue of the LABOUR GAZETTE, shows that the earnings of the Canadian Pacific Railway during November were \$18,-

787,679 as compared with \$22,089,624 in the preceding month and with \$23,799,146 in November, 1920. During December the number of persons employed by the Canadian Pacific, Grand Trunk and Canadian National railways in operation, including general offices, trainmen, engine crews, station employees, sleeping, parlour and dining car employees reported a net decline of approximately 2,700 workers. The Canadian National Railways released practically 1,600 of these persons, the Canadian Pacific Railway let out over 850 workers, while the Grand Trunk Railway employed over 200 less persons than in November. All provinces except the Maritimes shared in these losses, those in the Prairie provinces and Ontario, however, being especially pronounced. Electric railways also were less busy than in the preceding month, notably in Montreal and Toronto, though there was also a decline in employment on a smaller scale in Ottawa, Winnipeg, Calgary and Edmonton. At Vancouver and Victoria, however, slightly more activity was indicated. Longshore and stevedoring work at Quebec and Ontario ports showed a considerable falling off, but the opening of the winter ports in the Maritime provinces caused employment in that section of the country to be greatly improved.

Trade

The usual Christmas expansion was evidenced in retail trade during December, although some establishments did not increase their working forces as largely as usual and towards the end of the month there was a considerable falling off in activity. Enlarged working forces were reported in stores in Montreal, Toronto, Ottawa, Vancouver and Winnipeg. Other centres in many instances indicated gains on a smaller scale. Wholesale trade continued to afford slightly less employment, particularly in Montreal.

INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907

Proceedings for the month of December, 1921, with texts of Boards' Reports

DURING the month of December the Department received reports from three Boards established to deal with disputes between (1) the Algoma Steel Corporation, Sault Ste. Marie, Ont., and certain of its employees, being engineers, firemen, conductors and brakemen; (2) the British Columbia Electric Railway Company, Limited, and certain of its employees, being motormen, conductors, shopmen, etc., members of Local Divisions Nos. 101, 109 and 134, Amalgamated Association of Street and Electric Railway Employees of America, and (3) the International Transit Company, Sault Ste. Marie, and certain of its employees, being motormen, conductors, barn employees and interlocker signalmen, members of Local Division No. 850, Amalgamated Association of Street and Electric Railway Employees of America.

One application was received for the establishment of a Board and further appointments were made in connection with an application which was received during November.

Application Received

During the month of December an application was received for the establishment of a Board of Conciliation and Investigation from the employees of the Dominion Coal Company, Nova Scotia Steel and Coal Company and the Acadia Coal Company, the leading coal mining

companies of Nova Scotia, being members of District No. 26, United Mine Workers of America. A Board was established composed as follows: Mr. U. E. Gillen, Toronto; Colonel W. E. Thompson, Halifax; and Mr. James Ling, New Waterford, N.S. The employing companies are members of the British Empire Steel Corporation, and, having failed to name a person for appointment to the Board, Colonel Thompson was, on December 27, appointed by the then Minister of Labour, Honourable G. D. Robertson. Messrs. Thompson and Ling, being unable to agree on a chairman, Mr. Gillen was appointed on January 6, by the Honourable James Murdock, who had a few days previously assumed the portfolio of the Department of Labour in succession to the Honourable Mr. Robertson.

Other Proceedings under the Act

During the month of December, Mr. W. F. O'Connor, K.C., Ottawa, was appointed chairman of the Board established to deal with the dispute between the Hull Electric Company and certain of its employees, being members of Division No. 591, Amalgamated Association of Street and Electric Railway Employees of America. The appointment was made by the Minister in the absence of a joint recommendation from the other two Board members, Messrs. Kelley and Bancroft.

Report of Board in Dispute between the Algoma Steel Corporation, Sault Ste. Marie, and its engineers, firemen, conductors and brakemen.

A REPORT was received from the Board established to deal with the dispute between the Algoma Steel Corporation and certain of its employees, being engineers, firemen, conductors and brakemen. The Board was composed as follows: Mr. W. E. Segsworth, chairman, and Messrs. J. E. Irving and U. E. McFadden, nominees of the company and employees respectively. Mr. James Murdock, who was first nominated by the employees as their representative on the Board found it necessary to resign and Mr. McFadden was appointed in his stead. The report was signed by the chairman and Mr. McFadden, and contained certain recommendations as to settlement of the dispute. It also expressed favour of the company's decision to reduce the wages of their employees in view of the reduction which had been reported in the cost of living. Mr. McFadden, while signing the report, added a note dissenting on the latter point. Mr. Irving, although concurring substantially with these findings, presented a minority report.

Report of Board

Sault Ste. Marie, Ontario,

December 19th, 1921.

Honourable G. D. Robertson,
Minister of Labour,
Ottawa.

Sir:—

The Board of Conciliation and Investigation appointed by you in the matter of a dispute between the Algoma Steel Corporation, Limited, and certain of its employees, being engineers, firemen, conductors and brakemen (hereinafter called the transport workers), was convened at Sault Ste. Marie, Ontario, on the afternoon of December 15th, 1921.

There appeared before the Board, George K. Wark, representing the men, and J. D. Jones, representing the Company. A. R. Kerr, E. DeCourcy and M. S. Lowry also gave evidence for the men.

Two public and several private meetings of the Board were held on December 15th, 16th and 17th.

Both parties appearing before the Board were in agreement regarding the facts and showed every disposition to give the Board all the information in their possession bearing on the case. They also discussed the various phases of the dispute in frankness and good temper, but no agreement could be arrived at.

The facts appear to be as follows:

On November 1st, 1920, the following agreement was entered into between the parties to this dispute:

Algoma Steel Corporation Limited,
November 1st, 1920.

MEMORANDUM REGARDING RATES OF PAY FOR ENGINEERS, FIREMEN, CONDUCTORS AND BRAKEMEN EMPLOYED IN THE TRANSPORTATION DEPARTMENT.

The wage rates of Engineers, Firemen, Conductors and Brakemen in the Transportation Department will remain the same as those paid to similar classes employed in the Algoma Central Railway Yard at Sault Ste. Marie.

The rates of the above classes of employees in the Transportation Department will be changed as the rates of similar men in the Algoma Central Yard at Sault Ste. Marie are changed, any such changes becoming effective on the first day of any month in which these changes may be decided by the Algoma Central Railway or the Canadian Railway Wage Board.

Straight time will be paid for all time worked in excess of the usual working hours up to 12 hours, and time and a half will be paid for time worked in excess of 12 hours, although if at any time during the period of this agreement any general change in the system of pay for overtime should be made as affecting a majority of the men employed in other departments

of the Plant, any such general change will apply also to Engineers, Firemen, Conductors and Brakemen in the Transportation Department.

The usual hours of work will be as may be mutually arranged from time to time, it being the intention that the present 8 hour basis be continued.

This agreement is to remain in effect for a period of one year from November 1st, 1920, that is, to November 1st, 1921.

ALGOMA CENTRAL CORPORATION, LIMITED.

(Sgd.) C. E. DUNCAN,
General Superintendent.

(Sgd.) JNO. J. BURKE,
Sup't. Transportation.

For the Trainmen:

M. S. LOWRY
A. R. KERR
H. HUGHES
J. McMILLAN
E. DECOURCY
T. SMITH

Early in January, 1921, the plant being closed down for lack of orders, the officials of the company had a general meeting with the men and explained that in order to get business they would have to lower the price of their product, and if they were to operate without loss they would have to make an all round cut in wages of 17.6 per cent. Failing this the plant would have to remain shut down. The majority of the men with whom there was no agreement agreed to the cut. Some of the transport workers were at the meeting but took no part in it.

Early in January, 1921, however, and before the 22nd, the transport workers held several meetings with Mr. Duncan and Mr. Burke. At these meetings the men protested against the cut, but were told that if they did not accept, the plant would remain closed. They finally went to work but delivered to Mr. Duncan and Mr. Jones in person a protest in writing of which the following is a copy:

Sault Ste. Marie, Ontario,
January 22nd, 1921.

We, the undersigned trainmen and engineers, who signed Memorandum regarding rates of pay for engineers, firemen, conductors and brakemen, employed in the Transportation De-

partment of the Algoma Steel Corporation, Limited, on the 1st of November, 1920, hereby submit the following offer:

In order to permit the continuance of the Corporation's operations we agree to accept temporarily the proposed reduced rate of wages for the Transportation employees, viz., 17.6 per cent without prejudice to our rights under said Memorandum bearing date the 1st November, 1920, and signed by C. E. Duncan, General Superintendent, and John J. Burke, Superintendent Transportation.

FOR THE TRAINMEN:

M. S. LOWRY
A. R. KERR
H. HUGHES
J. McMILLAN
E. DECOURCY
T. SMITH

The result of these meetings with the men was that on January the 22nd there was a general cut in wages of 17.6 per cent which included the transport workers.

About the middle of March the plant shut down owing to lack of orders. In April the Company was negotiating for a definite order and called a general meeting of the men and informed them that if the Company were to take the order offered they would have to make another general cut of 10 per cent, and left it with the men as to whether the Company should accept the order at the reduced price and start the plant or remain shut down. The transport workers were at the general meeting. The men agreed to accept the cut, the transport workers protesting but not in writing.

The plant started May 1st, 1921, under the 10 per cent cut, the transport men going to work with the others.

On the first day of September another cut of 10 per cent was made. There was no general meeting with the men previous to this cut, but the men were consulted in groups through their foremen and the officials of the Company. The transport workers again protested in writing, but kept on working at the reduced wage.

The rates of pay and the working conditions were not altered during the period November 1st, 1920, to October 31st, 1921, on the Algoma Central Railway.

During the month of September the transport workers applied to the Minister for a Board of Conciliation and Investigation. So much for the facts.

The Company justifies its actions on the grounds:

(1) That the actions of the men in going to work and the terms of the letter of protest constituted a consent on their part to a cancellation of the contract.

(2) That if the plant were to run without loss the general cuts made were necessary and that the best interests of the men and the community at large would be served by making the cut, notwithstanding the agreement with the transport workers.

(3) That it was unjust to reduce the pay of the majority of the men who had no agreement without reducing the pay of the transport workers who had an agreement.

The transport workers maintain:

(1) That the agreement was broken without their consent.

(2) That "consideration should be given to the matter of whether or not a reduction in wages is justifiable at this time and under existing circumstances."

As to the first contention of each of the parties it is not the function of this Board to construe the exact legal rights of the parties, but it seems clear from the evidence that the men believe the agreement was in force up to October 31st, 1921.

As to the second contention of each of the parties, evidence produced before the Board justifies the opinion that the Company could not operate without a loss unless the reductions were made. Consideration has been given as to whether a reduction was justified at this time and under the existing circumstances, and the Board is of the opinion that, in view of the decrease in the cost of living as shown by figures recently published by the Ontario Government and the Department of Labour at Ottawa, and in view of the falling prices of the product of the steel plant, the reductions

would be justified as apart from the agreement.

The third contention of the Company appears to be unsound as the existence of the agreement differentiated between the majority of the men and the transport workers.

The transport workers ask for back pay under the agreement, being the difference between the wages actually received by them respectively during the period between the 22nd day of January, 1921, and October 31st, 1921, and what their wages would have been for the time during which they worked, under the rates provided for in the agreement.

Every effort was made to bring the parties to an agreement and suggestions made to both parties, but without any result. After the last sitting of the Board the representative of the men offered to accept in settlement an amount less than their full claim under the agreement, but without prejudice to their full rights under the agreement if their offer was not accepted. The Company maintained that they did not owe the transport workers any part of their claim.

In considering what settlement the Board could recommend, the Board observes that the agreement terminated on October 31st, 1921, and the men ask for their contractual rights under the agreement. In view of these facts the Board is of the opinion that this dispute is of such a nature that the parties should appeal to courts competent to settle their respective rights as a matter of law.

(Sgd.) W. E. SEGSWORTH,
Chairman.

(Sgd.) URIAH MCFADDEN.

Uriah McFadden joins in this report with the exception that he is of the opinion that the decrease in the cost of living at Sault Ste. Marie particularly has not been such as to justify the reduction of wages made by the employers.

(Sgd.) URIAH MCFADDEN.

Minority Report

Toronto, Ontario,
Dec. 22nd, 1921.

Honourable G. D. Robertson,
Minister of Labour,
Ottawa.

Sir:—

Circumstances over which I had no control called me away from Sault Ste. Marie after all the evidence had been heard in the matter of the dispute between the transport workers in the mills of the steel plant of Algoma Steel Corporation, Limited, and the Corporation. Before leaving it was arranged between the chairman of the Board and the members that the Board would convene at Toronto in the absence of Mr. McFadden for the purpose of considering the Board's report.

At the adjourned meeting to-day at Toronto, I have had the opportunity of reading the report signed by the chairman and my brother member, Mr. McFadden, and of discussing the matter further with the Chairman.

I concur substantially with the statement of facts as set out in the majority report of the Board, and absolutely concur in the opinion that a Court of Law is the proper tribunal to determine the rights of the parties in a dispute such as we have before us in this matter.

But dealing with the matter on its merits, I have reached the conclusion that the claim of the employees should be denied.

I am of the opinion that a Board of Conciliation, when enquiring into the dispute "and into the right settlement thereof," should do so quite independent of the legal rights of the parties under agreements in somewhat the same manner as the Board of Railway Commissioners determine what is a "reasonable rate", and the Railway Board has held, in several cases, that in that enquiry existing agreements between the parties are not to be considered. (See C.P.R. Co. and Spanish River P. & P. Mills vs. Algoma Eastern R. Co.—C.R.C. Decision, Vol. 8, No. 785.)

Dealing with the dispute in this matter on this basis I am of the opinion that the several cuts in the rates of wages complained of were *per se* just.

However, if agreements should be considered, I am of the opinion that the employees have no just complaint, for the reason that they expressly agreed to accept the said several cuts in the rates of wages. It will be observed, respecting the agreement of November 1st, 1920, that it imposed no obligation on the Company to keep the plant running, nor to pay the men during shut-downs. This agreement was modified in respect of the rate of wages by the writing dated 22nd January, 1921, signed by the representatives of the transport workers and impliedly consented to by the Company in keeping these men at work, copy of which writing is incorporated in the majority report of this Board. In that writing the men say "in order to permit the continuance of the Corporation's operations we agree to accept temporarily the proposed reduced rate of wages for the transportation employees, viz., 17.6 per cent without prejudice to our rights under said Memorandum bearing date the 1st November, 1920." This writing cannot be construed to mean that the men did two such inconsistent things as to accept the reduced rates for any period, and at the same time reserved their right to the higher rates for the same period. It is clear that during whatever period of time is embraced in the meaning of the word "temporarily" as used in the writing, the men were entitled to only the reduced rate of wages. The word "temporarily" is a relative word and may embrace almost any period of time according to the circumstances. I construe the writing to mean that the men, because they contemplated the conditions might change for the better, reserved to themselves the right to notify the Company, if and when such improved conditions did take place, that their acceptance of the reduced rate was at an end, and that thereafter they would demand the higher rates. As this reservation was conditional on improved conditions, the right of notification

never accrued, as conditions got worse instead of better, moreover, the men, by verbally notifying the Company, at the time of the cut in May, that they would continue to work under the terms of the writing above referred to, and again in September by their similar writing, impliedly notified the Company, in my opinion, that they did not consider that the time embraced in the meaning of the word "temporarily" had expired.

I conclude therefore that the men, having expressly agreed to accept the reduced rate, "in order to permit the continuance of the Corporation's operations" or, in other words, in order that they themselves might have employment, have no just complaint on the merits.

(Sgd.) J. E. IRVING,
Member of Board.

Report of Board in Dispute between the British Columbia Electric Railway Company, Limited, and its motormen, conductors, shopmen, etc.

A REPORT was received from the Board established to deal with the dispute between the British Columbia Electric Railway Company, Limited, and certain of its employees, being motormen, conductors, shopmen, etc., members of Local Divisions Nos. 101, 109 and 134, Amalgamated Association of Street and Electric Railway Employees of America. In this case the application was received from the company. A Board was established composed as follows: Mr. E. C. Ditmars, chairman, and Messrs. A. G. McCandless and R. P. Pettipiece, nominees of the company and employees respectively. The report was signed by the chairman and Mr. McCandless and expressed the opinion that the company was justified in reducing the wages of their employees. Certain recommendations were made concerning changes in working conditions. Mr. Pettipiece did not concur in these findings and presented a minority report. Advices received show that the findings of the Board were not agreeable to both parties, but negotiations were re-opened and an adjustment effected.

Report of Board.

In the matter of the Industrial Disputes Investigation Act, 1907, and of differences between The British Columbia Electric Railway Company,

Limited, and The Amalgamated Association of Street and Electric Railway Employees of America, represented by Local Division No. 101, of Vancouver, British Columbia, Local Division No. 109, of Victoria, British Columbia, and Local Division No. 134, of New Westminster, British Columbia, comprising employees of the various departments of the British Columbia Electric Railway Company, Limited.

To the Honourable Gideon Robertson,
Minister of Labour,
Ottawa.

Sir:—

The Board of Conciliation and Investigation appointed in the above matter, consisting of Mr. W. C. Ditmars, Chairman, and Mr. A. G. McCandless (employers), and Mr. R. P. Pettipiece (employees), begs to submit the following report:

The Board met first on November 8th, 1921, when the company was represented by Mr. W. G. Murrin, Assistant General Manager, and Mr. Wm. Saville, General Secretary of the Company, while Mr. W. H. Cottrell, Mr. F. A. Hoover and others appeared for the men.

After the members of the Board had been sworn in by J. W. Prescott, J. P., Mr. Murrin gave a general outline of the dispute, and, as it was apparent to

the Board that it would be impossible to get the two parties to the dispute together, they proceeded at once to take evidence.

Regular sittings of the Board, at which all members were present, were held on the following dates: November 8th, 9th, 10th, 11th, 15th, 16th, 17th, 18th, 19th, 21st, 22nd, 24th, 25th, 26th, 28th, 29th, and 30th.

There was an adjournment from the 11th to the 15th of November, to allow the men further time to prepare their defence.

According to records in our hands, the company made application for the appointment of a Board of Conciliation and Investigation on October 4th, for the purpose of considering the following points:

- (1) Proposed reduction of fifteen per cent in wages.
- (2) Wages and conditions governing the operation of one-man cars.
- (3) Abolition of extra payment to motormen and conductors, for Sunday and holiday work.
- (4) Amendment of working conditions of agreement, dated 5th November, 1919.

The question of the reduction of wages being considered the most important point at issue, it was decided to deal with that first. The company submitted a vast quantity of data, charts, etc., and sought to show that they were justified in asking for the said fifteen per cent reduction in wages for the following reasons:

- (1) That the cost of living, as shown by the *Labour Gazette*, had fallen from \$25.72 in October of 1920, when the last adjustment of wages was made, to \$20.67 in October of 1921, a decrease of 19½ per cent.
- (2) That, as former wage adjustments and increases had been based on the increase in the cost of living, then wages should be lowered as the cost of living is decreased.

- (3) That the wage rates at present paid by the company are higher than those generally paid by other street railway companies.
- (4) That the wage rates at present paid by the company are higher than those paid in other trades in this province for a similar class of labour.
- (5) That wages generally in this province have been reduced within the last year from twenty to forty per cent.

The men opposed any reduction being made in wages at the present time, claiming that, while living costs had decreased, they were still little or no better off than in pre-war times, when the purchasing power of their money was so much greater; that they were still receiving little more than a living wage, and that they had established a higher standard of living which should not be altered. Their contentions were supported by considerable evidence consisting of charts and statements.

The hearing of the evidence was completed on November 22nd, 1921, and, after due consideration, the Board found that it was impossible to come to a unanimous decision on the question of wage reduction. A majority of the Board, however, were of the opinion that the company was justified in asking for a fifteen per cent reduction, but they did not agree that so drastic a cut should be made at this time. They felt that any reduction necessary should be made as easy as possible for the men, and that they should keep pace as nearly as possible with the rate increases made previously. They are, therefore, prepared to recommend that a general reduction of ten per cent (10%) be made on all wages, except as hereinafter mentioned, as and from December 1st next.

In arriving at this decision, we have taken the following factors into consideration and have based our findings accordingly:

- (a) Supply and demand.

- (b) The decrease in the cost of living.
- (c) Wages paid locally for a like class of labour.
- (d) Wages paid street car employees in other Canadian cities.

SUPPLY AND DEMAND:—We find that, while there is a great deal of unemployment in the city and locality at the present time, the company is restricted to some extent from going into the open market for its employees, on account of its agreement with the association or union. On this account, the law of supply and demand does not govern to a great extent.

DECREASE IN COST OF LIVING: — We believe that the company has established beyond a doubt the fact that there has been a very considerable reduction in the cost of living, not only in Vancouver, but throughout the whole of Canada. According to the *Labour Gazette*, the peak of living costs was reached in June of 1920, since when there has been a steady decline until August of this year, when there was a slight upward tendency. The net decrease during the period between June, 1920, and October of this year, amounts to twenty-seven per cent (27%). We also availed ourselves of certain local information, and satisfied ourselves that the general tendency of prices of all food commodities, fuel and wearing apparel, is downwards, and we believe that the purchasing power of the dollar has risen during the last year by at least twenty per cent.

WAGES PAID LOCALLY FOR A LIKE CLASS OF LABOUR: — Statements and evidence submitted by the company, as well as a certain amount of local information gathered by the Board, convince us that the general trend of wages is downward, and that other industries in this city are paying a considerably lower scale of wages for all classes of labour, from skilled mechanics downward to common labour.

WAGES PAID STREET CAR EMPLOYEES IN OTHER CITIES:—The evidence submitted went to show that motormen and conduc-

tors employed by the company were with one or two minor exceptions, receiving the highest wages paid anywhere in Canada, the rates paid in Eastern Canada being much lower than paid here, while the cost of living in eastern cities is somewhat higher.

Taking all of the above points into consideration, and weighing carefully all the evidence submitted by both parties, we are of the opinion that the company is justified in asking for a reduction in wages, and we beg to recommend as above.

TRAIN DESPATCHERS:—We also beg to recommend that no change be made at present in train despatchers' salaries, and that they remain as provided for in supplementary agreement effective October 1st, 1920. The duties of these men are most exacting and they are charged with grave responsibilities, and we feel that the present salaries are not too high for the services rendered.

We further recommend that the following alterations be made in working conditions set forth in agreement between the Association and the men, dated 5th November, 1919, and supplementary agreement, effective 1st October, 1920, viz.:—

WAGE SCHEDULE.

Section 2 (d):—This subsection to be amended to read as follows:

All work done on Sundays to be paid for at the rate of time and one-quarter. Holidays at the rate of time and one-half.

This refers to wages of motormen and conductors who are now paid for Sunday and holiday work at the rate of time and one-half, and, while we recommend as above, we do not wish to be understood as favouring the principle of extra pay for this class of work. We are firmly of the opinion that all such work necessary to the operation of an industry required to give continuous service, where men are regularly assigned by bulletin to work on Sundays and holidays, should be compensated on the same

basis as on week days. We feel, however, that as the men have been paid at time and one-half for this work since 1918, we would hardly be justified in removing this additional emolument at this time, especially in view of the fact that time and one-quarter is allowed in some other eastern cities. We, however, are opposed to the principle as set forth above.

*Section 2 (e) :—*This subsection to be amended to read as follows:

Extra men to be guaranteed a minimum monthly earning of eighty-seven dollars and fifty cents (\$87.50).

Under present working conditions, extra men are guaranteed six hours work per day. It has been shown to us, however, that it is an arrangement that is hardly equitable, in that a man may earn high wages for say five days a week, and he is still entitled to a six-hours pay on the sixth day whether or not he earns it. We think that the principle of a minimum wage for the month is more just and equitable, and that it affords the men ample protection.

SPREAD-OVER.

Section 39 :— This section to be amended by striking out twenty-five cents (25c.) on the third line and substituting therefor ten cents (10c.). The amended section will then read as follows:

In the event of a run not being completed within ten hours of the commencement of the first shift, all such overtime shall be paid for at the rate of 10 cents per hour in addition to work pay, the Company agreeing to complete runs within the following times:—

- 50 per cent within 9 hours.
- 10 per cent within 9½ hours.
- 20 per cent within 10 hours.
- 10 per cent within 11 hours.
- 10 per cent within 12 hours.

This has regard to the spread-over clause which now provides that motor-men and conductors shall receive twenty-five cents per hour in addition to their regular pay, when a run is not com-

pleted within ten hours of the commencement of the first shift. We feel that twenty-five cents per hour is too heavy a penalty to enforce upon the Company for something which cannot be avoided. It has been shown to us that there are some runs which cannot be completed within ten hours; both the Company and the men have assured us that the running sheets are worked out in such a way that this spread-over is reduced to a minimum, and, while the Company has agreed to keep the eighty per cent (80%) of its runs within ten hours, we feel that an additional ten cents (10c.) per hour for this spread-over is a fair remuneration to the men.

REPORTING TIME.

*Section 24 (c) :—*This subsection to be amended to read as follows:

Conductors making relief on the road, shall be paid travelling time according to schedule running time from the nearest office to relief point, and from relief point to the nearest office.

In making this recommendation, we feel that the extra box time provided for in this section is not justified under present working conditions.

HOURS OF WORK.

*Subsection 87 (d) :—*This subsection to be amended by the addition of the following:

Except that the extra pay shall not apply to shifts starting before five (5) p.m.

We may say that it was made quite plain to us that under the present wording of this subsection, certain inequalities arose, and we feel that this slight alteration removes any misunderstanding, and makes this subsection more definite.

*Section 87 (e) :—*This subsection to be amended to read as follows:

All overtime to be paid at the rate of time and one-half, except that when men are required to work more than five hours overtime, after

having already worked eight hours at straight time, they shall be paid double time for all time worked in excess of such five hours. Time and one-half will be paid for all work done on Sundays, holidays and Saturday afternoons.

REPORTING TIME.

*Section 24 (f) :—*This subsection to be eliminated entirely.

RECOGNITION OF ASSOCIATION.

*Section 3 :—*This section to be amended by adding the following :

Shop and barn men, however, not to attain seniority rank until three months have elapsed from date of entering employ.

LEAVE OF ABSENCE.

*Section 8 (a) :—*This subsection to be amended by adding the following :

Upon application to the official in charge.

CONCESSIONS.

*Section 14 (e) :—*This subsection to be amended by adding the following :

Except on District 3, where they will not be good on Sundays and holidays.

OVERTIME.

*Section 117 :—*This section to be amended to read as follows :

All overtime to be paid for at rate of time and one-half, except that when men are required to work more than five hours overtime, after having already worked eight hours at straight time, they shall be paid double time for all time worked in excess of such five hours. If called out before regular time of starting in the morning, to receive time and one-half until such regular time of starting. Time and one half will be paid for all work done on Sundays, holidays and Saturday afternoons.

ONE-MAN CARS.

In the event of the Company operating one-man cars on any part of their system, we recommend that the men so operating them be paid at schedule rates plus ten per cent (10%). We make this

recommendation for the reason that it has been shown to us that on these cars the man's duties will be more exacting and his responsibilities greater, and, as it will likely call for some of the best men the Company have, we feel that they should be recompensed accordingly.

All of which is respectfully submitted.

(Sgd.) W. C. DITMARS,
Chairman.

(Sgd.) A. G. McCANDLESS,
for the Company.

Dated at Vancouver, British Columbia,
this 30th day of November, 1921.

Minority Report

Vancouver, B. C.,
December 5th, 1921.

The Honourable Gideon Robertson,
Minister of Labour,
Ottawa.

Sir :—

Re Board of Conciliation British
Columbia Electric Ry. Co., vs.
Employees.

I must dissent from the decision reached by the other two members of the Board.

Simply because the employees of the British Columbia Electric Railway Co. Ltd., were driven to strike, in sheer desperation, through the increased cost of living, in 1918, and compelled to plead these grounds as the primary reason for so doing, in no way establishes the principle that because men can live for less they should work for less.

But even if that hypothesis were accepted, which I do not admit, the purchasing power of wages received in pre-war days as compared with today, according to *Labour Gazette* statistics, is so infinitesimal that there is no warrant or foundation for such a sweeping reduction as proposed by the Company or that conceded by the other members of

the Board. It is merely a question of viewpoint. However sincere (and this is conceded) the Chairman, it must be remembered that his life viewpoint and environment has been that of an employer.

To speak of supply and demand when discussing what wages should be is to at once associate human beings with such commodities as rails, electric equipment, track-grease or junk.

To suggest that wages are higher in Vancouver than elsewhere, for similar classes of work, is nothing new. It has always been so.

To compare the employees of the British Columbia Electric Railway Co. Ltd., with employees' wage-cuts in other industries of the Province is grossly unfair.

Most of the other industries mentioned have either closed down altogether or in part. There is no business. Not so, however, with the British Columbia Electric Railway Co. Ltd. During the stress of war-times this Company secured increased fares, eliminated the jitney, has prevented even the City itself introducing an omnibus system, and,

in short, has secured a complete monopoly of a continuous business, a bigger and better business than it had in 1918. All other commodities have been reduced in price. But the Company demands more, even at the expense of lowering the standard of living of its employees.

Assuming, for the sake of argument, that increased cost of living preceded increased wages and that, *per se*, decreased cost of living should be followed by decreased wages, it should, at least, be in the same inverse ratio, and, on the law of averages, the most the Company should hope to secure under such circumstances would be a five per cent (5%) reduction.

This, with the revised working conditions would mean a total reduction of around twelve per cent (12%). That would have been an ample reduction for the Board to make at this time.

With this conclusion the Chairman does not agree. I therefore cannot be a party to the majority report.

Respectfully submitted,

(Sgd.) R. P. PETTIPIECE.

Report of Board in Dispute between the International Transit Company, Sault Ste. Marie, Ont., and its conductors, motormen, barn employees and interlocker signalmen.

A REPORT was received from the

Board established to deal with the dispute between the International Transit Company, Sault Ste. Marie, Ont., and certain of its employees being conductors, motormen, barn employees and interlocker signalmen, members of Local Division No. 850, Amalgamated Association of Street and Electric Railway Employees of America. The Board was composed as follows: Reverend Father T. J. Brennan, chairman, and Messrs. J. L.

O'Flynn and E. V. McMillan. The report was unanimous and was accompanied by an agreement signed by both parties to the dispute.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of differences between The International Transit Company and certain of its employees, being Conductors, Motormen, Barn Employees, and Interlocker Signal Men.

Sault Ste. Marie, Ontario,
November 30th, 1921.

The Honourable G. D. Robertson,
Minister of Labour,
Ottawa.

Sir:—

The Board of Conciliation in this matter, as authorized by you, held meetings at Sault Ste. Marie, Ontario, to investigate the matters in dispute between the International Transit Company, and certain of its employees. The Board are very happy to report that the best of feeling, throughout, existed between the men and their employers, and the Board were called upon to act as a Board of Conciliation, rather than a Board of Arbitration. The Board are pleased to report that an amicable agreement was arrived at through the offices of the Board, without the Board having to make any definite ruling on any of the points involved, and you will find attached to this report a copy of the agreement, as signed by the Company, and by the representative of the employees, which is perfectly satisfactory to all parties concerned, and which agreement the Board is pleased to approve.

We have the honour to be,

Sir,

Your obedient servants,

(Sgd.) Rev. Father JAMES BRENNAN,
Chairman.

(Sgd.) E. V. McMILLAN,
Representative of Employees.

(Sgd.) J. L. O'FLYNN,
Representative of the Company.

THIS AGREEMENT MADE BETWEEN THE INTERNATIONAL TRANSIT COMPANY AND THEIR EMPLOYEES, BEING MEMBERS OF DIVISION NO. 850, AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES OF AMERICA.

The following wage schedule and working conditions shall be effective and binding on the

parties, from the 1st of October, 1921, and thereafter from year to year. If either party to this agreement desires any change, they shall give notice in writing not less than thirty (30) days prior to the 30th of September in each year, and on receipt of this notice the desired changes shall be open for discussion:

(A) That the Company agree to recognize the above Union and that the standing of any employee will not be affected by reason of his membership in the organization.

(B) The Company to meet and treat, through the properly accredited officers of the Association, upon all questions and differences that may arise during the time of this agreement.

In order to discuss matters affecting operation and promote better co-operation between all parties, a meeting will be held on the first Saturday following the 20th of each month between the Company's officers and the executive officers of the Union, the latter to be allowed full pay for time attending such meeting.

(C) Employees who are members of any committee, or officers of the Association, or delegates to the convention of the Association, shall be entitled to leave of absence for the purpose of attending conventions or doing such committee work without the loss of seniority rights or other privileges.

(D) Any employee against whom charges may be received shall report to the Superintendent when off duty. His case shall then be dealt with according to the rules and regulations of the Company, but any employee shall have the right of appeal to the General Manager or Vice-President of the Company, with a committee of the Association if he so desires. In case any member of the Association is suspended or discharged for any cause whatsoever, and upon investigation it is found the member was not at fault, he shall be reinstated to his former position and paid for all time lost. No employee under sixty (60) days in the service is covered by this clause.

(E) Nine hours shall constitute a day's work for all employees, and no employee will be compelled to work beyond his regular hours unless he is agreeable to do so.

(F) The Company will list all conductors and motormen in order of seniority. Conductors and motormen will have the right to choose the runs they prefer, in order of seniority, the choosing of runs to take place every three (3) months.

(G) Caps, badges and buttons, shall be supplied by the Company free of charge, and are to be returned by the employee on leaving the service.

(H) Heaters will be placed in the vestibule of all cars, and stools will be supplied for the use of the motormen while on duty.

(I) All employees will be granted free transportation at all times and on all car lines operated by the Company.

(J) In case of disruption of the service, through failure of power, snowstorms, etc., all employees reporting at the barn will be paid their regular day's pay. Reporting by telephone will not constitute a report as understood by this agreement.

(K) The following rates of wages to be paid Conductors, Motormen and Barn Employees:

1st Six Months.....	40c. per hour
2nd Six Months.....	41c. per hour
3rd Six Months.....	42c. per hour
4th Six Months.....	43c. per hour
thereafter	45c. per hour
Interlocker Signal Men.....	\$90 per month

and \$5.00 a month to the present employees, extra, on account of the long service of the present incumbents.

Dated at Sault Ste. Marie, Ontario, this twenty-ninth day of November, 1921.

THE INTERNATIONAL TRANSIT COMPANY.

(Sgd.) A. E. PICKERING,
General Manager.

Secretary.

STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1921

ONE strike, involving 150 workpeople, was reported as having commenced during December. There were in existence at some time or other during the month 17 strikes, involving approximately 2,883 employees and a total time loss estimated at 64,733 working days, as compared with 18 strikes, 3,950 workpeople and 98,099 working days in November, 1921; and 14 strikes, 1,822 workpeople and 20,324 working days in December, 1920. The time loss occasioned by the one strike which began in December was 900 working days, while a loss of 63,833 days is charged to the 16 strikes that commenced prior to December. One of the strikes commencing

prior to November was reported as having terminated during the month. The following 16 strikes, involving 2,458 workpeople, were on record on December 31: employees of steel and coal companies, Sydney; gauge men, Sydney; coal miners, Drumheller; compositors, Montreal; compositors, etc., Vancouver; photo engravers, Montreal; photo engravers, Ottawa; printers, Montreal; printers, Ottawa; printers, Toronto; printers, Winnipeg; printers, bookbinders and pressmen, Halifax; type-setters, pressmen and bookbinders, Hamilton; garment workers, Montreal; cigarmakers, Vancouver; and shoeworkers at Toronto.

Disputes by Industries

The following is a review of the disputes by industries in the order in which they appear in the statistical table. A brief summary is given of the more important strikes.

MINES, SMELTERS, QUARRIES, CLAY PRODUCTS, ETC.—Following a wage reduction of 25 per cent put into effect on December 21 by one coal mining company in the Drumheller field, 150 mine workers went on strike on December 24,

on the ground that this act constituted a violation of an agreement which does not expire until March. The company claimed that it was not a party to the agreement between the Western Canada Coal Operators' Association and the United Mine Workers of America. The latest information indicated that the mine was picketed and that officials of the union had gone to the scene to protest against the wage reduction and

Shoeworkers, Montreal and St. Hyacinthe, Que.	Commenced November 2. Against a reduction in wages. Settled by negotiations; work resumed December 12.	425	3,825
Shoeworkers, Toronto, Ont.....	Commenced April 26. Against reduction in wages. Unterminated...	8	208
Strike commencing during December, 1921			
MINES, SMELTERS, QUARRIES, CLAY PRODUCTS, ETC.—			
Coal miners, Drumheller, Alta.....	Commenced December 24. Against a reduction in wages. Unterminated.	150	900

effect a settlement if possible. The mine officials refused to meet them, and instead, it was reported, had warrants served for the arrest of some of the officials on the charge of trespassing on the property of the mining company and of intimidating men going to work. The strike was untermated at the end of the month.

PRINTING AND PUBLISHING.—The situation in this group at the end of the month was 10 strikes, involving 1,723 employees with an estimated time loss of

44,798 working days. During November and December there was practically no change in the situation. The deadlock over the question of the 44-hour week, which caused the strikes last May, has remained unbroken.

CLOTHING. — The strike of garment workers which commenced on November 9 in Montreal to maintain former wage and working conditions, was still in effect at the end of the month. Four hundred employees and nine firms were involved on December 31.

STRIKES AND LOCKOUTS IN THE UNITED KINGDOM DURING NOVEMBER, 1921

THE following details with regard to strikes and lockouts in the United Kingdom during November, 1921, based on returns from employers and workpeople, are taken from the December issue of the *British Labour Gazette*.

NUMBER, MAGNITUDE AND DURATION.

—The number of trade disputes involving a stoppage of work, reported to the Department as beginning in November, was 74, as compared with 64 in the previous month, and 60 in November, 1920. In these new disputes, nearly 26,000 workpeople were directly involved, and 2,000 indirectly involved (*i.e.*, thrown out of work at the establishments where the disputes occurred, though not themselves parties to the disputes). In addition to the numbers involved in new disputes nearly 8,000 workpeople were involved, either directly or indirectly, in 47 other disputes which began before November, and were still in progress at the beginning of that month. The total number of new and old disputes in progress in November was thus 121, involving about 36,000 workpeople, and resulting in a loss during November of about 250,000 working days.

The following table classifies the disputes by groups of trades and indicates the number of workpeople involved

(whether directly or indirectly) at the establishments concerned, and the approximate time lost during November in all the disputes in progress:—

Groups of Trades.	Number of disputes in progress in November			Number of workpeople involved in all disputes in progress in November.	Aggregate duration in working days of all disputes in progress in November.
	Started before 1st November.	Started in November.	Total.		
Building.....	6	11	17	4,000	30,000
Mining and quarrying..	11	23	34	18,000	98,000
Metal, engineering and shipbuilding.....	13	6	19	1,000	9,000
Other trades	17	34	51	13,000	117,000
Total, November, 1921.	47	74	121	38,000	252,000
Total, October, 1921..	49	64	113	25,000	187,000
Total, November, 1920	76	60	136	1,138,000†	3,631,000

†Including over 1,000,000 workpeople in the coal mining industry in Great Britain.

CAUSES.—Of the 74 new disputes, 41, directly involving nearly 11,000 workpeople, arose out of proposed reductions in wages; 11, directly involving nearly 2,000 workpeople, on other wages questions; 5, directly involving over 6,000 workpeople, on questions respecting working hours; 5, directly involving nearly 6,000 workpeople, on details of

working arrangements; and 12, directly involving about 1,000 workpeople, on other questions.

RESULTS. — During November settlements were effected in the case of 36 new disputes, directly involving over 19,000 workpeople, and 22 old disputes, directly involving over 3,000 workpeople. Of these disputes, 13, directly in-

volving over 4,000 workpeople, were settled in favour of the workpeople; 20, directly involving over 4,000 workpeople, in favour of the employers; and 25, directly involving over 14,000 workpeople, were compromised. In the case of 10 disputes, directly involving about 7,000 workpeople, work was resumed pending negotiations.

CONFERENCE OF WESTERN FEDERATION OF CIVIC EMPLOYEES

A CONFERENCE of the Western Federation of Civic Employees, a recently formed federation at present composed of civic unions of the cities of Alberta, was at held at Calgary on November 23 and 24 to consider resolutions respecting civic wage reductions and other matters which were adopted at a recent conference at Medicine Hat of officials of various Saskatchewan and Alberta cities. As noted in the LABOUR GAZETTE for December the Medicine Hat conference had adopted resolutions recommending reductions in the scale of pay for civic employees on the basis of reducing the rate for each position by 32 per cent of the difference between the 1921 rate and a figure 10 per cent above the 1914 rate for the same position, adjustments being made where it was recognized that the 1914 rates for any position were not on a fair basis as compared with other rates. The conference was presided over by Mr. E. H. Knight, president *pro tem* of the Federation, who is also president of the Calgary Civic Service Federation. There were present employee representatives from Calgary, Edmonton and Lethbridge; Mr. Walter Smitten, secretary of the Alberta Federation of Labour; Mr. F. E. Harrison, Dominion Fair Wage Officer; and Mr. John Noble, international representative of the electrical workers. Consideration was given to replies to letters which had been sent to civic employees' organizations in Alberta cities and also in various western cities outside of the province with a view to get-

ting concerted action for all the western cities.

The conference was opposed to any reduction in wages, as it was felt that salaries and wages now paid by the different municipalities are inadequate to meet the altered conditions of living, and that the 1922 schedule should be based upon the "improved conception of the standard of living, having in mind the increased cost of commodities, rent, etc." The basis of wage negotiations adopted by the Medicine Hat conference was claimed to be unfair and unjust in that it would reduce the wages of the lower paid men too far below the recognized minimum of \$130 per month as given by the LABOUR GAZETTE for July and August, 1921. It was pointed out that the official figures as given in the September issue of the LABOUR GAZETTE indicated an expenditure of \$103 per month for 65 per cent of the requirements of a family, or a total of \$139 per month, and that the figure is \$27 per month more than a workman's income at 60 cents per hour or \$112 per month, so that any amount below \$139 per month would deprive the labourer's family of some of the necessities essential to maintain a fair standard of living. [The figure referred to in the LABOUR GAZETTE for September was \$21.98 being the average cost in 60 cities for a family budget of food, fuel and rent, which was stated to be estimated to include 65 per cent of the average workingman's family expenditure. It was stated in the LABOUR GAZETTE, however, that the budget did not

purport to show the *minimum* cost of these items for a family, but did serve to show the changes in cost from month to month of the items included.] The conference recommended that any existing inequality and lack of uniformity in wages of civic employees, as recognized by the Medicine Hat conference, should be adjusted previous to considering wages for the year 1922. It also recommended that the minimum rate of pay agreed upon for permanent labourers should be the minimum rate for all common labour, and that the status of the teamster should be that of skilled labour. As an alternative to resolutions adopted at the Medicine Hat conference favouring one week's holiday with pay after two years' continuous service for hourly employees working $5\frac{1}{2}$ days per week and two weeks' holiday for all other employees working six days per week with one year's continuous service, and the non-payment of hourly employees for any statutory holiday on which they do not work, the conference adopted the following resolution "that all monthly employees who have worked continuously for one year shall receive two weeks' vacation on full pay and two weeks each year thereafter. When a legal holiday falls during a period of vacation equal time off shall be granted as service conditions permit. All hourly employees who have worked continuously for one year shall receive two weeks on full pay of the ordinary pay and two weeks each year thereafter." It was also resolved that "where employees have to work on Sundays extra remuneration should be granted and double time paid for all work on legal and statutory holidays"; that instead of apprentices receiving 40 per cent of the prevailing rate of pay for first year, 60 per cent for second year and 80 per cent for third year as adopted by the Medicine Hat conference, "the rate paid to apprentices of 18 years or over should not be less than the rate paid for common labour, and the rate paid to apprentices under 18 years of age should

not be less than 75 per cent of the rate paid to common labour, with annual increases of equal proportion until journeymen status is reached"; that spare men on street railways should be guaranteed not less than 150 hours work each month; that in the opinion of the conference motor-conductors are inadequately paid for the added responsibility and extra work that has been placed upon them by operating the one-man car, and that a new basis founded upon general practice should be established.

Other resolutions adopted by the conference were in favour of group health and accident insurance and group life insurance to cover all civic employees, and representatives from each city were requested to take these matters up with a view of having them adopted at an early date. The need of an old age pension scheme was also emphasized, and the various local units were asked to submit resolutions and schemes to the next conference of the Federation for consideration and recommendation.

Mr. E. H. Knight was appointed as president of the Federation, and Mr. J. J. McCormack, of Edmonton, as secretary until the next conference which would meet in Lethbridge in January, 1922, concurrent with the convention of the Alberta Federation of Labour. A special committee was appointed to draft a tentative constitution and set of by-laws to be forwarded to each civic union for its approval.

It was also agreed "that each union comprising the Western Federation of Civic Employees should affiliate with the Central Labour Council in its respective city; that each member-union consider at a special meeting the decisions arrived at at this conference and submit its report and recommendations to the secretary; and that the secretary communicate with other cities of Western Canada requesting them to consider favourably becoming a part of the Western Federation of Civic Employees.

CONVENTION OF THE INTERNATIONAL ASSOCIATION OF FIRE FIGHTERS

THE fourth annual convention of the International Association of Fire Fighters was held at Columbus, Ohio, on September 12-16, under the presidency of Mr. Fred W. Baer. There were present 74 delegates representing a membership of approximately 21,000.

The president drew attention to the progress made toward the adoption of the two-platoon system. It was first introduced in Omaha, he stated, in December, 1906, and it was five years later before a second city in the United States granted the system to its firemen. At present the two-platoon system has been adopted in 500 cities of the United States, Canada and the Canal Zone, and some of these cities have a three-platoon system.

The report of the secretary-treasurer gave the receipts for the year ended July 1, 1921, as \$41,460; the expenditure as \$41,742 and the balance on hand as \$6,777.

Among the important resolutions adopted by the convention was one providing for the appointment of a committee to draft a law looking toward the control of the occupancy and structure of buildings, with a view to preventing changes in occupancy or structure unless authorized by license or permit, thereby giving firemen knowledge of such changes and of the storage of inflammable material. Another resolution adopted with regard to preference to soldiers in appointments and promotions, was as follows: "That the International Association of Fire Fighters in convention condemns any sweeping preference as wrong in principle and against the best interests of the public and the firemen, and urges its members everywhere to carry on a campaign of education among the people in order that preference propositions shall be overwhelmingly defeated whenever and wherever they may be presented." With regard to a resolution respecting changes in salary, the convention favoured the

establishment of an information bureau for the purpose of providing information for the various affiliated locals, and the publication in the official journal of all changes in salaries and working conditions in all cities affiliated with the Association. Resolutions were adopted in favour of appointing a committee to formulate plans for selling life insurance to members at cost and establishing a home or homes for aged and indigent members, their widows and orphans, the committee to report to the next annual convention; directing the executive committee to get into touch with the various insurance companies handling group insurance with a view to offering this insurance to the members.

[It has since been reported that the executive of the Provincial Fire Fighters of Ontario have made special arrangements with a large life insurance company whereby members of the fire brigades will be eligible for insurance under a group scheme providing for payment of benefits at death or in cases of total disability.]

Other resolutions adopted were in favour of a universal union label for all unions affiliated with the American Federation of Labour; in favour of state or provincial organizations wherever there are in existence three or more locals; and in favour of a uniform Fire Department telephone number for the United States and Canada. A resolution to remove the international headquarters from Washington to Chicago was defeated.

It was decided that the next convention should be held at Tulsa, Oklahoma, the second Monday in September, 1922.

The following officers were elected: President, Fred W. Baer, Washington, D.C.; secretary-treasurer, George J. Richardson, Washington, D.C.; Canadian vice-presidents, Albert Higgins, Saskatoon, Sask.; and Donald Dear, Ottawa, Ont.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Third General Conference held in Geneva, Switzerland

THE Third General Conference of the International Labour Organization of the League of Nations, constituted under the provisions of the Treaties of Peace, was held in Geneva, Switzerland, from October 25 to November 19, and was attended by representatives of thirty-nine countries, namely, Albania, Australia, Austria, Belgium, Bolivia, Brazil, Bulgaria, Canada, Chile, China, Colombia, Cuba, Denmark, Spain, Esthonia, Finland, France, Germany, Great Britain, Greece, Guatemala, India, Italy, Japan, Latvia, Luxemburg, Norway, Netherlands, Poland, Portugal, Roumania, the Serb, Croat and Slovene State, Siam, South Africa, Sweden, Switzerland, Czecho-Slovakia, Uruguay and Venezuela. Of those present at the Conference sixty-eight were delegates appointed on behalf of the Governments, twenty-five delegates appointed on behalf of the employers and twenty-five delegates appointed on behalf of the workers. In addition to the delegates there were two hundred and thirty-four advisers in attendance, of whom ninety-six were advisers to the Government delegates, sixty-seven advisers to employers' delegates and seventy-one advisers to workers' delegates.

The objects for which the International Labour Organization was formed are set out in Part XIII of the Treaties of Peace and are briefly to promote by international agreement the improvement of labour conditions. The two previous Conferences were held in Wash-

ington, D.C., in 1919*, and in Genoa, Italy, in 1920†, respectively.

Under the terms of the Treaties of Peace, each state adhering thereto is entitled to four delegates in the International Labour Conference, two of whom shall be Government delegates and the two others shall be delegates representing respectively the employers and workpeople of the country, chosen in agreement with the industrial organizations, if such organizations exist, which are most representative of employers or workpeople, as the case may be, in the respective countries. Each delegate is entitled to be accompanied by advisers not exceeding two in number. It is also provided in the Treaties of Peace that the decisions of the Conference may take the form of (a) a recommendation to be submitted to the member states for consideration with a view to effect being given to it by national legislation or otherwise, or (b) a draft international convention for ratification by the member states. A two-thirds majority of the votes cast by the delegates is required for adoption of any recommendation or draft convention by the Conference. The

* A résumé of the proceedings of the first International Labour Conference together with the text of the Conventions and Recommendations was published in the December, 1919, number of the LABOUR GAZETTE, see pages 1425-1440.

† A résumé of the proceedings of the second International Labour Conference together with the text of the Conventions and Recommendations was published in the October, 1920, number of the LABOUR GAZETTE, see pages 1316-1323.

recommendations and draft conventions are afterwards transmitted through the Secretariat of the League of Nations to the different countries represented on the International Labour Organization for acceptance or otherwise. Each country is obliged under the Treaties within the period of one year at most from the closing of the Conference, or if it is impossible owing to exceptional circumstances to do so within one year, then at the earliest practicable moment and in no case later than eighteen months from the closing of the Conference, to bring the respective recommendations or draft conventions "before the authority or authorities within whose competence the matter lies for the enactment of legislation or other action."

Agenda of Conference

The Agenda of the Conference was as follows:—

1. Reform of constitution of the Governing Body of the International Labour Office.
2. Adaptation to agricultural labour of the Washington decisions concerning the regulation of the hours of work.
3. Adaptation to agricultural labour of the Washington decisions concerning:—
 - (a) Measures for the prevention of or providing against unemployment;
 - (b) Protection of women and children.
4. Special measures for the protection of agricultural workers:—
 - (a) Technical agricultural education;
 - (b) Living-in conditions of agricultural workers;
 - (c) Guarantee of the rights of association and combination;
 - (d) Protection against accident, sickness, invalidity and old age.
5. Disinfection of wool infected with anthrax spores.
6. Prohibition of the use of white lead in painting.
7. The weekly rest day in industrial and commercial employment.
8. (a) The prohibition of the employment of any person under the age of 18 years as trimmer or stoker;
- (b) Compulsory medical examination of all children employed on board ship.

The Canadian Delegation

The Canadian delegation to the Conference took an active part in the proceedings both of the General Conference and of the various commissions which were established in connection therewith.

Since certain items of the agenda were regarded as relating to matters within provincial jurisdiction, the governments of the Canadian provinces were invited by the Dominion to be represented and the status of advisers was given to the provincial representatives. Three of the provincial governments accepted this invitation and appointed representatives, namely, Ontario, Quebec and Manitoba. The delegate on behalf of the employers of Canada was appointed on the nomination of the Canadian Manufacturers' Association and the delegate on behalf of the workers of Canada on the nomination of the Trades and Labour Congress of Canada. The Canadian delegation was composed as follows:—

Government Delegates:—

Mr. Gerald H. Brown, Assistant Deputy Minister of Labour of Canada.
 Lt.-Col. J. Obed Smith, Superintendent of Emigration, London, England.

Technical Advisers:—

Hon. W. R. Rollo, Minister of Labour for the Province of Ontario.
 Hon. Thos. H. Johnson, K.C., Attorney-General for Manitoba.
 Hon. Antonin Galipeault, Minister of Labour for the Province of Quebec.
 Mr. Ferdinand Roy, K.C., Quebec, P. Q.

Employers' Delegate:—

Mr. S. R. Parsons, Toronto, former President of the Canadian Manufacturers' Association.

Technical Adviser:—

Mr. E. Blake Robertson, Ottawa, representative of Canadian Manufacturers' Association.

Workers' Delegate:—

Mr. Tom Mobre, Ottawa, President of the Trades and Labour Congress of Canada.

Technical Adviser:—

Mr. Arthur Martel, Montreal, Vice-President of the Trades and Labour Congress of Canada.

Seven commissions were established for the consideration of different items of the Conference agenda. The Canadian Government delegation was given representation on three of these bodies as follows:

Commission on white lead, Colonel J. Obed Smith; Colonel Smith was honoured with the chairmanship of this commission.

Commission on unemployment among agricultural workers and the protection of agricultural workers against accident, sickness, invalidity and old age, Hon. A. Galipeault, Minister of Labour for Quebec.

Commission on technical agricultural education and the right of agricultural workers to membership in labour organizations, Hon. W. R. Rollo, Minister of Labour for Ontario.

The Canadian employers' delegation was given representation in three commissions, namely the protection of agricultural workers against sickness, invalidity and old age; the commission on weekly rest and the commission on white lead. Mr. S. R. Parsons, the Canadian employers' delegate, participated in the meetings of the first two commissions, and Mr. E. Blake Robertson, Canadian employers' adviser, in the meetings of the commission on white lead.

The Canadian workers' delegation was represented on three commissions, namely, the commission on unemployment of agricultural workers and protection of agricultural workers against accident, sickness, invalidity and old age; the commission on weekly rest and the commission on maritime questions. Mr. Tom Moore, Canadian workers' delegate, attended the meetings of the first two

commissions and Mr. Arthur Martel, Canadian workers' adviser, the meetings of the third commission. Mr. Moore was honoured with the vice-chairmanship of the commission on weekly rest.

Mr. Gerald H. Brown, Canadian Government delegate, was elected as one of the Government representatives on the Committee of Selection of the Conference which acted as a committee on general purposes throughout the Conference sessions. This committee was also entrusted with the examination of the first item of the agenda, namely, proposals for the reform of the Governing Body of the International Labour Office, and gave consideration as well to suggestions for certain changes in the standing orders.

The Honourable Viscount Burnham, of London, England, was elected by the Conference as its President. The President presided over all the meetings of the Conference with conspicuous tact and ability and was ably supported by M. Albert Thomas, Director of the International Labour Office, who acted as the Secretary-General of the Conference, and by Mr. H. B. Butler, Deputy-Director of the International Labour Office, who acted as Deputy Secretary-General. Three Vice-Presidents were also elected as follows: Mr. Cincinato Da Silva Braga, Government Delegate, Brazil; Mr. J. S. Edstrom, Employers' Delegate, Sweden; and M. Léon Jouhaux, Workers' Delegate, France.

Questionnaires from the International Labour Office had been distributed in advance of the Conference to all the governments entitled to representation therein, dealing with the different items of the Conference agenda. The information extracted from the governmental replies was subsequently published in pamphlets relating to the respective items on the agenda.

The separate items of the agenda were all referred by the Conference to commission for examination and report, with the exception of the second item relative to the adaptation to agricultural labour of the decisions of the first Inter-

national Labour Conference concerning hours of work. The French Government entered formal objection under Article 402 of the Treaties of Peace against the inclusion in the Conference agenda of the items relating to conditions of work in agriculture. It was pointed out that agricultural workers were not specifically mentioned in the Peace Treaties and attention was called to doubts expressed by parliamentary committees and agricultural organizations in France as to whether it was within the competence of the International Labour Organization to deal at all with agricultural questions. A statement presented by the French Government in support of this proposal expressed the view that the conditions in which agricultural labour was performed rendered inopportune the discussion of any international regulation of agricultural employment. Reference was made to the diversity of economic, social and climatic conditions and of technical requirements as affecting agriculture in various countries as an obstacle to effective international regulation. It was further contended that having regard to the world economic situation the present moment would be particularly ill-chosen for international experiments which might tend to any diminution of agricultural production. In conclusion the statement objected to the inclusion in the agenda of all agricultural questions as being inopportune. A general discussion ensued, as the result of which it was decided that agricultural questions are within the jurisdiction of the International Labour Organization, but that consideration of the regulation of hours of work in agriculture should be deferred to a future conference.

Consideration by the commissions and afterwards by the general Conference resulted in the adoption of seven Draft Conventions and eight Recommendations as follows:—

Conventions:

- (1) Minimum age of trimmers and stokers in ships.
- (2) Medical inspection of children and young persons in ships.

- (3) Use of white lead in painting.
- (4) Right of association of agricultural workers.
- (5) Workmen's compensation for agricultural workers.
- (6) Employment of children in agriculture.
- (7) Weekly rest in industrial undertakings.

Recommendations:

- (1) Technical education for agricultural workers.
- (2) Unemployment among agricultural workers.
- (3) Social insurance for agricultural workers.
- (4) Night work of children in agriculture.
- (5) Night work of women in agriculture.
- (6) Maternity among agricultural workers.
- (7) Living-in conditions of agricultural workers.
- (8) Weekly rest in commercial establishments.

Anthrax

With reference to item five of the agenda, the proposal which had been submitted to the Conference for the universal compulsory disinfection of wool exported from one country to another was not favoured by the commission, and the view was expressed by the latter that this subject had not yet been sufficiently studied to justify the adoption of a draft convention. The commission proposed that the question of international action in this matter should be made the subject of further investigation by an advisory committee appointed by the Governing Body of the International Labour Office, and that the advisory committee should be instructed to report in time for consideration of the subject at the 1923 Conference. The report of the commission on anthrax was adopted in the general Conference unanimously.

Reform of Government Body

With reference to the first item of the agenda, the proposals which had been submitted to the Conference looking to the reform of the Governing Body of the International Labour Office were considered by the Committee of Selection of the Conference. The report presented by the latter pointed out that a satisfactory solution would involve certain alterations in the Treaties of Peace. It was, therefore, advised that the question of altering the Treaties should be referred to the Governing Body for study and to be put on the agenda of the next annual Conference. In the meantime with regard to the forthcoming election, in 1922, of the Governing Body the Committee of Selection submitted certain proposals which in their opinion would give a certain measure of satisfaction. A resolution was adopted by the Conference requesting the Council of the League of Nations to give its decisions upon the protests which have been submitted to it concerning the list of the eight states of chief industrial importance before the next election of the Governing Body of the International Labour Office, in order to ensure that the elections to the Governing Body at the 1922 Conference should take place in a fully regular manner. Pending the full decision of the question of the composition of the Governing Body by amendment to the Treaties of Peace the Conference adopted a resolution declaring that equitable provision should be made for the representation of the chief non-European areas and as a provisional step in that direction made the following recommendation relative to the election to be held in 1922, which shall remain in force until the receipt of the necessary number of ratifications required by Article 422 of the Treaties to the modifications adopted by the 1922 session of the Conference, namely, that of the twelve Governments represented on the Governing Body, four should be from extra-European countries; of the six delegates of the employers' group at least one should be from an extra-

European country, and that of the six delegates of the workers' group at least one should be from an extra-European country.

Standing Orders

The Conference also directed the Governing Body to study a proposal for a system of rotation in the membership of the Governing Body and to report to the next session of the Conference.

The Governing Body was further directed to give consideration to certain proposals for the reform of the standing orders of the Conference and to report on the same at the 1922 Conference.

Raw Materials

A resolution was adopted directing the International Labour Office to confer with the League of Nations on the question of the distribution of raw materials and to present a report on the social aspect of this enquiry at the next annual Conference.

Unemployment

The International Labour Office was also instructed to institute a special enquiry on the national and international aspect of the unemployment crisis, and on the means of combatting it, and the Governing Body of the International Labour Office was instructed to undertake all necessary negotiations for the convocation of an international conference to study the remedies of an international character likely to put an end to the unemployment crisis.

Weekly Rest in Commerce

The Conference affirmed by resolution its conviction that it is the duty of all members of the International Labour Organization to encourage the adoption of a weekly day of rest for workers. For this reason it invited the competent authority in each country to encourage collective agreements between the employers' and workers' organizations in

order to fix, wherever the working conditions of the industry, trade or profession concerned permit, a re-arrangement of the hours of labour which will allow of an extension of the weekly rest to at least thirty-six hours.

Prohibition of White Lead

The most warmly contested item of the agenda was that relative to the prohibition of the use of white lead in painting. The commission on this subject sat continuously for three weeks and produced a majority and minority report, the majority report favouring the use of white lead subject to regulations, and the minority report advocating prohibition. The subject was, however, referred back to the commission for further attention and a compromise proposition was recommended by the commission on the following lines: For internal painting of buildings (except railway stations and industrial establishments) the use of white lead to be prohibited after six years, but its use in external painting to be allowed subject to proper regulations. Eventually this compromise was adopted in the form of a draft convention by the Conference.

Weekly Day of Rest in Industry

Another item of the agenda which attracted wide-spread attention was a proposal for the adoption of a weekly rest day in industry. A draft convention was adopted on this subject providing for a rest period of at least twenty-four consecutive hours in each week for all workers in industry, subject to exceptions to be made by the Governments after consultation with employers' and workers' organizations and to be reported with reasons to the International Labour Office. Where rest periods are suspended or reduced compensatory rest is to be given as far as possible.

Draft Conventions and Recommendations Respecting Agriculture

Three of the Draft Conventions and seven of the Recommendations of the

Conference relate to agricultural employment, as follows:—

DRAFT CONVENTIONS.

1. Extending to all agricultural wage-earners the benefit of laws and regulations which provide for compensation for personal injury by accident arising out of, or in the course of their employment.
2. Establishing the rights of associations and combination for agricultural workers, as for industrial workers.
3. Prohibiting the employment of children under fourteen in agriculture, during compulsory school hours. Such prohibition does not apply to work done by children in technical schools, provided such work is approved and supervised by public authority.

RECOMMENDATIONS.

1. To prevent unemployment among agricultural workers by taking steps to bring more land under cultivation, making temporary work accessible to the unemployed by the provision of transport facilities, and encouraging agricultural workers' co-operative and agricultural societies.
2. Extending to agricultural wage-earners the benefit of laws and regulations instituting systems of insurance against sickness, invalidity, old age and other social risks, on conditions equivalent to those prevailing in the case of workers in industry and commerce.
3. Providing for the moral and hygienic regulation of living-in conditions of agricultural workers, living either with or without their families in accommodations provided by their employers.
4. Establishing protective measures for women before and after childbirth, such measures to include the right to a period of absence from work before and after childbirth, and to a grant of benefit during that period, provided either out of public funds or by a system of insurance.

5. Providing for women engaged in night work a period of rest of at least nine hours, which shall, if possible, be consecutive.

6. Providing for children engaged in agricultural night work a period of at least ten consecutive hours' rest. Young persons under eighteen are to enjoy a period of rest of not less than nine hours, which shall, if possible, be consecutive.

7. Developing technical agricultural education and making it available to agricultural wage-earners on the same conditions as to other persons engaged in agriculture.

Employment on Board Ship

Of the two Draft Conventions relative to employment on board ship one fixes

at eighteen the minimum age of trimmers and stokers on all ships except war ships, school or training ships, or ships not propelled by steam—unless no persons over eighteen are available, in which case young persons of not less than sixteen, if found physically fit after medical examination, may be employed as stokers or trimmers on vessels engaged in the coastal trade of India or Japan. Two such young persons are to be regarded as the equivalent of one man. The other Draft Convention establishes compulsory medical examination for any child or young person under eighteen employed on any vessel except a war ship or vessel upon which only members of the same family are employed.

Texts of Draft Conventions

Following are the texts of the Draft Conventions of the Conference as issued by the International Labour Office:—

Draft Convention fixing the Minimum Age for the Admission of Young Persons to Employment as Trimmers or Stokers

The General Conference of the International Labour Organization of the League of Nations

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Third Session on 25th October, 1921, and

Having decided upon the adoption of certain proposals with regard to the prohibition of the employment of any person under the age of 18 years as trimmer or stoker, which is included in the eighth item of the Agenda of the Session, and

Having determined that these proposals shall take the form of a draft international convention,

adopts the following Draft Convention for ratification by the Members of the International Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding parts of the other Treaties of Peace.

ARTICLE 1.

For the purpose of this Convention, the term "vessel" includes all ships and boats, of any

nature whatsoever, engaged in maritime navigation, whether publicly or privately owned; it excludes ships of war.

ARTICLE 2.

Young persons under the age of eighteen years shall not be employed or work on vessels as trimmers or stokers.

ARTICLE 3.

The provisions of Article 2 shall not apply:

(a) to work done by young persons on school-ships or training-ships, provided that such work is approved and supervised by public authority;

(b) to the employment of young persons on vessels mainly propelled by other means than steam;

(c) to young persons of not less than sixteen years of age, who if found physically fit after medical examination, may be employed as trimmers or stokers on vessels exclusively engaged in the coastal trade of India and of Japan, subject to regulations made after consultation with the most representative organizations of employers and workers in those countries.

ARTICLE 4.

When a trimmer or stoker is required in a port where young persons of less than eighteen years of age only are available, such young persons may be employed, and in that case it shall be necessary to engage two young persons in place of the trimmer or stoker required. Such young persons shall be at least 16 years of age.

ARTICLE 5.

In order to facilitate the enforcement of the provisions of this Convention, every shipmaster shall be required to keep a register of all persons under the age of eighteen years employed on board his vessel, or a list of them in the articles of agreement, and of the dates of their births.

ARTICLE 6.

Articles of agreement shall contain a brief summary of the provision of this Convention.

ARTICLE 7.

The formal ratification of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace, shall be communicated to the Secretary General of the League of Nations for registration.

ARTICLE 8.

This Convention shall come into force at the date on which the ratifications of two members of the International Labour Organization have been registered by the Secretary General.

It shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

Thereafter, the Convention shall come into force for any Member at the date on which its ratification has been registered with the Secretariat.

ARTICLE 9.

As soon as the ratification of two Members of the International Labour Organization have

been registered with the Secretariat, the Secretary General of the League of Nations shall so notify all the members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

ARTICLE 10.

Subject to the provisions of Article 8, each Member which ratifies this Convention agrees to bring the provisions of Articles 1, 2, 3, 4, 5 and 6 into operation not later than 1st January, 1924, and to take such action as may be necessary to make these provisions effective.

ARTICLE 11.

Each Member of the International Labour Organization which ratifies this Convention engages to apply it to its colonies, possessions and protectorates, in accordance with the provisions of Article 421 of the Treaty of Versailles and of the corresponding Articles of the other Treaties of Peace.

ARTICLE 12.

A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

ARTICLE 13.

At least once in ten years, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision or modification.

ARTICLE 14.

The French and English texts of this Convention shall both be authentic.

Draft Convention concerning the Compulsory Medical Examination of Children and Young Persons Employed at Sea

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Third Session on 25th October, 1921, and

Having decided upon the adoption of certain proposals with regard to the com-

pulsory medical examination of children and young persons employed at sea, which is included in the eighth item of the Agenda of the Session, and,

Having determined that these proposals shall take the form of a draft international convention,

adopts the following Draft Convention for ratification by the Members of the Inter-

national Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding parts of the other Treaties of Peace.

ARTICLE 1.

For the purpose of this Convention, the term "vessel" includes all ships and boats, of any nature whatsoever, engaged in maritime navigation, whether publicly or privately owned; it excludes ships of war.

ARTICLE 2.

The employment of any child or young person under 18 years of age on any vessel other than vessels upon which only members of the same family are employed, shall be conditional on the production of a medical certificate attesting fitness for such work, signed by a doctor who shall be approved by the competent authority.

ARTICLE 3.

The continued employment at sea of any such child or young person shall be subject to the repetition of such medical examination at intervals of not more than one year, and the production, after each such examination, of a further medical certificate attesting fitness for such work. Should a medical certificate expire in the course of a voyage, it shall remain in force until the end of the said voyage.

ARTICLE 4.

In urgent cases, the competent authority may allow a young person below the age of 18 years to embark without having undergone the examination provided for in articles 2 and 3 of this Convention, always provided that such an examination shall be undergone at the first port at which the vessel calls.

ARTICLE 5.

The formal ratifications of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace, shall be communicated to the Secretary General of the League of Nations for registration.

ARTICLE 6.

This Convention shall come into force at the date on which the ratifications of two Members of the International Labour Organization have been registered by the Secretary General.

It shall be binding only upon those Mem-

bers whose ratifications have been registered with the Secretariat.

Thereafter, the Convention shall come into force for any Member at the date on which its ratification has been registered with the Secretariat.

ARTICLE 7.

As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

ARTICLE 8.

Subject to the provisions of Article 6, each Member which ratifies this Convention agrees to bring the provisions of Articles 1, 2, 3 and 4 into operation not later than January 1, 1924, and to take such action as may be necessary to make these provisions effective.

ARTICLE 9.

Each Member of the International Labour Organization which ratifies this Convention engages to apply it to its colonies, possessions and protectorates, in accordance with the provisions of Article 421 of the Treaty of Versailles and of the corresponding Articles of the other Treaties of Peace.

ARTICLE 10.

A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

ARTICLE 11.

At least once in ten years, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision or modification.

ARTICLE 12.

The French and English texts of this Convention shall both be authentic.

Draft Convention concerning the use of White Lead in Painting

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Third Session on 25th October, 1921, and

Having decided upon the adoption of certain proposals with regard to the prohibition of the use of white lead in painting which is the sixth item of the Agenda of the Session, and

Having determined that these proposals shall take the form of a draft international convention,

adopts the following Draft Convention for ratification by Members of the International Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace.

ARTICLE 1.

Each Member of the International Labour Organization ratifying the present convention undertakes to prohibit, with the exceptions provided for in Article 2, the use of white lead and sulphate of lead and of all products containing these pigments, in the internal painting of buildings, except where the use of white lead or sulphate of lead or products containing these pigments is considered necessary for railway stations or industrial establishments by the competent authority after consultation with the employers' and workers' organizations concerned.

It shall nevertheless be permissible to use white pigments containing a maximum of 2 per cent of lead expressed in terms of metallic lead.

ARTICLE 2.

The provisions of Article 1 shall not apply to artistic painting or fine lining.

The Governments shall define the limits of such forms of painting and shall regulate the use of white lead, sulphate of lead, and all products containing these pigments, for these purposes in conformity with the provisions of Articles 5, 6 and 7 of the present Convention.

ARTICLE 3.

The employment of males under 18 years of age and of all females shall be prohibited in any painting work of an industrial character involving the use of white lead or sulphate of lead or other products containing these pigments.

The competent authorities shall have power, after consulting the employers' and workers' organizations concerned, to permit the employment of painters' apprentices in the work prohibited by the preceding paragraph, with a view to their education in their trade.

ARTICLE 4.

The prohibitions prescribed in Articles 1 and 3 shall come into force six years from the date of the closure of the Third Session of the International Labour Conference.

ARTICLE 5.

Each Member of the International Labour Organization ratifying the present Convention undertakes to regulate the use of white lead, sulphate of lead, and of all products containing these pigments, in operations for which their use is not prohibited, on the following principles:—

- I. (a) White lead, sulphate of lead, or products containing these pigments shall not be used in painting operations except in the form of paste or paint ready for use.
(b) Measures shall be taken in order to prevent danger arising from the application of paint in the form of spray.
(c) Measures shall be taken, wherever practicable, to prevent danger arising from dust caused by dry rubbing down and scraping.
- II. (a) Adequate facilities shall be provided to enable working painters to wash during and on cessation of work.
(b) Overalls shall be worn by working painters during the whole of the working period.
(c) Suitable arrangements shall be made to prevent clothing put off during working hours being soiled by painting material.
- III. (a) Cases of lead poisoning and of suspected lead poisoning shall be notified, and shall be subsequently verified by a medical man appointed by the competent authority.
(b) The competent authority may require, when necessary, a medical examination of workers.
- IV. Instructions with regard to the special hygienic precautions to be taken in the painting trade shall be distributed to working painters.

ARTICLE 6.

The competent authority shall take such steps as it considers necessary to ensure the observance of the regulations prescribed by

virtue of the foregoing Articles, after consultation with the employers' and workers' organizations concerned.

ARTICLE 7.

Statistics with regard to lead poisoning among working painters shall be obtained:—

- (a) As to morbidity—by notification and certification of all cases of lead poisoning.
- (b) As to mortality—by a method approved by the official statistical authority in each country.

ARTICLE 8.

The formal ratification of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and of corresponding parts of the other Treaties of Peace shall be communicated to the Secretary-General of the League of Nations for registration.

ARTICLE 9.

This Convention shall come into force at the date on which the ratifications of two Members of the International Labour Organization have been registered by the Secretary-General.

It shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

Thereafter, the Convention shall come into force for any Member at the date on which its ratification has been registered with the Secretariat.

ARTICLE 10.

As soon as the ratification of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registrations of

ratifications which may be communicated subsequently by other Members of the Organization.

ARTICLE 11.

Each Member which ratifies this Convention agrees to bring the provisions of Articles 1, 2, 3, 4, 5, 6 and 7 into operation not later than 1st January, 1924, and to take such action as may be necessary to make these provisions effective.

ARTICLE 12.

Each Member of the International Labour Organization which ratifies this Convention engages to apply it to its colonies, possessions and protectorates in accordance with the provisions of Article 421 of the Treaty of Versailles and of the corresponding Articles of the other Treaties of Peace.

ARTICLE 13.

A Member which has ratified this Convention may denounce after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

ARTICLE 14.

At least once in ten years the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the agenda of the Conference the question of its revision or ratification.

ARTICLE 15.

The French and English texts of this Convention shall both be authentic.

Draft Convention concerning the Rights of Association and Combination of Agricultural Workers

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Third Session on 25th October, 1921, and

Having decided upon the adoption of certain proposals with regard to the rights of association and combination of agricul-

tural workers which is included in the fourth item of the agenda of the session, and

Having determined that these proposals shall take the form of a draft international convention,

adopts the following Draft Convention for ratification by Members of the International Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace.

ARTICLE 1.

Each Member of the International Labour Organization which ratifies this Convention undertakes to secure to all those engaged in agriculture the same rights of association and combination as to industrial workers, and to repeal any statutory or other provisions restricting such rights in the case of those engaged in agriculture.

ARTICLE 2.

The formal ratifications of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace shall be communicated to the Secretary-General of the League of Nations for registration.

ARTICLE 3.

This Convention shall come into force at the date on which the ratifications of two Members of the International Labour Organization have been registered by the Secretary-General.

It shall then be binding only upon those Members whose ratifications have been registered with the Secretariat.

Thereafter, the Convention shall come into force for any Member at the date on which its ratification has been registered with the Secretariat.

ARTICLE 4.

As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated

subsequently by other Members of the Organization.

ARTICLE 5.

Subject to the provisions of Article 3, each Member which ratifies this Convention agrees to bring the provisions of Article 1 into operation not later than 1st January, 1924, and to take such action as may be necessary to make these provisions effective.

ARTICLE 6.

Each Member of the International Labour Organization which ratifies this Convention engages to apply it to its colonies, possessions and protectorates in accordance with the provisions of Article 421 of the Treaty of Versailles and of the corresponding Articles of the other Treaties of Peace.

ARTICLE 7.

A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

ARTICLE 8.

At least once in ten years, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the agenda of the Conference the question of its revision or modification.

ARTICLE 9.

The French and English texts of this Convention shall both be authentic.

Draft Convention concerning Workmen's Compensation in Agriculture

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Third Session on 25th October, 1921, and

Having decided upon the adoption of certain proposals with regard to the protection of agricultural workers against accidents which is included in the fourth item of the Agenda of the Session, and

Having determined that these proposals shall take the form of a draft international convention,

adopts the following Draft Convention for ratification by Members of the International Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace.

ARTICLE 1.

Each Member of the International Labour Organization which ratifies this Convention undertakes to extend to all agricultural wage-earners its laws and regulations which provide for the compensation of workers for personal injury by accident arising out of or in the course of their employment.

ARTICLE 2.

The formal ratifications of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace shall be communicated to the Secretary-General of the League of Nations for registration.

ARTICLE 3.

This Convention shall come into force at the date on which the ratifications of two Members of the International Labour Organization have been registered by the Secretary-General.

It shall then be binding only upon those Members whose ratifications have been registered with the Secretariat.

Thereafter, the Convention shall come into force for any Member at the date on which its ratification has been registered with the Secretariat.

ARTICLE 4.

As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

ARTICLE 5.

Subject to the provisions of Article 3, each Member which ratifies this Convention agrees

to bring the provisions of Article 1 into operation not later than 1st January, 1924, and to take such action as may be necessary to make these provisions effective.

ARTICLE 6.

Each Member of the International Labour Organization which ratifies this Convention engages to apply it to its colonies, possessions and protectorates, in accordance with the provisions of Article 421 of the Treaty of Versailles and of the corresponding Articles of the other Treaties of Peace.

ARTICLE 7.

A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

ARTICLE 8.

At least once in ten years, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision or modification.

ARTICLE 9.

The French and English texts of this Convention shall both be authentic.

Draft Convention concerning the Age for Admission of Children to Employment in Agriculture

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Third Session on 25th October, 1921, and

Having decided upon the adoption of certain proposals with regard to "the employment of children in agriculture during compulsory school hours" which is included in the third item of the Agenda of the Session, and

Having determined that these proposals shall take the form of a draft international convention,

adopts the following Draft Convention for ratification by Members of the International

Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace.

ARTICLE 1.

Children under the age of fourteen years may not be employed or work in any public or private agricultural undertaking, or in any branch thereof, save outside the hours fixed for school attendance. If they are employed outside the hours of school attendance, the employment shall not be such as to prejudice their attendance at school.

ARTICLE 2.

For purposes of practical vocational instruction the periods and the hours of school

attendance may be so arranged as to permit the employment of children on light agricultural work and in particular on light work connected with the harvest, provided that such employment shall not reduce the total annual period of school attendance to less than eight months.

ARTICLE 3.

The provisions of Article 1 shall not apply to work done by children in technical schools, provided that such work is approved and supervised by public authority.

ARTICLE 4.

The formal ratification of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and corresponding Parts of the other Treaties of Peace, shall be communicated to the Secretary-General of the League of Nations for registration.

ARTICLE 5.

This Convention shall come into force at the date on which the ratifications of two Members of the International Labour Organization have been registered by the Secretary-General.

It shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

Thereafter, the Convention shall come into force for any Member at the date on which its ratification has been registered with the Secretariat.

ARTICLE 6.

As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated sub-

sequently by other Members of the Organization.

ARTICLE 7.

Subject to the provisions of Article 5, each Member which ratifies this Convention agrees to bring the provisions of Articles 1, 2 and 3 into operation not later than 1st January, 1924, and to take such action as may be necessary to make these provisions effective.

ARTICLE 8.

Each Member of the International Labour Organization which ratifies this Convention engages to apply it to its colonies, possessions and protectorates, in accordance with the provisions of Article 421 of the Treaty of Versailles and of the corresponding Articles of the other Treaties of Peace.

ARTICLE 9.

A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

ARTICLE 10.

At least once in ten years the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision or modification.

ARTICLE 11.

The French and English texts of this Convention shall both be authentic.

Draft Convention concerning the application of the Weekly Rest in Industrial Undertakings

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Third Session on 25th October, 1921, and

Having decided upon the adoption of certain proposals with regard to the weekly rest day in industrial employment which is in-

cluded in the seventh item of the Agenda of the Session, and

Having determined that these proposals shall take the form of a draft international convention,

adopts the following Draft Convention for ratification by the Members of the International Labour Organization, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace.

ARTICLE 1.

For the purpose of this Convention, the term "industrial undertakings" includes:

(a) Mines, quarries, and other works for the extraction of minerals from the earth.

(b) Industries in which articles are manufactured, altered, cleaned, repaired, ornamented, finished, adapted for sale, broken up or demolished, or in which materials are transformed; including shipbuilding and the generation, transformation, and transmission of electricity or motive power of any kind.

(c) Construction, reconstruction, maintenance, repair, alteration, or demolition of any building, railway, tramway, harbour, dock, pier, canal, inland waterway, road, tunnel, bridge, viaduct, sewer, drain, well, telegraphic or telephonic installation, electrical undertaking, gas work, waterwork, or other work of construction as well as the preparation for or laying the foundation of any such work or structure.

(d) Transport of passengers or goods by roads, rail, or inland waterway, including the handling of goods at docks, quays, wharves or warehouses, but excluding transport by hand.

This definition shall be subject to the special national exceptions contained in the Washington Convention limiting the hours of work in industrial undertakings to eight in the day and forty-eight in the week, so far as such exceptions are applicable to the present Convention.

Where necessary, in addition to the above enumeration, each Member may define the line of division which separates industry from commerce and agriculture.

ARTICLE 2.

The whole of the staff employed in any industrial undertaking, public or private, or in any branch thereof shall, except as otherwise provided for by the following articles, enjoy in every period of seven days a period of rest comprising at least 24 consecutive hours.

This period of rest shall, wherever possible, be granted simultaneously to the whole of the staff of each undertaking.

It shall, wherever possible, be fixed so as to coincide with the days already established by the traditions or customs of the country or district.

ARTICLE 3.

Each Member may except from the application of the provisions of Article 2 persons employed in industrial undertakings in which only the members of one single family are employed.

ARTICLE 4.

Each Member authorize total or partial exceptions, (including suspensions or diminutions) from the provisions of Article 2, special

regard being had to all proper humanitarian and economic considerations and after consultation with responsible associations of employers and workers, wherever such exist.

Such consultation shall not be necessary in the case of exceptions which have already been made under existing legislation.

ARTICLE 5.

Each Member shall make as far as possible provision for compensatory periods of rest for the suspensions or diminutions made in virtue of Article 4, except in cases where agreements or customs already provide for such periods.

ARTICLE 6.

Each Member will draw up a list of the exceptions made under Articles 3 and 4 of this Convention, and will communicate it to the International Labour Office, and thereafter in every second year any modifications of this list which shall have been made.

The International Labour Office will present a Report on this subject to the General Conference of the International Labour Organization.

ARTICLE 7.

In order to facilitate the application of the provisions of this Convention, each employer, director, or manager, shall be obliged:

(a) Where the weekly rest is given to the whole of the staff collectively, to make known such days and hours of collective rest by means of notices posted conspicuously in the establishment or any other convenient place, or in any other manner approved by the Government.

(b) Where the rest period is not granted to the whole of the staff collectively, to make known by means of a roster drawn up in accordance with the method approved by the legislation of the country, or by a regulation of the competent authority, the workers or employees subject to a special system of rest, and to indicate that system.

ARTICLE 8.

The formal ratification of this Convention under the conditions set forth in Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace, shall be communicated to the Secretary-General of the League of Nations for registration.

ARTICLE 9.

This Convention shall come into force at the date on which the ratifications of two Members of the International Labour Organization have been registered by the Secretary-General.

It shall be binding only upon those Members whose ratifications have been registered with the Secretariat.

Thereafter, the Convention shall come into force for any Member at the date on which its ratification has been registered with the Secretariat.

ARTICLE 10.

As soon as the ratifications of two Members of the International Labour Organization have been registered with the Secretariat, the Secretary-General of the League of Nations shall so notify all the Members of the International Labour Organization. He shall likewise notify them of the registration of ratifications which may be communicated subsequently by other Members of the Organization.

ARTICLE 11.

Each Member which ratifies this Convention agrees to bring the provisions of Articles 1, 2, 3, 4, 5, 6 and 7 into operation not later than 1st January, 1924, and to take such action as may be necessary to make these provisions effective.

ARTICLE 12.

Each Member of the International Labour Organization which ratifies this Convention engages to apply it to its colonies, possessions and

protectorates, in accordance with the provisions of Article 421 of the Treaty of Versailles and of the corresponding Articles of the other Treaties of Peace.

ARTICLE 13.

A Member which has ratified this Convention may denounce it after the expiration of ten years from the date on which the Convention first comes into force, by an act communicated to the Secretary-General of the League of Nations for registration. Such denunciation shall not take effect until one year after the date on which it is registered with the Secretariat.

ARTICLE 14.

At least once in ten years, the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall consider the desirability of placing on the Agenda of the Conference the question of its revision or modification.

ARTICLE 15.

The French and English texts of this Convention shall both be authentic.

Texts of Recommendations

Following are the texts of the Recommendations of the Conference as issued by the International Labour Office:—

Recommendation concerning the Development of Technical Agricultural Education

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Third Session on 25th October, 1921, and

Having decided upon the adoption of certain proposals with regard to the development of technical agricultural education which is included in the fourth item of the agenda of the Session, and

Having decided that these proposals shall take the form of a Recommendation,

adopts the following Recommendation, to be submitted to the Members of the International Labour Organization for consideration with a view to effect being given to it by national

legislation or otherwise, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace.

The General Conference of the International Labour Organization recommends:

That each Member of the International Labour Organization endeavour to develop vocational agricultural education and in particular to make such education available to agricultural wage-earners on the same conditions as to other persons engaged in agriculture;

That each Member of the International Labour Organization send a report to the International Labour Office at regular intervals containing as full information as possible as to the administration of the laws, the sums expended, and the measures taken in order to develop vocational agricultural education.

Recommendation concerning the Prevention of Unemployment in Agriculture

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Third Session on 25th October, 1921, and

Having decided upon the adoption of certain proposals with regard to the prevention of unemployment in agriculture, which is included in the third item of the Agenda of the Session, and

Having decided that these proposals shall take the form of a Recommendation,

adopts the following Recommendation to be submitted to the Members of the International Labour Organization for consideration with a view to effect being given to it by national legislation or otherwise, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace.

I.

The General Conference of the International Labour Organization,

Considering that the draft Convention and Recommendations concerning unemployment adopted at Washington are in principle applicable to agricultural workers, and recognizing the special character of unemployment in agriculture,

Recommends that each Member of the International Labour Organization should consider measures for the prevention of or providing against unemployment amongst agricultural workers suitable to the economic and agricultural conditions of its country, and that it

should examine particularly from this point of view the advisability:—

(1) of adopting modern technical methods to bring into cultivation land which is at present not worked or only partially developed, but which could by such means be made to yield an adequate return;

(2) of encouraging the adoption of improved systems of cultivation and the more intensive use of the land;

(3) of providing facilities for settlement on the land;

(4) of taking steps, rendering work of a temporary nature accessible to unemployed agricultural workers by means of the provision of transport facilities;

(5) of developing industries and supplementary forms of employment which would provide occupation for agricultural workers who suffer from seasonal unemployment, provided steps be taken to ensure that such work is carried on under equitable conditions;

(6) of taking steps to encourage the creation of agricultural workers' co-operative societies for the working and purchase or renting of land; and of taking steps to this end to increase agricultural credit especially in favour of co-operative agricultural associations of land workers established for the purpose of agricultural production.

II.

The General Conference recommends that each Member of the International Labour Organization furnish the International Labour Office with a periodical report dealing with the steps taken to give effect to the above Recommendation.

Recommendation concerning Social Insurance in Agriculture

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Third Session on 25th October, 1921, and

Having decided upon the adoption of a proposal with regard to the protection of agricultural workers against sickness, invalidity and old age which is included in the fourth item of the Agenda of the Session, and

Having decided that this proposal shall take the form of a Recommendation,

adopts the following Recommendation, to be submitted to the Members of the International Labour Organization for consideration with a view to effect being given to it by national legislation or otherwise, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding parts of the other Treaties of Peace.

The General Conference of the International Labour Organization recommends:

That each Member of the International Labour Organization extend its laws and regulations establishing systems of insurance against sickness, invalidity, old age and other similar social risks to agricultural wage-earners on conditions equivalent to those prevailing in the case of workers in industrial and commercial occupations.

Recommendation concerning Night Work of Children and Young Persons in Agriculture

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Third Session on 25th October, 1921, and

Having decided upon the adoption of certain proposals with regard to the employment of children and young persons in agriculture during the night, which is included in the third item of the Agenda of the Session, and

Having decided that these proposals shall take the form of a Recommendation,

adopts the following Recommendation, to be submitted to the Members of the International Labour Organization for consideration with a view to effect being given to it by national legislation or otherwise, in accordance with the

provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace.

The General Conference of the International Labour Organization recommends:

I.—That each Member of the International Labour Organization take steps to regulate the employment of children under the age of 14 years in agricultural undertakings during the night in such a way as to ensure to them a period of rest compatible with their physical necessities and consisting of not less than 10 consecutive hours.

II.—That each Member of the International Labour Organization take steps to regulate the employment of young persons between the ages of 14 and 18 years in agricultural undertakings during the night in such a way as to ensure to them a period of rest compatible with their physical necessities and consisting of not less than 9 consecutive hours.

Recommendation concerning Night Work of Women in Agriculture

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Third Session on 25th October, 1921, and

Having decided upon the adoption of certain proposals with regard to the night work of women in agriculture, which is included in the third item of the Agenda of the Session, and

Having decided that these proposals shall take the form of a Recommendation,

adopts the following Recommendation, to be submitted to the Members of the International

Labour Organization for consideration with a view to effect being given to it by national legislation or otherwise, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace.

The General Conference of the International Labour Organization recommends:

That each Member of the International Labour Organization take steps to regulate the employment of women wage-earners in agricultural undertakings during the night in such a way as to ensure to them a period of rest compatible with their physical necessities, and consisting of not less than 9 hours, which shall, when possible, be consecutive.

Recommendation concerning the Protection before and after Childbirth of Women Wage-earners in Agriculture

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Third Session on 25th October, 1921, and

Having decided upon the adoption of certain proposals with regard to the protection before and after childbirth of women and wage-earners in agriculture, which is included in the third item of the Agenda of the Session, and

Having decided that these proposals shall take the form of a Recommendation,

adopts the following Recommendation, to be submitted to the Members of the International Labour Organization for consideration with a view to effect being given to it by national legislation or otherwise, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace.

The General Conference of the International Labour Organization recommends:

That each Member of the International Labour Organization take measures to ensure to women wage-earners employed in agricultural undertakings protection before and after childbirth similar to that provided by the Draft Convention adopted by the International La-

bour Conference at Washington for women employed in industry and commerce, and that such measures should include the right to a period of absence from work before and after childbirth and to a grant of benefit during the said period, provided either out of public funds or by means of a system of insurance.

Recommendation concerning Living-in Conditions of Agricultural Workers

The General Conference of the International Labour Organization of the League of Nations,

employers' and workers' organizations concerned, if such organizations exist.

II.

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Third Session on 25th October, 1921, and

That such measures shall apply to all accommodation provided by employers for housing their workers either individually, or in groups, or with their families, whether the accommodation is provided in the houses of such employers or in buildings placed by them at the workers' disposal.

Having decided upon the adoption of certain proposals with regard to the living-in conditions of agricultural workers, which is included in the fourth item of the Agenda of the Session, and

III.

Having decided that these proposals shall take the form of a Recommendation,

adopts the following Recommendation, to be submitted to the Members of the International Labour Organization for consideration with a view to effect being given to it by national legislation or otherwise, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace.

The General Conference of the International Labour Organization recommends:

I.

That each Member of the International Labour Organization, which has not already done so, take statutory or other measures to regulate the living-in conditions of agricultural workers with due regard to the special climatic or other conditions affecting agricultural work in its country, and after consultation with the em-

ployers' and workers' organizations concerned, if such organizations exist.

(a) Unless climatic conditions render heating superfluous, the accommodation intended for workers' families, groups of workers or individual workers, should contain rooms which can be heated.

(b) Accommodation intended for groups of workers shall provide a separate bed for each worker, shall afford facilities for ensuring personal cleanliness, and shall provide for the separation of the sexes. In the case of families, adequate provision shall be made for the children.

(c) Stables, cowhouses and open sheds should not be used for sleeping quarters.

IV.

That each Member of the International Labour Organization take steps to ensure the observance of such measures.

Recommendation concerning the Application of the Weekly Rest in Commercial Establishments

The General Conference of the International Labour Organization of the League of Nations,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Third Session on 25th October, 1921, and

Having decided upon the adoption of certain proposals with regard to the Weekly rest day in commercial employment, which is included in the seventh item of the Agenda of the Session, and

Having decided that these proposals shall take the form of a Recommendation,

adopts the following Recommendation, to be submitted to the Members of the International Labour Organization for consideration with a view to effect being given to it by national legislation or otherwise, in accordance with the provisions of Part XIII of the Treaty of Versailles and of the corresponding Parts of the other Treaties of Peace.

The General Conference recommends:

ARTICLE 2.

ARTICLE 1.

That each Member of the International Labour Organization take measures to provide that the whole of the staff employed in any commercial establishment, public or private, or in any branch thereof, except as otherwise provided for by the following paragraphs, should enjoy in every period of seven days a period of rest comprising at least twenty-four consecutive hours.

It is further recommended that this period of rest should, wherever possible, be granted simultaneously to the whole of the staff of each establishment, and that it should, wherever possible, be fixed so as to coincide with the days already established by the traditions or customs of the country or district.

That each Member take the steps necessary to secure the application of this Recommendation and to define any exceptions which the Member may consider to be necessary.

If exceptions are found necessary, it is recommended that the Member should draw up a list of such exceptions.

ARTICLE 3.

That each Member should communicate to the International Labour Office the list of the exceptions made in pursuance of Paragraph 2, and thereafter every two years any modifications of this list which it shall have made in order that the International Labour Office may present a report thereon to the International Labour Conference.

IMPORTANT JUDICIAL DECISIONS RESPECTING PICKETING

Decisions of the Superior Court of Quebec and the Supreme Court of the United States

TWO important legal decisions have been recently delivered with regard to the picketing of factories during strikes, one in the Superior Court of Quebec, District of Montreal, and the other in the Supreme Court of the

United States. In both cases suits had been brought by employers to maintain injunctions enjoining trade unions and their members from interfering with their employees or picketing the premises. These decisions are given below.

Superior Court of Quebec enjoins strikers from unlawful picketing

On November 9, 1921, a general strike was declared in Montreal by the International Ladies' Garment Workers' Union. Pickets were established at the various factories to induce the workers to join the strikers. On November 16, Mr. H. Rother, owner of one of the factories affected, obtained an interim injunction restraining the union and its members from unlawfully picketing his establishment. The case was then heard on its merits in the Superior Court, and on December 16 judgment was delivered by the Honourable Justice F. S. MacLennan maintaining the injunction and defining the rights and duties of both parties in this matter.

The complete text of the judgment was as follows:

The plaintiff is a manufacturer of ladies' clothing at No. 24 McGill College Avenue, in the City of Montreal, employing about fifty workers, men and women, five or six of whom have written contracts for a definite term, the balance being employed on weekly engagements terminable on a week's notice. The week's work is from Monday to Saturday. Not more than half a dozen of the workers are members of the local unions of the International Ladies' Garment Workers' Union, defendant herein. Plaintiff has carried on his business as an open shop for a number of years.

Early in November, 1921, the Union decided to call a general strike, and sent out a printed circular addressed to all

men and women workers in the cloak and suit industry stating that, on November 9th, 1921, at 10 a.m., a general strike would commence, "which will be energetically carried on until we realize our just demands," and among the demands stated is "absolute and full recognition of the Union, as without it there can be no peace in the industry." The circular closes with the exhortation "on with the fight; quit the shops to the last man; be united and the bosses will be compelled to yield and recognize our just demands." This circular was distributed to the workers in about forty factories in the City of Montreal, over 1,200 of whom went out, including two from plaintiff's factory and about 1,000 of these went to a mass meeting at the Union headquarters, where verbal instructions for picketing were issued to them by the defendant Joseph Schubert, the secretary of the joint board of the local unions. Schubert testified that every striker was a picket and that his instructions to them were:—to walk up and down around the factory and in its neighbourhood to try and see the people who go in and out and inform them the strike was on and to try and induce those coming out of the factory to strike also; to visit the homes of workers, if they thought well to do so, and to speak to them on the street between their homes and the shop and to try and follow the employees of plaintiff in order to persuade them to leave their work. The strikers started to parade up and down in front of plaintiff's factory on 9th November, the day the strike was called, and continued until the evening of November 16th, when an interim order of injunction was issued on plaintiff's application. Ten to fifteen pickets appeared at first, but their number on the following day was thirty or forty, and afterwards was increased to probably seventy-five. On November 8th, the Union sent written notice to plaintiff, that a strike had been called for the following day, and, as plaintiff feared that his workers might be troubled, he secured the service of two or three private detectives and, later, he called upon the police authori-

ties of the City of Montreal for protection. The working hours in plaintiff's factory were from 8 a.m. to 5 p.m., and large numbers of strikers, on picket duty, were present in the neighbourhood of plaintiff's factory, in the morning before the workers arrived, and in the afternoon as they left the factory. On 10th November, shortly after 5 o'clock in the afternoon, when, according to some witnesses, thirty or forty, and according to others, seventy-five strikers were on picket in front of plaintiff's factory, as the workers were coming out, a violent assault was committed by strikers on plaintiff's manager, and resulted in the arrest of three strikers. The defendants at the trial attempted to establish that this assault was provoked by the conduct of the manager, but having heard the whole of the evidence on that subject and from the manner in which the different witnesses testified, in my opinion, the assault was unprovoked and without justification. The workers were leaving the factory and some were jostled by strikers and the assault was part of the disorderly tactics adopted by the strikers. On November 11th, plaintiff's designer was assaulted on the street on his way to work by a member of the Union who called him a scab and said he was taking his bread away from him, and when the designer complained to the defendant Goldberg, the business agent of the Union and the supervisor of the strike, all the satisfaction he got was to be told there was a strike on and that anybody who worked for plaintiff was a scab. Two of the girl workers were informed by strikers, on their way home from their work and at their home, that it would be better not to work as there was danger and there might be trouble. These two girls were so alarmed by what had been said to them and by the crowd of pickets, that they stayed away from their work for half a day. Another girl worker was followed on her way home by a man who spoke to her about her work and finally hit her in the face and knocked her down. Another worker was threatened by a striker, that if he did not stop work and go to the Union some accident

might happen to him and he might have to go to the hospital, while another going in the factory, on the morning of the strike, was asked to stop work and go to the Union, and, on coming out, the same striker gave him a blow on the body with his elbow. This workman was frightened at first but did not stop work. One of the plaintiff's cutters was induced by strikers to go to the Union headquarters where he was told that he might work for a day or two and, if he did not stop then, he would be brought out, put away and would not be able to come in again. On account of the large number of strikers in the vicinity of plaintiff's establishment, the assaults which had been committed and the threats which had been made, the plaintiff had to provide escorts for a number of his workers between their homes and his establishment. Some had to be sent home in taxis, others had to leave by the back door. After the assault on plaintiff's manager, the defendants issued a special circular to plaintiff's workers, in abusive and threatening language, for the obvious purpose of intimidation. A captain and sergeant of the Montreal police have sworn that at times seventy-five strikers were in front of plaintiff's establishment. The sergeant heard a threat by a striker that some one would go to the hospital, and he warned some of the pickets that their action amounted to intimidation and that the picketing was not peaceful, and defendant Goldberg was told by the police not to allow his men to carry on such tactics. The captain of police swore that the pickets were present in greater number than would seem to be necessary and people could not pass comfortably on the sidewalk, as the strikers were impeding the traffic. The situation was such that, on the afternoon of 14th November, the police authorities closed the street in front of plaintiff's establishment and allowed no one to approach except those who had business there. The police cordon was discontinued on the 15th and the picketing continued. On 16th, plaintiff instituted his action for damages and injunction, and obtained an interim order of injunc-

tion restraining defendants, their officers, members, agents and representatives from molesting or in any way interfering with plaintiff, his servants and employees or prospective employees, and from in any way picketing in front or in the neighborhood of his place of business, or from besetting or watching his place of business, residence or the residences of his employees, or from persistently following his employees or prospective employees, with a view to intimidate the latter or any of them from entering or returning to his employ until otherwise ordered by the Court.

By his action plaintiff alleges that, on or about 10th November, 1921, the defendants organized a strike amongst the employees engaged in the manufacture of ladies' garments in the City and District of Montreal, and have ordered and are endeavouring to induce his employees to cease working for him and, as a result, a number have left his employ and have failed to return, causing him loss and damage, and that there is great danger that a large number of his employees, through defendants' intimidation, will be obliged to leave his employ; that defendants, by means of intimidation and by threats of causing bodily harm and violence to plaintiff and his employees, have endeavoured and are endeavouring to prevent said employees from continuing their work, and by means of organized methods of picketing plaintiff's place of business and the homes of his employees have intimidated his employees and prospective employees from entering his employ; that a number of his employees have been assaulted, molested and intimidated by defendants and members of the Union; that defendants have caused and are causing him great and irreparable injury and damages in connection with his business, and he concludes for judgment against defendants for \$10,000 and an injunction, with costs.

The defendants by their defence admit the issue of the strike call which applies to the business of plaintiff and to others of a similar nature; that all such employees as have left plaintiff in

response to the said call did so without compulsion and in their own interest; that defendants deny practising intimidation or molestation, and if plaintiff has suffered damage, such damage is not irreparable and is attributed solely to his own act; the defendants admit picketing plaintiff's place of business and the homes of some of his employees; that such acts of violence as may have developed during the strike have been isolated acts of individuals committed contrary to defendants' instructions, and in most cases under provocation received from plaintiff, his employees, strike breakers, plain clothes men, or police acting under his instructions and for whom he is responsible; that the issue of the strike call and picket are lawful acts from which defendants cannot be restrained by process of law, and, as to acts of violence committed by individual strikers contrary to instructions, plaintiff has other and better recourses at civil and criminal law, and the allegations of the declaration are false, insufficient and irrelevant and the action is not founded in law and fact, and defendants pray for its dismissal with costs.

It seems to me very important that, in conflicts between employers and their workers, all parties to the strife should know the law affecting it and that every person concerned should be strictly kept within its bounds. The plaintiff was at liberty to earn his own living and run his business in his own way, provided he did not violate some special law prohibiting him from so doing and did not infringe the rights of other people. This involved the liberty to deal with other persons who were willing to deal with him and to engage all workers who were willing to work for him on the conditions and for the rates of pay which he was willing to give. This liberty is a right recognized by law, and its correlative obligation is the general duty of every one not to prevent the free exercise of this liberty without justification. The workers had the right, if they chose, to work for him, and any interference with their liberty to deal with him affects him. If such interference is

justifiable in point of law, he has no redress, but if wrongful and he suffers damages as the direct consequence of what has been done, he has recourse in law against the persons causing the interference or responsible for it.

In *Allen vs Flood*, 1898, A.C. 92, Lord Watson, said:—

Any invasion of the civil rights of another person is in itself a legal wrong carrying with it liability to repair its necessary or natural consequences insofar as these are injuries to the person whose right is infringed.

This is the same principle of law as is contained in our Civil Code, 1053:—

Every person capable of discerning right from wrong is responsible for the damage caused by his fault to another, whether by positive act, negligence, neglect or want of skill.

This is a principle of universal or natural law adopted by all civilized countries.

Employees have a right not to work; they have a right to join a trades union. A combination not to work is lawful, but a combination to prevent others from working is *prima facie* unlawful. A workman has a right in his own interest to peaceably persuade another workman or a body of workmen to legally terminate their contracts of employment and to cease work, but he has no right, by coercion or intimidation, to persuade workmen not to work or to cease working.

The remaining question is, whether the conduct of defendants, as established by the evidence in this case, infringes the plaintiff's rights so as to give him a cause of action in the civil courts of this Province? The object of the defendants was the improvement of the position of the members of the Union, which was a lawful object, and the question to be decided here is, whether or not, in the pursuit of that lawful object, they resorted to practices prohibited by the civil law or the criminal law, or by both? I have already referred to plaintiff's right to carry on his business without interference or annoyances which would cause him damage and give him a right of action under 1053 of the Civil Code. Section 501 of

the Criminal Code makes it unlawful, among other things, to wrongfully and without lawful authority, with a view to compel any other person to abstain from doing anything which he has a lawful right to do, or to do anything from which he has a lawful right to abstain, to (a) use violence to such other person; (b) intimidate such other person by threats of using violence to him; (c) persistently follow such other person about from place to place; (e) with one or more other persons follow such other person in a disorderly manner in or through any street or road; (f) beset or watch the house or other place where such person resides, or works, or carries on business, or happens to be. The Imperial Conspiracy and Protection of Property Act, 1875, section 7, from which the above section is substantially reproduced, contained a proviso not found in the Criminal Code, that attending merely to obtain or communicate information shall not be deemed watching or besetting. It is significant that this proviso, in favour of obtaining and communicating information which was introduced in Canada in 1876 by 39 Vic., ch. 37, sec. 2, and R. S. C. 1886, ch. 173, sec. 12, was omitted from the Criminal Code, and it seems to indicate the intention of Parliament by its omission to be that attending for the purpose of obtaining and communicating information would not deprive watching and besetting of its wrongful character. This proviso remained in force in the Imperial Act until its repeal in 1906. The provisions of section 7 have been the subject matter of appeal to the Courts in a large number of cases in England, and the construction placed upon it is helpful in construing and determining the meaning and scope of section 501 of the Criminal Code. I will refer to a few only of the English cases.

In 1896, the Court of Appeal considered *Lyons & Son vs. Wilkins*, 65 L.J. Ch. 601, where it was held that:—

Picketing—that is, watching or besetting the house or place of business, or the approach thereto, of any person, within the meaning of section 7, sub-section 4, of the Conspiracy and

Protection of Property Act, 1875,—excepting when such picketing is for the limited purpose of obtaining or communicating information, according to the proviso to that section, is illegal, and will be restrained by interlocutory injunction.

Lindley L. J., page 607, said:—

Trade unions up to a certain point have been recognized now as organs for good. They are the only means by which workmen can protect themselves from the tyranny of those who employ them. But the moment that trade unions become tyrants in their turn, they are engines of evil. I repeat, they have no right to prevent people from working on any terms that they choose.

Page 608.

In this particular case there were four men picketed, two at a time—that is to say—relays of two. They were not there merely to obtain or communicate information, but to put pressure upon the plaintiffs by persuading people not to enter into their employment; that is “watching or besetting” within sub-section 4, and is not “attending in order merely to obtain or communicate information.” Under these circumstances, I think that the defendants have gone beyond what the Act of Parliament authorizes; and I do not hesitate to say that this is a case in which, from the necessity of the thing, a quick remedy is actually and absolutely required.

That leads me to the second point, which is that we ought to leave the plaintiffs to have recourse to the summary jurisdiction of a magistrate. I do not think so. This is obviously a case in which a man's property, his trade, his livelihood, and the goodwill of his business will be absolutely ruined if what is complained of is not peremptorily stopped. And it appears to me that, according to the well-known principles upon which the Court of Chancery has been guided, it is a case in which a person's property and trade are so interfered with that he may come to the Court for the protection which an injunction affords him.”

In *Lyons & Sons vs. Wilkins*, (No. 2) 68 L.J. Ch. 146, C.A. 1898, Lindley M.R., at page 151, said:—

The truth is that to watch or beset a man's house with a view to compel him to do or not to do what is lawful for him not to do or to do is wrongful and without lawful authority, unless some reasonable justification for it is consistent with the evidence. Such conduct seriously interferes with the ordinary comfort of human existence and ordinary enjoyment of the house beset, and such conduct would support an action on the case for a nuisance at common law.—Proof that the nuisance was “peaceably to persuade other people” would afford no defence to such an action. Persons may be peaceably

persuaded provided the method employed to persuade is not a nuisance to other people.

Chitty L. J., at page 152, said:—

The sole question is whether upon the facts the case is brought within section 7. To bring a case of watching or besetting within the section it must be shown that the watching or besetting was done with a view to compel a person to abstain from doing or to do any act which such person has a legal right to do or abstain from doing. That the watching and besetting were done with that view is found by the Judge and not disputed. "View" does not import motive. It imports purpose. Speaking for myself, I prefer standing by the words which the Legislature has thought fit to employ. The acts complained of were done with the view stated in the section.

It will be seen that the Court of Appeal held that the watching and besetting was wrongful because of the violation of the Statute of 1875, and because it was common law nuisance, that is, because the means of compulsion were both a crime and a tort. In that case there were only four pickets in relays of two at a time.

The House of Lords, in *Quinn vs. Leatham*, 70 L.J.P.C. 76, approved the decision of the Court of Appeal in *Lyons & Son vs. Wilkins* and held that a conspiracy to injure, if there be damage, gives rise to civil liability, and an oppressive compulsion differs widely from an invasion of civil rights by a single person; it is a violation of right to interfere with contractual relations recognized by law if there be no justification for interference; this principle cannot be confined to inducements to break contracts of service; if such wrongful interference with a man's liberty of action is intended to injure and in fact damages a third party, such third party has a remedy by action, and annoyance and coercion by many may be actionable where like conduct on the part of one person would not be so.

Lord Lindley, at page 95, said:—

What may begin as peaceable persuasion may easily become, and in trade union disputes generally does become, peremptory ordering, with threats, open or covert, of very unpleasant consequences to those who are not persuaded. Calling workmen out involves serious consequences to such of them as

do not obey. A combination to prevent others from working is a very different thing, and is *prima facie* unlawful. Again, not to work oneself is lawful so long as one keeps off the poor rates, but to order men not to work when they are willing to work is another thing. A threat to call men out given by a trade union official to an employer of men belonging to the union, and willing to work with him, is a form of coercion, intimidation, molestation, or annoyance to them and to him, very difficult to resist, and to say the least requiring justification. None was offered in this case. It is said that conduct which is not actionable on the part of one person cannot be actionable if it is that of several acting in concert. This may be so where many do no more than one is supposed to do. But numbers may annoy and coerce where one may not. Annoyance and coercion by many may be so intolerable as to become actionable, and produce a result which one alone could not produce.

Page 97.

The difference between an indictment for a conspiracy and an action for damages occasioned by a conspiracy is very marked and is well known. An illegal agreement, whether carried out or not, is the essential element in a criminal case. The damage done by several persons acting in concert and not the criminal conspiracy is the important element in the action for damages. The law relating to nuisances, to say nothing of the law relating to combinations, shows that many annoyances are actionable which are not indictable, and the principles of justice on which this is held to be so appear to me to apply to such cases as these.

The same principles were followed and injunction granted in *Larkin vs. Long*, 1915, A.C. 814; 84 L.J.P.C. 201.

In the Supreme Court of Canada, on an appeal from this Province in *Perreault vs. Gauthier*, 38 S.C.R. 253, Mr. Justice Girouard stated that, as Parliament had reproduced some Imperial Statutes, the jurisprudence of the English Courts is binding upon us in matters arising under these Statutes.

I will now refer to some Canadian cases on the subject:—

Krug Furniture Co. vs. Berlin Union of Amalgamated Wood Workers, 2 Commercial Law Reports 425, Meredith J. 1903.

Meredith J., at page 426, said:—

Every one who breaks any contract, or knowingly and for his own ends, without justification, procures any other person to break

any contract.....is guilty of a wrong, for which he is answerable in damages.

¶ All persons who make use of a public highway, or any other place, to the sensible discomfort of any person in the ordinary enjoyment of his house, or place of business, or to the injury of his property, are, ordinarily, guilty of a wrong, for which they are answerable in damages, and, from the continuance of which they may be restrained by injunction.

Page 429.

The defendants must be held to really intend that which is the plain effect of their actions—the injury of the plaintiffs by intimidation.

Cotter v. Osborne, C.R. (1911) A.C. 137.

Mathers J., at page 146, said:—

Picketing the plaintiffs' shops and other places where their men were employed for the purpose of persuading men not to work is also unlawful under section 501 of the Criminal Code.

In appeal, *Perdue J.*, at page 157, said:—

For a number of persons to combine together to procure others to break contracts is unlawful, and if such others are induced to break, and do break, their contracts, this constitutes an actionable wrong. This is now established law and I need only refer to *Quinn v. Leathem* (1901) A. C. 511; *Read v. The Friendly Society, Etc.*, (1902) 2 K. B. 732; *South Wales Miners' Federation v. Glamorgan Coal Co.*, (1905) A. C. 239. The last two cases also decided that it is no justification for the defendants to show that they were not actuated by malice or ill will against the persons injured by their acts, and that they only sought to further their own interests.

The picketing or besetting of the plaintiffs' shops, with the object of coercing employees or inducing them to cease working, is also unlawful; *Lyons v. Wilkins*, (1899) 1 Ch. 255, 68 L. J. Ch. 146; *Charnock v. Court*, (1899) 2 Ch. 35, 68 L. J. Ch. 550."

Leave to appeal to the Privy Council from this judgment was refused.

Vulcan Iron Works v. Winnipeg Lodge, 21 Manitoba Law Reports 473, C. A. 1911; Mathers J. held that, besetting and watching the premises of an employer by members of a trades union, if done in concert with a view to compel the employer to change the mode of conducting his business and to comply with their demands for better

pay by persuading men not to work for him, or to seek employment from him, especially when accompanied by some attempts at intimidation by threats of violence, amounts to a common law nuisance punishable in damages.

In that case an injunction was made perpetual and plaintiff was awarded damages, and the judgment of the trial Court was unanimously confirmed by the Court of Appeal.

In *Rex v. Russell*, (1920), 1 Weekly Western Reporter 640, which arose out of the Winnipeg strike, the Court of Appeal of Manitoba held that the provision formerly intended to protect peaceful picketing is not now found in the Criminal Code and that a striker has no more justification for picketing than he obtains by the right of every British citizen to go about his own business in a peaceable way. It is well known that an application for special leave to appeal from that decision to the Privy Council was refused. This appears to be the latest Canadian case on the subject of picketing.

The Court of Appeal of British Columbia in *Sleuter v. Scott*, 21 B.C.R. 155, in 1915, unanimously confirmed the judgment of the trial Court, holding that a combination of two or more, without justification or excuse, for the purpose of injuring a workman by inducing employers not to employ him, is, if it results in damage to him, actionable.

The Supreme Court of the United States in the *American Steel Foundries and Tri-City Central Trades Council* has just maintained an injunction against picketing, in which Chief Justice Taft said (New York Times Dec. 6th, 1921):—

In going to and from work, men have a right to as free passage without obstruction as the streets afford, consistent with the right of others to enjoy the same privilege. We are a social people and the accosting by one of another in an inoffensive way and offer by the one to communicate and discuss information with a view to influencing the other's action, are not regarded as aggression, or a violation of that other's right.

If, however, the offer is declined, as it may rightfully be, then persistence, importunity, and following do become unjustifiable annoyance

and obstruction which is likely soon to savor of intimidation. The nearer this is to the place of business, the greater the interference with the business and especially with the property right of access of the employer. Such an attempted discussion attracts the curious, or, it may be, interested bystanders. They increase the obstruction as well as the aspect of intimidation which the situation quickly assumes.

In the present case, under the conditions which the evidence discloses, all information tendered, all arguments advanced and all persuasion used were intimidation—they could not be otherwise.

It is idle to talk of peaceful communication in such a place and under such conditions. The numbers of the pickets in the groups constituted intimidation. The name "picket" indicated a militant purpose, inconsistent with peaceful persuasion. The employees were made to run the gauntlet. When one or more assaults or disturbances ensued, they characterized the whole campaign, which became effective because of its intimidating character, in spite of the admonitions given by the leaders to their followers as to lawful methods to be pursued, however sincere.

Our conclusion is that picketing thus instituted is unlawful and cannot be peaceable, and may be properly enjoined by the specific term of "picketing" because its meaning is clearly understood in the sphere of the controversy by those who are parties to it. We are supported in that view by many well-reasoned authorities, although there has been contrariety of view. A restraining order against picketing by that name will advise earnest advocates of labor's cause that the law does not look with favor on an enforced discussion of the merits of the issue between individuals who wish to work and groups of those who do not, under conditions which subject the individuals who wish to work to a severe test of their nerves and physical strength and courage.

Regarding as primary the rights of the employees to work for whom they will, and to go freely to and from their place of labor, and keeping in mind the right of the employer incident to his property and business to free access of such employees, what can be done to reconcile the conflicting interests.

Each case must turn on its own circumstances. It is a case for the flexible remedial power of a court of equity which may try one mode of restraint, and if it fails or proves to be too drastic, may change it.

The appeal came to the Supreme Court of the United States from the Federal Circuit Court of Appeals of Illinois, 238 Federal Reporter 728, where the case is fully reported.

I have referred to what I consider to be the law on this subject and to jurisprudence showing how the law has been interpreted and applied and I

come back to the question: Were the means used by defendants lawful? All the surrounding circumstances have to be taken into consideration. There was peace in plaintiff's factory up to 9th November, when the strike was called by defendants' circular to the workers in the industry exhorting them to "quit the shops to the last man, be united and the bosses will be compelled to yield and recognize our just demands" "as without it there can be no peace in the industry" and proclaiming that the Union intended to energetically carry on the strike until their aims were realized. That was a plain declaration of war against all who failed to comply with the Union's demands and an attempt to form a combination of union and non-union workers for the purpose of compelling the employers to submit to the dictation of the Union. The circular calling out the workers was couched in language calculated to intimidate and coerce workers and employers alike and to incite violence, and went far beyond a peaceable argument for any lawful claims which could be advanced in the interest of the Union or its members. It was a direct invitation to breach of contracts of engagement. Nearly all of plaintiff's workers were working under weekly engagements terminable on a week's notice. Only two left the plaintiff's factory, the balance wished to continue in his service. This was followed by instructions issued at the Union headquarters to a thousand strikers to go on picket around the factories in the industry. Pickets in large numbers were posted in the immediate vicinity of plaintiff's establishment, followed by acts of violence, threats of bodily harm and warnings of danger, the following of workers on the streets and to their homes, and requests to cease work and join the Union. These were overt acts committed by the defendants' pickets. The City police warned the pickets and the defendant Golberg, that their tactics were not peaceful but intimidating, and resulted in a police cordon closing the street in front of plaintiff's factory for part of a day. The public were ob-

structed in the free use of the sidewalk and plaintiff's workers had to run the gauntlet of passing through a line of pickets. Some of the workers had to leave by the back door to avoid molestation at the front and plaintiff had to engage private detectives to protect his workers, some of whom had to be conveyed to and from their work in taxis, and others had to be furnished with escorts to their homes. Plaintiff was put to expense in thus protecting his business and his workers. His freedom to carry on his business was infringed, and the interference and annoyances were serious and injurious to him as an employer of labour and as a manufacturer. It is idle for defendants to say that they only sought to further their own interests. They must be held to have intended what was the plain effect of their conduct. If things done or words spoken or written are such that they will excite fear or a reasonable apprehension of fear or danger and so influence those for whom intended as to prevent them from freely doing what they desire and the law permits, they may be restrained and the Courts are entitled to look beyond the mere letter of the act or word into its spirit and intent. It is apparent from the manner in which the strike was inaugurated and the subsequent picketing was conducted, with deliberate and relentless vigour regardless of annoyance and inconvenience to plaintiff and serious interference with his business, that the picketing was not for the purpose of peaceable persuasion, but for the purpose of compulsion by coercion and intimidation and that the means adopted were not lawful or justified and went beyond anything permitted by the civil or criminal law. The massing of a large number of pickets is in itself intimidating to workers, and, as Chief Justice Taft, says, the name "picket" indicated a militant purpose inconsistent with peaceful persuasion. The strong persistent and organized picketing, making the condition of plaintiff and his workers disagreeable and intolerable, accompanied by hints of injury, veiled threats, abusive and offensive language and

some instances of assault and personal violence—all of which conditions are shown in the evidence of this case—discloses conduct on the part of defendants which passed beyond that of the peaceful purpose of promoting the lawful aims of the Union and its members and entered the unlawful stage of wrongful injury, without just cause or excuse, to rights fully protected by the law and where picketing is carried on by intimidation, threats, coercion or violence—as has been done in this case—it has been held in every jurisdiction, where the question has been raised, that such conduct on the part of pickets is unlawful and will be enjoined.

I am of the opinion that the picketing carried on by defendants and their pickets was wrongful and without lawful authority and amounted to a common law nuisance and violation of 1053 of the Civil Code, as well as a breach of the criminal law.

Counsel for defendants submitted that, if the conduct of the pickets and strikers was a violation of the Criminal Code, the plaintiff should be limited to his remedy before the Criminal Court and that he had no remedy by injunction. In my opinion, that proposition is untenable. In every jurisdiction where this question has arisen the right to injunctive restraint has been recognized. In our Courts the same right has been frequently applied where there has been violation of 1053 of the Civil Code and the remedy in damages was inadequate. The Union defendant has no property in Canada and a judgment for damages against it would be useless. The defendants threaten to continue and repeat the wrongful acts complained of and damages for injuries already suffered even if collected would not protect plaintiff in the future. It is apparent that the only adequate and effective remedy to meet the circumstances disclosed in this case is to permanently enjoin the defendants from their unlawful conduct under all the penalties provided by law.

(Signed) F. S. MACLENNAN,
J.S.C.

United States Supreme Court defines lawful and unlawful picketing

In connection with a strike conducted by the Tri-City Trades Council against the American Steel Foundries of Granite City, Illinois, the employers obtained an injunction against the Trades Council to restrain them from picketing. The Federal Court of Appeal of Illinois set aside this injunction and the employers appealed to the Supreme Court of the United States.

In the judgment of the Supreme Court the appeal of the employers was sustained and a definition was given of what constitutes lawful and unlawful picketing. The injunction forbids the union in any manner whatsoever by use of persuasion, threat or personal injury, from interfering with any person engaged in the employ of the American Steel Foundries in connection with its business or with any person desiring to be employed by the foundries, from congregating in the neighbourhood of the foundries for the purpose of aiding or encouraging others in these things and for maintaining at or near the premises any pickets to interfere with the foundries in the free and unrestricted control and operation of its plant.

With regard to this injunction Chief Justice Taft said in part:

"This is a picketing case. Only two men in the employ of the foundries had responded to the calling of the strike by the Tri-City Council. They were picketers, were defendants, and were enjoined. Only one of them was a member of a union of that council. The case involves, as to them, the application of Section 20 of the Clayton Act, of which the provisions material here are those which forbid an injunction in behalf of an employer against, first, persuading others by peaceful means to cease employment and labour; second, attending at any place where such person or persons may lawfully be for the purpose of peacefully obtaining or communicating information; third, peacefully assembling in a lawful manner and for lawful purposes. The Act emphasizes the

words 'peaceable' and 'lawful' throughout the phrases which were used. We do not think that these declarations introduced any new principle into the equity jurisprudence of the Federal courts. They are merely declaratory of what was the best practice always...If in their attempt at persuasion or communication, those of the labour side adopt methods which, however lawful in their announced purpose, inevitably lead to intimidation and obstruction, then it is the court's duty—and the terms of Section 20 do not modify this—so to limit what the propagandists do as to time, manner and place as to prevent infractions of the law and violations of the right of the employees and of the employers for whom they wish to work. In going to and from work, men have a right to as free passage without obstruction as the streets afford, consistent with the right of others to enjoy the same privilege. We are a social people and the accosting by one of another in an inoffensive way and offer by the one to communicate and discuss information with a view to influencing the other's action, are not regarded as a violation of that other's rights. If, however, the offer is declined, as may rightfully be, then persistence, importunity and following do become unjustifiable annoyance and obstruction which is likely soon to savour of intimidation. The nearer this is to the place of business, the greater the interference with the business and especially with the property right of access of the employer.....It is idle to talk of peaceful communication in such a place and under such conditions. The number of the pickets in the groups constituted intimidation. The name 'picket' indicated a militant purpose, inconsistent with peaceful persuasion. The employees were made to run the gauntlet. When one or more assaults or disturbances ensued, they characterized the whole campaign, which became effective because of its intimidating character, in spite of the admonitions given by the

leaders to their followers as to lawful methods to be pursued, however sincere. Our conclusion is that picketing thus instituted is unlawful and cannot be peaceable, and may be properly enjoined by the specific term of 'picketing' because its meaning is clearly understood in the sphere of the controversy by those who are parties to it. . . A restraining order against picketing by that name will advise earnest advocates of labour's cause that the law does not look with favour on an enforced discussion of the merits of the issue between individuals who wish to work and groups of those who do not, under con-

ditions which subject the individuals who wish to work to a severe test of their nerves and physical strength and courage. But while this is so, we must have every regard for the Congressional intention manifested in the act to the principle of existing law which it declared that ex-employees and others properly acting with them shall have an opportunity, so far as is consistent with peace and law, to observe who are still working for the employer, to communicate with them and to persuade them to join the ranks of his opponents in a lawful, economic struggle."

FORM OF INJUNCTION AS ISSUED AGAINST U.M.W. OF A. DECLARED ILLEGAL ON APPEAL

IN the issue of the LABOUR GAZETTE for November, 1921, on page 1372, an account is given of the issuing of an injunction in the United States District Court, Indiana, ordering the discontinuance by coal mine operators of the "check-off" system of collecting union dues and prohibiting the unionization of mines. On application to the United States Circuit Court of Appeals at Chicago by the United Mine Workers of America, this injunction was suspended and a final decision with regard to it was given by this court on December 15. The opinion of the Court was in part as follows:—

"The Borderland Coal Corporation sought and obtained a decree enjoining the performance of the existing contracts between the operators and their union employees in the Central Competitive Field with respect to what is called the 'check-off' provision. So far as the contracts themselves and this record discloses, the 'check-off' is the voluntary assignment by the employee of so much of his wages as may be necessary to meet his union dues and his direction to his employer to pay the amount to the treasurer of his

union. In that aspect the contract is legal; and quite evidently there are many lawful purposes for which dues may be paid.

"If nothing else should prevent the Borderland Coal Corporation being given that part of the decree now under consideration [the check-off], the lack of injury to the Borderland Coal Corporation by the existence of the 'check-off' contracts would suffice. The injury to the Borderland Coal Corporation property rights in interstate commerce of which the Borderland Coal Corporation was apprehensive was that it would be coerced into paying the high cost of production prevalent in the Central Competitive Field and thus be unable to meet, or at least to meet so profitably, the existent competition in interstate commerce. As long as the Borderland Coal Corporation is assured, as it now is, that it will have full protection in operating its closed non-union mine and in marketing its coal in interstate commerce without interference, the Borderland Coal Corporation should rather pray that all the elements causing the high cost of pro-

duction in the Central Competitive Field should be maintained.

"From the record as it now stands, we are convinced that the District Court committed errors in exercising its judicial discretion in the following particulars:

"(1) In not confining the grant of relief to appellee. [The Borderland Coal Corporation.]

"(2) In not limiting the prohibiting of the unionization or attempted unionization of the appellee's mines to the threatened direct and immediate inter-

fering acts shown by the bill and affidavits.

"(3) In not limiting the prohibition of the sending of money into West Virginia to the use thereof in aiding or promoting the interfering acts.

"(4) In enjoining the performance of the existent 'check-off' contracts in the Central Competitive Field.

"The decree should be recast, and for that purpose the cause is remanded with the direction to the District Court to enter preliminary injunctive decree which shall be in consonance with this opinion."

RECENT LABOUR LEGISLATION IN BRITISH COLUMBIA

THE British Columbia Legislature enacted several important measures relating to labour during the second session of 1921, which began on October 18, and concluded on December 3. The acts passed in the course of the first session were reviewed in the LABOUR GAZETTE for June, 1921, (page 784). It will be remembered that a series of measures were passed at the first session, in order to give effect as far as possible to the so-called "Washington Conventions", or recommendations of the first meeting of the International Labour Organization (League of Nations), these acts, however, to come into force concurrently with the enactment of similar measures by the other provinces. During the second session bills were introduced to have these acts made operative in 1922, but only one of these bills was enacted, namely, that to amend the Maternity Protection Act, this act now coming into force on January 1, 1922. (The other acts referred to are the Employment of Children Act, the Hours of Work Act, the Night Employment of Women Act, and the Night Employment of Young Persons Act.)

A number of important amendments were made to the Mothers' Pensions Act. The administration of the Act was placed in charge of the Workmen's Com-

pensation Board instead of being as under the original act assigned to a minister specially designated to this duty. Domicile in Canada was added as a qualification on the part of the husband of a woman benefitting under the Act, such domicile being required at the time of his death, or of his commitment to a penitentiary or asylum for the insane, or of his total disablement, or of his desertion of his wife. Any other cases than those specially provided for may be assisted at the discretion of the Board. The functions of the Superintendent of Neglected Children under the original act were also transferred to the Workmen's Compensation Board. The Board is further given the right of appointing local advisory boards, which were previously appointed by the Lieutenant-Governor in Council. The revising Act came into force by proclamation, on December 9, 1921.

Several amendments were made to the Boilers' Inspection Act. "Certificates" as defined by the act now include engineers' certificates as well as certificates of inspection issued by inspectors. In the definition of low pressure heating plant the maximum allowable working pressure for cast iron boilers is raised from five to ten pounds per square inch. All railway locomotives are now

exempted from the provisions of the act, and boilers or steam heating plants of a capacity not exceeding 30 square feet of heating surface are also exempt. Every person buying, selling or exchanging a boiler must now notify the chief inspector by registered letter. The new act further revises the regulations governing the erection and equipment of boilers and safety-valves; no certificate issued under this section is transferable. A new scale of fees for the examination of engineers is fixed as follows: \$15 for first class, \$10 for second, \$7.50 for third, \$5 for fourth class and for special certificates, and \$2.50 for temporary certificates. Third-class engineers are now authorized to take charge of a condensing steam plant up to 225 horse power, or, if acting as assistants, up to 750 horse power. A fourth-class engineer may act as assistant on any steam plant up to 375 horse power. New regulations are made regarding registration, and a new scale of yearly fees is established. It is provided that the Crown shall have a lien as a first charge upon any steam boiler for the amount of fees due.

An amendment to the Mechanics Lien Act eliminated the clause which required that any person claiming a lien for material supplied must give at least ten days' notice in writing of intention to deliver such a claim. The time limit for the claiming of a lien for materials supplied is fixed at thirty-one days after

completion of the contract between the contractor and the owner, or the contractor and sub-contractor. The Attachment of Debts Act, which was amended at the first session by the raising of the amount of wages exempted from \$40 to \$60, was further amended by a supplementary act bringing the schedule into line with the act in its amended form. The 1920 amendment to the Weekly Half-holiday Act of 1916, requiring shops to close on the regular public holidays, was revised so as to apply to shops which must under the Act be closed on any half-holiday. Such stores must also close on any additional public holidays appointed by proclamation, penalties being provided for offences under this section. A new section was added to the British Columbia Railway Act requiring street railway companies before introducing into their systems street cars operated by one man to obtain first the consent of the Minister of Railways, the minister being required to consult with the officials of the municipalities affected before sanctioning "one-man cars." All employers are required under the Income and Personal Property Tax Act to furnish annually to the Surveyor of Taxes a list of those employed by him during the preceding calendar year, with the amount of wages paid to each employee. Some amendments were made in The Co-operative Associations Act of 1920.

FURTHER ORDERS OF MINIMUM WAGE BOARD OF ONTARIO

SUMMARIES of order issued by the Ontario Minimum Wage Board affecting (a) laundries (b) retail stores and (c) certain specified industrial establishments have appeared in the September and December, 1921, issues of the LABOUR GAZETTE. Further orders issued during December by the Minimum Wage Board now complete the series of orders governing minimum rates of wages for women employed in the following industrial establishments

in the various cities and towns of the province:—confectionery, biscuits, candy, chocolate, grocers' specialties, jam, gum, pickles, crushed fruits, etc.; paper boxes, corrugated paper boxes, paper bags, envelopes, manufacturing stationery, tags and cheque books, etc.

The provisions of the first order of this series, applying to such industrial establishments in Toronto, were outlined in the September, 1921, issue of the LABOUR GAZETTE (page 1156). The

new orders, three in number, relate to the above-mentioned industries respectively in cities of more than 50,000 population (excepting Toronto), in cities and towns of more than 5,000 and less than 50,000 population, and lastly in places in Ontario other than cities or towns of more than 5,000 population.

In all the four orders females of 18 years or over are classed as adults, but special rates are allowed for inexperienced workers over 18, as well as for young girls under 18. The period of training for the latter class is limited to 18 months, divided into three periods of six months each. Any female employee, however, who has been working a year or more in the industry before reaching the age of 18 years will be considered experienced on reaching that age, or if she reaches the age of 18 before completing a year's training, she will be considered experienced on the completion of the year's training. "In no case," it is provided, "shall any employee of 18 years or over be paid less than the rates for inexperienced adults."

The number of inexperienced adults or young girls in any establishment must not exceed one-third of the total female working force, and the number of inexperienced adults and young girls together must not exceed one-half of the

total female working force. Temporary employees whose term of employment is less than one month are not included in this calculation. Neither does the rule apply to plants where the female force is four or less.

The wage rates provided may be averaged for any piece-worker over a period of three months, or where employment has been for less than three months, for the length of her employment. At least 80 per cent of the piece-workers in any establishment must receive wages at or above the prescribed rates.

Any violation of these orders is punishable by fine of not more than \$500 and not less than \$50 or by imprisonment for a term ranging from 2 to 6 months. Each establishment is required to keep a copy of the order governing its operations posted in a conspicuous place. (The Factory, Shop and Office Building act, as amended during the 1921 session of the Legislature, charges factory inspectors with the duty of reporting to the Board any violation of this section.)

The minimum wages as fixed for the various classes of female employees in the orders regulating the industries above mentioned are set forth in the following table:—

TABLE OF MINIMUM WAGES FOR FEMALES EMPLOYEES IN CERTAIN INDUSTRIAL ESTABLISHMENTS IN ONTARIO.

	Minimum Weekly Wage						Maximum number of learners allowed.
	Skilled adults	Adult learners		Minors			
		1st 6 mos.	2nd 6 mos.	1st 6 mos.	2nd 6 mos.	3rd 6 mos.	Adults, or Minors*
In Toronto.....	\$12.50	\$ 10.00	\$11.00	\$8.00	\$9.00	\$10.00	one-third
In cities of more than 50,000 population, excepting Toronto.....	11.50	9.50	10.50	8.00	9.00	10.00	one-third
In cities of more than 5,000 and less than 50,000.....	11.00	9.00	10.00	7.00	8.50	10.00	one-third
In all of Ontario excepting towns and cities of over 5,000 population.....	10.00	8.00	9.00	6.00	7.50	9.00	one-third

*The number of inexperienced adults and young girls together must not exceed one-half of the total female working force.

CANADIAN IMPORTS AND EXPORTS

THE Dominion Bureau of Statistics has issued a summary of the trade of Canada during the years ended September 30, 1919, 1920 and 1921. The value of the imports for consumption during the twelve months ended September 30, 1921, was as follows:

Vegetable products	\$205,939,957
Animal products	45,568,513
Fibres and textiles	140,348,352
Wood and paper	45,294,989
Iron and its products	165,439,295
Non-ferrous metals	38,441,130
Non-metallic minerals	189,966,847
Chemical products	25,463,979
Other commodities	58,414,994
Total	\$905,878,056

The total imports for consumption for 1919 amounted to a value of \$886,139,956, and for 1920 to \$1,325,779,894.

The exports during the past year were of the following values:

Vegetable products	\$449,427,264
Animal products	160,834,713
Fibres and textiles	10,402,086
Wood and paper	212,719,883
Iron and its products	47,492,595
Non-ferrous metals	33,958,295
Non-metallic minerals	29,575,900
Chemical products	12,583,604
Other commodities	19,066,315

Total exports (Canadian) \$976,060,660

Foreign exports 15,396,622.

The total exports of Canadian products for the two previous years were \$1,210,541,387 in 1919, and \$1,208,919,175 in 1920.

In the past year the imports for consumption from the United Kingdom amounted to \$137,623,435 and from the United States to \$643,625,678; the exports of Canadian produce to the United Kingdom amounted to \$285,017,699 and to the United States to \$428,593,374.

ORDER-IN-COUNCIL OF ONTARIO GOVERNMENT RESPECTING UNEMPLOYMENT RELIEF

ON December 13, 1921, the Ontario government issued an order-in-council outlining definitely their policy with regard to unemployment relief. This policy is in agreement with the proposal of the Honourable Gideon D. Robertson, former Minister of Labour, as outlined in a public statement issued on October 6, 1921, and confirmed by Order-in-Council P.C. 3831, dated October 7.

The Ontario government's order states that the Ontario government will pay one-third of the estimated extra cost of work undertaken by the municipalities for relief purposes between December 13, 1921, and April 15, 1922, provided the federal government and the municipalities concerned pay the other two-

thirds in equal proportions. The following are some of the more essential regulations governing all such municipal work as may be undertaken:

Estimates of normal cost to be submitted to and approved by the provincial government;

Estimates of the cost in excess of normal cost to be submitted to and approved by the provincial government;

The provincial government to bear equally and jointly with the municipalities and the federal government the actual expenditure over and above the estimated normal cost, but not to exceed one-third of the estimated extra cost as a result of proceeding with the work under winter conditions.

No payment to be made in respect of any work done or materials used after April 15, 1922. Work undertaken but not completed by the above date to be paid for in the proportion that the expenditure at that date bears to the approved estimates;

That the offices of the Employment Service of Canada be used wherever practicable as a means of registration and placement of all workers who are engaged for relief work as above defined.

At a conference held by the Ontario government in Toronto on Thursday, January 5, 1922, at which the federal Department of Labour and several of the larger municipalities of the province

were present, the Ontario government agreed to share in equal proportion with the federal government and the municipalities any relief granted by the municipalities to married men and families where work could not be provided. Such relief is to consist of food, fuel, boots and shoes and underwear. The municipalities are to undertake the administration of this relief. This arrangement to be in effect from December 13, 1921, to April 15, 1922.

The matter of furnishing relief to single men is to be considered by the Ontario government at an early date, and their policy in this regard will be announced immediately the Cabinet deals with the question.

PROVISION FOR DEPENDANTS OF UNEMPLOYED WORKERS IN GREAT BRITAIN

AMONG the recent measures enacted by the British Parliament with a view to relieving the distress caused through unemployment was the Unemployed Workers' Dependants (Temporary Provision) Act which became law on November 8, 1921. This Act, which is designed to help those people who remain unemployed during the coming winter, provides for the payment of allowances toward the maintenance of their dependants for a period of six months from November 10, 1921.

To finance the scheme a compulsory levy is made upon workers and employers coming under the Unemployment Insurance Act, and the fund thus raised is assisted by grants from the State. Men contribute 2d. and women and boy and girl workers one penny a week to the fund while employed. Employers add an equal amount in each case and the State 3d. per week in the case of men and 2d. in the case of women and young persons. Contributions are payable from November 7, 1921, to May 7, 1922. Provision is made, however, for extending this period, if necessary,

to ensure the solvency of the fund. All contributions are made in the same way and at the same time as the contributions under the Unemployment Insurance Act, a single stamp representing the combined value of both contributions being affixed to the Unemployment Books.

Out of the Unemployed Workers' Dependants Fund married workers receive grants of 5s. per week in addition to the 15s. payable under the state insurance scheme and 1s. per week for each dependent child. The grants may be obtained only by unemployed workers who are in receipt of unemployment benefit under the Insurance Acts of 1920-21. No grant is payable in respect of a wife or woman dependant who is herself in receipt of this benefit, or who is in regular wage earning employment or engaged in any business or other occupation carried on for profit. A woman claimant may obtain a grant for her invalid husband if he is prevented by mental or physical infirmity from supporting himself and is being maintained wholly or mainly by his wife. Both men

and women may claim grants in respect of children under the age of 14, who are maintained wholly or mainly at the claimant's cost. In the case of children under full time instruction at a day school, the maximum age is 16 instead of 14. Grants may be made for step-children or adopted children as well as for claimant's own children.

The final decision on claims to grants

rests with the Minister of Labour who has, however, the power to refer cases to the Local Employment Committees for consideration and examination. In practice it is thought that such reference will be regularly made, and a memorandum outlining some of the leading principles upon which decisions should be based has been issued for the guidance of the Committees.

INDUSTRIAL STATISTICS FOR THE WESTERN PROVINCES, 1919

THE Dominion Bureau of Statistics has issued a preliminary report on industrial statistics of the four western provinces of Manitoba, Saskatchewan, Alberta and British Columbia for the year 1919. In these provinces there were in all 6,599 industrial establishments representing a capital investment of \$482,498,201. The salaried employees numbered 13,084, and received

in salaries a total of \$21,182,522. The employees on wages numbered 86,410 with wages totalling \$97,392,944. The total cost of materials used in these establishments amounted to \$283,179,527, and the value of their products was \$550,672,135. The following table contains statistics for each of the four provinces:

		Manitoba.	Saskatche- wan	Alberta	British Columbia
Establishments.....	No.	1,622	1,534	1,379	2,064
Capital invested	\$	111,535,665	35,869,588	66,673,667	268,419,281
Employees on salaries.....	No.	4,038	1,524	2,242	5,280
Salaries paid.....	\$	6,677,005	2,210,038	3,420,999	8,874,480
Employees on wages.....	No.	23,315	7,953	10,755	44,387
Wages paid.....	\$	24,311,147	9,226,936	11,765,069	52,089,792
Cost of materials.....	\$	90,539,234	36,937,613	55,758,141	99,944,539
Value of products	\$	153,003,614	59,752,486	94,855,759	243,060,276

In Manitoba, the industry with the greatest number of employees was car repairing in which there were engaged 12 establishments with 4,540 employees who received a total of \$5,692,998. There were 110 establishments engaged in housebuilding with capital of \$4,092,124, and 3,208 employees receiving \$3,836,-879. The greatest investment of capital was in the slaughtering and meat packing industry, in which 7 establishments had an investment of \$9,059,507, nearly one-quarter of the capital invested in all the industries combined. In

this industry there were 1,547 employees who received \$1,777,194 in salaries and wages. The cost of material amounted to \$19,495,412 and the value of products was \$27,289,172.

In Saskatchewan also car repairing was the largest industry; 33 establishments with 1,894 employees receiving \$2,620,816 were engaged. Electric light and power plants numbering 61 led in the capital invested which amounted to \$6,758,769. Forty-seven flour and grist mills, with a capitalization of \$4,888,-051, led all other industries in the cost

of materials and value of products which amounted respectively to \$15,-318,858 and \$17,673,125.

In Alberta, the industry of car repairing was also the greatest in respect to the number of employees. There were 22 establishments in this industry having 2,613 employees who received in salaries and wages \$3,232,780. In capital invested and value of products the most important industry was that of slaughtering and meat packing. In this industry there were engaged 7 establishments with a capitalization of \$17,598,-091 with 1,635 employees receiving in salaries and wages \$2,147,919. The cost of materials amounted to \$17,274,045 and the value of products amounted to \$29,157,117. Other important industries were flour and grist mills of which there were 49 with a capitalization of \$8,401,-666 and 571 employees receiving \$723,-920 in salaries and wages with the cost of materials amounting to \$18,534,986 and a value of products amounting to \$21,297,786.

By far the largest industry in British Columbia was that of lumbering. There were 258 establishments dealing in log

products with a total capitalization of \$59,341,040. There were 17,462 employees engaged in this industry who received in salaries and wages \$20,268,-591. The cost of materials used amounted to \$20,989,990, and the value of the products to \$60,444,053. The next largest industry (except with respect to capital invested) was that of shipbuilding in which there were engaged 14 establishments with a capitalization of \$6,541,003 and 8,102 employees receiving in salaries and wages \$11,163,190. The cost of materials used amounted to \$13,562,426 and the value of the products to \$34,477,510. Another large industry was that of fish preserving. There were 104 canneries, with a capitalization of \$16,358,305, employing 1,891 persons who drew salaries and wages amounting to \$1,818,531. The cost of materials used in these canneries amounted to \$10,895,617, and the value of their products was \$18,629,627. Three smelters capitalized at \$29,120,459 employed 2,224 men who received \$3,312,-128 in salaries and wages. The value of the products of these smelters amounted to \$13,930,515.

DECISIONS OF THE UNITED STATES RAILROAD LABOUR BOARD RESPECTING WAGES AND WORKING CONDITIONS

Proposed Changes in Wage Rates in Canada and the United States

THE United States Railroad Labour Board on November 29, 1921, issued an order with respect to railway shops covering rules and working conditions not previously dealt with or not fully covered in previous orders. In Decision No. 119, (Dockets 1, 2 and 3) dated April 14, 1921, the Board had set July 1, 1921, for the termination of the rules and working conditions in force since 1918 under agreements between the United States Railroad Administration and various organizations of employees,

and had also directed the railroad operating companies and organizations of employees to negotiate new agreements and bring before the Board those matters upon which they could not agree, as provided under the Transportation Act, the Board undertaking to promulgate rules, etc., as soon after July 1 as possible. This order was accompanied by a statement of principles upon which the agreements should be based (LABOUR GAZETTE, July, 1921, pp. 906-916). On June 1 in Decision No. 147 (Docket

353) the Board authorized decreases in rates of wages ranging between 5 per cent and 18 per cent, estimated to average 12 per cent of the railroad pay rolls, effective from July 1, 1921. On June 27, 1921, the Board issued an order stating that while agreements had been reached upon all points in some cases, none had been reached in a considerable number, and it appeared that the rules governing payment for overtime were in most cases those upon which agreement had not been effected. Therefore in Addendum No. 2 to Decision No. 119 it was ordered that all overtime should be paid at the *pro rata* rate except where agreements as to overtime payment had been reached or in cases where rates higher than *pro rata* had been paid prior to the issue of any general order by the United States Railroad Administration, that is, prior to the McAdoo award. All other rules as to working conditions were to be unchanged, except where new rules had been made by agreement, until such time as rules covering disputed cases should be considered and decided by the Board.

On August 11, 1921, the Board issued Decision No. 222 (Docket 475) promulgating certain rules to be effective from August 16, 1921, and on October 8 issued Addendum No. 3, thereto promulgating other rules to be effective from October 16, 1921, and on November 29, 1921, issued Addendum No. 6, to Decision 222 covering the remainder of the rules as to working conditions in railroad shops, the complete set of rules under Decision No. 222 and the Addenda thereto being printed in one document for ready reference. These rules therefore are to be in effect where rules as to working conditions have not been agreed upon between the railroad operating companies and the representatives of the employees concerned.

On December 12 in Decision No. 501, effective from December 16, 1921, the Board promulgated rules as to working

conditions for maintenance of way employees among whom were to be included signal men and certain classes of employees formerly included in shop crafts agreements. The principal feature of these rules is that while 8 hours is to continue as a day's work, for overtime work rates of pay higher than *pro rata* are not to be paid until after 10 hours.

As stated in the LABOUR GAZETTE for November, pp. 1387-9, the principal railroad operating companies of the United States after the decrease of 12 per cent in July had proposed a further decrease in wages of 10 per cent, but after negotiations between the companies and employees and the Railroad Labour Board it was arranged that the proposed further reduction in wages would not be considered for some time, the unions withdrawing a strike order which had been authorized.

It has since been reported that the railroad companies again propose to reduce wages between 10 per cent and 12 per cent and will ask the Railroad Labour Board to approve of such decrease if the employees' representatives do not agree.

As conditions of railway employment in Canada are similar in many respects to those in the United States, the principal railways in Canada negotiated with their employees for a 12 per cent average reduction to take effect from July 16. Several Boards were established under the Industrial Disputes Investigation Act and one Board of Arbitrators was established under the Conciliation and Labour Act, reports of which were given in the LABOUR GAZETTE issues for November and December. As a result reductions of between 10 per cent and 12 per cent were made in rates of wages for most classes. Agreements were made in January providing that the rates so reduced should be permanent, subject to change after thirty days' notice by either party.

JOINT CONFERENCE OF ECONOMIC, POLITICAL SCIENCE AND SOCIAL SCIENCE ASSOCIATIONS

A JOINT convention of eight associations devoted to economics, sociology and kindred sciences met at Pittsburgh, Pennsylvania, on December 27 to 31. The organizations represented were the American Economic Association, the American Political Science Association, the American Sociological Association, the American Statistical Association, the American Association of University Instructors in Accounting, the American Farm Economics Association, the American Association of University Professors and the American Association for Labour Legislation. The Canadian Department of Labour was represented by Mr. Bryce Stewart, Director of Employment Service. A large variety of subjects were discussed, many of them bearing directly on industrial problems of the day.

The subject of unemployment was discussed at a session of the American Association of Labour Legislation. Professor Commons outlined the Huber bill for unemployment insurance and prevention, which is based on the assumption that industry can prevent unemployment to a very great extent, and that it will be induced to do so by the financial burden of unemployment compensation in the same way that accident compensation has resulted in increased industrial safety. The speaker stressed the necessity of employers taking action to safeguard their employees against the unemployment hazard, and pointed out that in general capital had failed to give security to the job as it had given security to investments. Mr. Henry S. Dennison, president of the Dennison Manufacturing Company, Framington, Mass., declared that experiment in his plant had led his company to provide a fund which was used to make and store goods when markets were dull. Mr. William J. Mack, Cleveland, impartial chairman of the

Ladies' Garment industry, described the insurance plan in operation in the garment trade in Cleveland, and expressed the opinion that it was the duty of manufacturers to adopt a programme that would fit the needs of their own industry so as to remove the menace of unemployment. Mr. Philip Murray, vice-president of the United Mine Workers of America, said that the coal industry was an example of faulty organization leading to enormous waste in production which was a heavy burden on all users of coal, as well as to chronic and severe unemployment.

At a joint meeting of the Economic Association, the Statistical Association and the Association for Labour Legislation, an address was delivered by Mr. E. H. Downey, Harrisburg, on "The Present Status of Workmen's Compensation in the United States." The speaker expressed the opinion that the scale of compensation was too low, saying "Taken on the whole, workmen's compensation in the United States probably does not exceed one-fourth of the pecuniary cost of the injuries which the liens profess to cover... Something less than full compensation for temporary injuries is justified on social grounds, since malingering would result from an attempt to pay full wages. But there is no economic justification for a maximum rate less than two-thirds of the wage-loss."

Two addresses were given on labour organization by Mr. William Leiserson, chairman of the Board of Arbitration, Men's Clothing Industry, New York, and Professor George E. Barnett, Johns Hopkins University. Mr. Leiserson, speaking on "Constitutional Government in American Industries" held that some form of constitutional government similar to that set up by trade agreements was necessary under any system of industry, for there will always be, if

not wage-earners, at least workers who must obey orders and directors or managers who will have authority to issue orders. "These occupations," he continued, "develop different points of view in the people who follow them, and those in the managerial group become psychologically unified into a social class with divergent views from those of the other, who likewise achieve a consciousness of kind. Unless the two classes jointly embody their ideas of the rights and privileges of individuals in the form of constitutions and law, those who have the power to command, whether in a government-owned, a co-operative or a privately owned industry, may act arbitrarily, and this is the absolutism against which workers rebel. . . . As long as the trade union remains an outside body there can be no question that the industry is an imperfect form of organization. But if, as the development of trade agreements and decisions under them seem to indicate, the union and its entire membership become one of the organs of the constitutional government in industry, then have we not here government in industry, then have we not here the promise of a more unified and more perfect form of industrial organization than has hitherto obtained?"

In discussing the present position of American Trade Unionism, Professor Barnett stated that, from figures which

he himself had compiled, trade union membership in the United States had increased from 500,000 to over 2,000,000 between 1897 and 1904; from 1904 to 1910 the membership oscillated around 2,000,000. Beginning in 1910 there was a pronounced upward movement to nearly 2,750,000, falling in 1914 to nearly 2,500,000. In 1915 a great movement began continuing in full force until 1920, when the number of trade unionists was only slightly short of 5,000,000. On account of the present depression, however, the speaker believed that there would be a fall in the membership of trade unions, with the exception of railway unions, that would far exceed the loss suffered in previous periods. The extent of the loss would depend largely on the tactical skill with which the unions are managed during the period of depression. With regard to railway unions he stated that the effect of continuance of government control was to protect them from the disintegrating influence of a time of depression and to extend certain rules which have been a powerful force in attracting and retaining members.

An interesting diversion took place on December 29 when about seventy members of the American Association of Labour Legislation visited the Carnegie steel plant at Bessemer.

FAIR WAGE CONTRACTS, DECEMBER, 1921

DURING December, the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to eight fair wage contracts, all of which were awarded by the Department of Public Works.

A statement was also received as to supplies ordered by the Post Office Department, subject to the regulations for the suppression of the Sweating System, the securing of fair wages, etc.

DEPARTMENT OF PUBLIC WORKS.

Painting of one-half (Canadian side) of steel highway bridge over St. John River, N.B., between St. Leonard's, N.B., and Van Buren, Maine. Name of contractor, E. A. Guimont, Grand Falls, N.B. Date of contract, December 9, 1921. Amount of contract, \$990.

Dredging of slips at foot of Queen and Princess streets, Kingston, Ont. Name

of contractor, The Frontenac Dredging Company, Limited, Kingston, Ont. Date of contract, December 15, 1921. Amount of contract, \$1 per cubic yard.

Dredging channel to government wharf and basin and removal of old piles and crib piers, Collins Bay, Ont. Name of contractor, The Frontenac Dredging Company, Limited, Kingston, Ont. Date of contract, December 15, 1921. Amount of contract, 50 cents per cubic yard.

Alterations and additions to Extension Hall and Pent House at Government Printing Bureau, Ottawa, Ont., Name of contractor, Jean Ernest Poirier, Ottawa, Ont. Date of contract, December 19, 1921. Amount of contract, \$7,488.

Construction of third section of jetty (Steveston Jetty) mouth of Fraser River, B.C. Name of contractor, J. S. Connell, Ltd., Vancouver, B.C. Date of contract, November 24, 1921. Amount of contract, unit prices.

Repairs to wharf, Sheguiandah, Manitoulin Island, Ont. Name of contractor, McNamara Brothers and Thornton, Sault Ste. Marie, Ont. Date of contract, December 21, 1921. Amount of contract, schedule of prices.

Repairs to town wharf, Parry Sound, Ont., (Trenton, Ont.). Name of contrac-

tors, R. G. Weddell and R. G. Saunders, Toronto, Ont. Date of contract, November 30, 1921. Amount of contract, lump sum \$4,792 and unit prices.

Reconstruction of wharf, Cowichan Bay, B.C. Name of contractor, Fraser River Pile Driving Company, Limited, New Westminster, B.C. Date of contract, November 30, 1921. Amount of contract, lump sum \$260 and unit prices.

POST OFFICE DEPARTMENT.

The following is a statement of payments made in December for supplies ordered by the Post Office Department, subject to the Regulations for the Suppression of the Sweating System, the securing of fair wages and the performance of work under sanitary conditions:

Nature of Order.	Amount of Order.
Making metal dating stamps and type, and other hand stamps, and brass rown seals.	\$1,249.67
Making and repairing rubber stamps, daters, etc.	428.26
Supplying mail bag fittings.	9,282.74
Making up and supplying letter carriers uniforms, etc.	27,619.58
Repairing letter boxes, etc.	160.00
Making and supplying stamping ink, pads, etc.	142.63
Satchels.	355.68
Scale repaired.	243.00
Mail bagging made up and supplied.	70,953.22

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Similar agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees, but verbal agreements are also included in the records, the latter being schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In the case

of each agreement the rates of wages for principal classes of labour are given, with other information of general interest.

Manufacturing—Foods

VICTORIA, B.C.—MASTER BAKERS, AND INTERNATIONAL BROTHERHOOD OF TEAMSTERS, CHAUFFEURS, STABLEMEN AND HELPERS No. 365. Agreement to be effective from July 1, 1921, to July 1, 1922.

All salesmen to be union members.

Minimum wage, per week—bakery salesmen \$27. Men without previous

experience, \$22 for a period not more than thirty days. Stablemen's wages to be settled between individual employers, union representatives and men affected. Wage scale to be subject to an adjustment every three months according to cost of living statistics furnished by the Department of Labour through the *Labour Gazette*.

Six days to constitute a week's work, day of rest to be Sunday. Sunday work, time and one-half.

Salesmen not to be required to deliver goods on Sunday; this stipulation not to apply to emergency deliveries for supply of sea-going vessels and of restaurants. Salesmen if required to work on holidays to receive an extra day's full pay or a day off in the same week. No reduction of pay for holidays.

No salesman to be discharged for upholding principles of organized labour.

One week's notice of discharge or leaving job to be given.

Hours per week, 50; weeks preceding holidays, 55; weeks following holidays, 45; overtime, time and one-half.

In event of any dispute arising, workmen of shop concerned, with assistance of union officials, to endeavour to effect a settlement with the firm. In case of failure, dispute to be referred to an arbitration committee consisting of two members of the Union and two of the Association, none of whom to be actual parties to the dispute, nor members nor employees of the firm involved. Committee to appoint an independent chairman not a member of the trade. Decision to be binding.

Printing and Publishing

BRANTFORD, ONT.—COMMERCIAL AND JOB PRINTING OFFICES, AND TYPOGRAPHICAL UNION No. 378. Agreement to be in effect from May 30, 1921, to September 30, 1922.

Minimum wages per week—Machine operators and floormen, day work, \$30.25; night work, \$32.25; Machinist-operators and foreman, \$33.

Hours per day, eight; four on Saturday, per night seven. Hours per week, days, forty-four, nights, forty-two. Overtime, day situations, until 11 p.m. time and one-half; night situations, time and one-half until 6 a.m. Thereafter in both cases, and also for holiday work, double time. News work, 48 hours per week.

Machine learners to be paid two-thirds scale when learning linotype or monotype machines. Full scale to be paid after four months.

Only union members to be allowed to handle type in departments controlled by Union.

Nothing in Agreement is to prevent superior workmen from getting a higher rate of pay, but no workman to work for less than prices herein specified.

Apprentices not to be under the age of fourteen years, and to have common school education. Apprentices to serve five years. One apprentice in an office for every three journeymen employed, at least one union member being employed in the composing room.

Scale for apprentices (commencing with the third year):—Per week—third year, \$9; fourth year, \$11; fifth year, \$13.

Apprentices to pay for and receive a course of instruction during last thirty months of apprenticeship.

Foremen to have right to discharge for incompetency, neglect of duty, violation of office rules, or Chapel or Union rules, or to decrease the force, such decrease being accomplished by discharging first the persons last employed. In case of increase in force, persons discharged to be reinstated in reverse order.

A standing committee to be appointed of two representatives of the job offices and two of the Union to deal with questions arising regarding the Agreement or any alleged violation thereof. If committee do not agree, question to be submitted to arbitration, one arbiter being selected from each party, and a third by them.

MOOSE JAW, SASK.—EMPLOYING FIRMS AND TYPOGRAPHICAL UNION No. 627.

Agreement in effect from November 1, 1921, to October 31, 1922.

A few changes have been made in the Agreement as previously in effect. (See the LABOUR GAZETTE for December, 1919, page 1484, and for August, 1921, page 1044.)

Wages: from November 1, 1921, to October 31, 1922—Newspaper workers, \$47 for 48 hours per week, day work; \$50 for 45 hours per week, night work. Book and job printers: \$43.10 for 44 hours per week, day work; \$48.85 for 44 hours per week, night work.

Book and job printers' hours on Saturday to consist of not more than four.

Apprentices on newspapers: Per week during third year, \$17; during fourth year \$22; during fifth year, first six months, \$28; last six months, \$33, night work \$2 extra per week. Apprentices to work same number of hours as journeymen.

Apprentices on book and job work: Per week—third year \$15.50; fourth year, \$20.50; fifth year, first six months, \$26; second six months, \$30. Night work, \$2 extra per week. Hours same as for journeymen.

REGINA, SASK.—CERTAIN LOCAL EMPLOYERS, AND INTERNATIONAL BROTHERHOOD OF BOOKBINDERS No. 205. Agreement to be in effect from May 1, 1921, to April 30, 1922.

Men's scale: Hours per week, forty-four. Wages, per week \$42. Overtime, first three hours, time and one-half, thereafter, double time; Sundays and holidays, double time.

Boys' scale: Wages: Range from \$10 per week for first six months to \$35 for eighth six months; thereafter not less than \$42. One apprentice to four journeymen.

Girls' scale: Hours per week, forty-four. Wages per week, \$20. Overtime, first three hours, time and one-half, thereafter double time. Sundays and holidays, double time. Minimum wages: Per week — first six months, \$10;

second six months, \$12; third six months, \$15; fourth six months, \$19; thereafter \$20. In the event of the new Winnipeg scale being not less than \$18 per 44 hour week for experienced bindery women, wages for same class in this Union to be not less than \$21 per 44 hour week. This to be retroactive to May 1, 1921.

In event of reduction of staff, last employed to be first discharged. In increase of staff persons displaced to be reinstated in reverse order.

In any misunderstanding, matter to be submitted to arbitration, one arbiter being selected by each side and a third by them, award to be final.

Manufacturing—Clothing

VANCOUVER, B.C.—CERTAIN LOCAL FIRMS AND JOURNEYMEN TAILORS' UNION OF AMERICA No. 178. In effect from August 1, 1921, with 30 days' notice of change.

Union shop to be maintained.

Minimum wages: Per hour—Tailors, 75 cents; helpers, 50 cents.

If apprentices are employed, this to be done by special arrangement with the Union.

Hours per week, 44, terminating at noon Saturday. Hours per day, eight. Overtime and holidays time and one-half.

Not more than four hours overtime in any one week, and not more than one hour on Saturday afternoon.

Work to be equally divided in the slack season. Work to be done on premises of employer. All shops to be sanitary. A union representative to have authority to enter and inspect any union shop in the early part of the week.

Miscellaneous Manufacturing

VANCOUVER, B.C.—CERTAIN LOCAL FIRMS AND CIGARMAKERS' UNION No. 357. Bill of Prices adopted November 1, 1921.

Clear Havana bill: from 4 to 5 inches in length, \$19 to \$23 per thousand. Seed binder, \$1 less than Havana binder. Seed and Havana, hand work, from 4½ to 5 inches in length, \$16 to \$19 per thousand. Seed and Havana, mould work, from 4¼ to 5 inches in length, \$14 to \$17 per thousand. Extra rates paid for cigars according to gauge.

Packers' Bill of Prices—Hand Shapers' work, per thousand \$1.65 to \$2.75. Clear Havana work, per thousand \$1.90 to \$2.75. Fancy work not covered by this bill, to be left to the executive board. Rights and lefts, 25 cents extra; two ribbons, 25 cents extra.

Special rates for shape cigars, and for certain fillers.

Cigarmakers who worked the previous week not to be discharged on Monday. Wages to be paid in shop weekly in cash.

Manufacturers not to sell non-union cigars at wholesale.

Manufacturers who do not employ a journeyman for his full time not to be allowed an apprentice. One apprentice for one man, two for ten. In addition one returned soldier may be employed for five men employed, two for twenty.

When journeymen are laid off apprentices to be laid off in proportion.

No new men to be hired while those in shop are working on a limit. No limit to be placed on one day's work.

When any shop has laid off for one week or more (or when men have been on a limit for two weeks or more) no new men to be hired until shop has worked for two full weeks, dating from commencement of week.

Building and Construction

LONDON, ONT.—MASTER PAINTERS' ASSOCIATION AND PAINTERS, DECORATORS AND PAPERHANGERS OF AMERICA No. 910. Agreement in effect from March 1, 1920, to March 1, 1922.

Minimum Wage: Per hour, 70 cents. Hours per day, eight. Sundays, double time; overtime, time and one-half.

Transportation time to be paid when work is beyond city limits. Men who cannot return every night to receive board also.

No work on Labor Day; holidays and Saturday afternoons, time and one-half.

Disputes to be referred to a board of arbitration of two from each party having power to appoint an independent chairman.

Proposed alterations to the Agreement to be submitted before December 1, in each year and to take effect, if agreed upon on March 1.

SAULT STE. MARIE, ONT.—BUILDERS' EXCHANGE AND BRICKLAYERS' AND MASONS' INTERNATIONAL UNION No. 16. Agreement to be in effect from March 1, 1921, to February 28, 1922.

Minimum Wage: Per hour \$1.02½. Foreman, not less than 10 cents above regular rate.

Hours per day, eight. Overtime, time and one-half. Sundays and holidays, double time.

Work before or after regular hours positively forbidden unless rendered absolutely necessary.

Only union members to be employed. Members to work only for contractors who are practical bricklayers or masons, unless contractor employs as foreman a practical mechanic and union member.

Apprentices to comply with constitution of Union.

Differences to be referred to a joint committee composed of practical men of the trade.

WINNIPEG, MAN.—TYNDALL STONE PRODUCERS' ASSOCIATION OF WESTERN CANADA AND JOURNEYMEN STONE CUTTERS' ASSOCIATION OF NORTH AMERICA, WINNIPEG BRANCH. Agreement to be in effect from August 29, 1921, to August 29, 1922.

Hours per day, eight, Per week, forty-four.

Wages: Per hour—Journeymen stonecutters, \$1.00 (carvers \$1.00 per day

extra) planer and lathe men, 90 cents per hour.

Extra fare to be paid when work is outside city. Travelling time to be considered equivalent to being on the job or shop. Men working out of town to have transportation, room and board paid up to one month.

Machine men to be allowed to work not more than one hour overtime in case of necessity at straight pay.

Two months' notice to be given if adjustment of wages be contemplated.

Transportation—Electric Railways

TORONTO, ONT.—TORONTO SUBURBAN RAILWAY COMPANY, AND MAINTENANCE OF WAY EMPLOYEES.. Agreement to be in effect from November 1, 1921, to November 1, 1922.

Hours per day, nine. Overtime, time and one-half. Time and one-half also for Sundays and holidays, except for patrolling track, when straight time only will be paid to men in their own sections. Work in another section will be overtime.

Employees called to work after close of regular working day to be paid a minimum of three hours straight time.

Employees detained for conveyance and while travelling on orders of the Railway to and from work after regular working hours, straight time.

Promotion by seniority, company having final right of selection.

Arrangement may be made for absence from work for attending Union meetings.

Wages: Section men, 38 cents per hour. Section foremen \$1.15 per month. Overtime *pro rata*.

Water Transportation

ST. JOHN, N.B.—ANCHOR DONALDSON LINE: CANADA STEAMSHIP LINES, LIMITED; CANADIAN GOVERNMENT MERCHANT MARINE, LIMITED; CANADIAN PACIFIC STEAMSHIPS, LIMITED; CUNARD LINE; DONALDSON LINE, LIMITED; ELDER-

DEMPSTER AND COMPANY, LIMITED; ELDERMAN-BUCKNALL STEAMSHIP CO. LIMITED; FURNESS, WITBY AND COMPANY, LIMITED; HEAD LINE; J. T. KNIGHT & COMPANY; NEW ZEALAND SHIPPING CO. LIMITED; THE ROBERT REFORD CO. LIMITED; THE ROYAL MAIL STEAM PACKET COMPANY; WILLIAM THOMPSON & COMPANY, LIMITED—WITH THE STEAMSHIP HORSE AND CATTLE FITTERS, SEALERS, LINERS AND CLEANERS' UNION, LOCAL 1039, INTERNATIONAL LONGSHOREMEN'S ASSOCIATION OF THE PORT OF ST. JOHN. Agreement to be in effect from December 1, 1921, to November 30, 1922, and from year to year unless thirty days' notice be given prior to the expiration of any one year.

Hours per day or night, nine.

Wages: Per hour, day work, 50 cents, night work, 75 cents. Sundays and holidays, such to consist of 24 hours, midnight to midnight, day work, double time; night work, double time and one-half. No work on Labour Day.

Double time to be paid for repairing oil or water tanks on board vessels with no hatch and entered by a manhole.

Men ordered for work during day or night to be allowed a minimum of two hours' pay except when weather conditions prevent working. Double time for work during any meal hour and for each succeeding hour until relieved. Men ordered to work on a ship in full stream to receive full time until put ashore again.

In case of any controversy arising over interpretation of any clause in the agreement, work to continue until controversy is adjusted if possible between a representative from each party. If no settlement is reached matter to be referred to arbitration board of three members, one appointed by each party and a third, a disinterested person, selected by them. If the two fail to agree on a chairman, a judge of the Superior Court to be asked to name one.

The Union not to try to uphold incompetency, shirking of or absence from work, pilfering or broaching of cargo.

ST. JOHN, N.B.—VARIOUS STEAMSHIP COMPANIES TRADING TO PORT OF ST. JOHN, AND INTERNATIONAL LONGSHOREMEN'S ASSOCIATION, LOCAL 273, GENERAL LONGSHOREMEN WORKERS. Agreement to be in effect from December 1, 1921, to December 1, 1922, and from year to year unless or until thirty days' notice be given prior to December 1 in any subsequent year.

Wages: Per hour, day or night, for handling general cargo, 55 cents; for handling bulk grain, 65 cents.

Same men not to be ordered back to work either day or night while other men are available, except when ship is within reasonable time of finishing or shifting from berth to berth.

Gang required to work through meal hour to be allowed double time prevailing rate until relieved.

Hours per day or night, nine.

Half time to be paid men for waiting when ordered out at 7 p.m. until midnight; and when ordered out again at 1 p.m., until knocking off time in the morning, double time—this also to apply when ordered to work during meal hours.

A minimum of two hours' pay to be allowed from time ordered out except when weather conditions prevent working.

Sundays and holidays, double time, midnight to midnight. Double time for Saturday half-holidays from June 1 to September 30.

No work on Labour Day except handling mails and baggage. Ten cents extra per hour for sulphur in bulk, salt in bulk, and wet hides in bundles, on week days, day or night.

Not less than six men to be employed in the hold of a deal boat when loading lumber out of lighters or cars. No man to stay in hold while grain is running. Freight trucked outside between sheds to have two men on truck.

Schedule of working conditions attached designates the quantities per sling of different cargoes.

ST. JOHN, N.B.—VARIOUS STEAMSHIP COMPANIES TRADING TO THE PORT OF ST. JOHN, ALSO THE VARIOUS COAL MERCHANTS OF ST. JOHN, AND THE COAL HANDLERS, TRIMMERS, LOADERS AND UNLOADERS OF ALL BULK CARGO, LOCAL 810, INTERNATIONAL LONGSHOREMEN'S ASSOCIATION. Agreement to be in effect from December 1, 1921, until December 1, 1922, and thereafter from year to year, unless or until either party serve thirty days' notice to the other party prior to December 1 of any subsequent year.

All men employed to be members of the union. If impossible to obtain sufficient men belonging to union, non-union men may be hired until union men are available, but not longer than to finish one ship.

Wages: Per hour—day work, 65 cents; night work, 85 cents.

All work performed under steam to call for six men or more. Waiting time: first hour, full time; thereafter, half time.

Sundays and holidays, double time. No work on Labour Day.

Men starting night shift to receive three hours' pay if work ceases at or before 10 p.m. If work continues after 10 p.m., men to be paid for first half night. If work commences at 1 a.m. or after, ceasing at 5 a.m., full time to be paid from 1 a.m. until 5 a.m. except when work is discontinued through stress of weather.

Work done from noon until 1 p.m.; 5 p.m. until 7 p.m.; midnight until 1 a.m.; 5 a.m. until 7 a.m., double time.

Foremen to be union members.

MIDLAND, ONT.—ABERDEEN ELEVATOR COMPANY, LIMITED, AND LOCAL 966, INTERNATIONAL LONGSHOREMEN'S ASSOCIATION. Agreement in effect from April 15, 1920, to April 15, 1922.

Employers agree to employ union men and not to discriminate against any members. Either party may apply for a board of arbitration to settle any dispute. Board to consist of one representative

appointed by each party and a third selected by them.

Hours of Labour, ten per day.

Wages: Per day—minimum, \$4.75; firemen, legmen, floormen, distributors, marine weighmen, towermen, \$5; millwrights, \$6; engineers, head weighmen, electricians, \$5.50; blacksmiths, \$5.25.

Overtime to midnight, and holidays, time and one-half; after midnight and Sundays, double time.

Only union men to be employed where such are available and competent.

VANCOUVER, B.C. — THE BALFOUR GUTHRIE DOCK COMPANY AND OTHER DOCK COMPANIES, AND THE WATERFRONT FREIGHT HANDLERS' ASSOCIATION, LOCAL 38-52, INTERNATIONAL LONGSHOREMEN'S ASSOCIATION.. Agreement to be in effect from October 7, 1921, until cancelled by 30 days' notice.

Wages: Per hour—Checkers, car-sealers, cranemen, straight time, 70 cents; overtime, \$1. Truckers, pilers, loaders, stowers, straight time, 60 cents; overtime, 90 cents. Men when handling high explosives, \$1.40 per hour, straight or overtime.

Hours per day, eight.

Overtime to mean all work between 5 p.m. and 8 a.m. and Sundays and holidays.

Work performed during the four meal times to be paid double the prevailing rate. Men ordered to work to be paid from time specified, the minimum amount paid being two hours' pay.

When men start, resume or continue work between 1 a.m. and 6 a.m., they shall receive not less than four hours' pay.

In cases of difference or dispute, work not to stop, but matter if not adjusted by men and officer of the company to

be referred to a representative of each party and if necessary a third party.

Public Utilities

MONTREAL, QUE.—MONTREAL LIGHT, HEAT AND POWER CONSOLIDATED AND THEIR MECHANICS EMPLOYEES, MEMBERS OF THE INTERNATIONAL ASSOCIATION OF MACHINISTS. Agreement to be effective from June 1, 1921, to June 1, 1922.

Hours per week, forty-four.

A man called from home after regular working hours to receive not less than five hours' pay.

Overtime, time and one-half. Holidays, double time.

Wages: Per hour—gas meter makers and repairers, 1st class, 70 cents (others to be classed as apprentices); mechanics 70 cents; mechanics specialists, including drill operators, turret lathe operators, using fixed tools, punch press operators and motor assemblers, 1st year, 52½ cents; 2nd year, 56 7/8 cents; 3rd year, 61¼ cents; labourers, 35 cents; apprentices, 27 3/8 to 43¾ cents. Piece work rates as in vogue May, 1921, to be decreased 12½ per cent.

Apprentices when engaged to be between 16 and 19 years of age; to serve four years. One for the shop, and one for every five journeymen. To be given every opportunity to become proficient in all branches. Mechanics or apprentices not to be required to operate more than one machine at a time.

In general reduction of the working force, seniority and efficiency to govern.

Grievances of a general nature may be presented before proper officers of the Company. If desired, an officer of the Company will meet a committee of the men.

Services

TORONTO, ONT.—KING EDWARD HOTEL COMPANY, TORONTO, AND ROYAL CON-NAUGHT HOTEL COMPANY, HAMILTON, AND LOCALS 300 AND 434, HOTEL AND RESTAURANT EMPLOYEES' INTERNATIONAL

ALLIANCE, AND BARTENDERS' INTERNATIONAL LEAGUE OF AMERICA. Agreement to be effective from May 15, 1921, to May 15, 1922.

Union agrees to furnish good craftsmen and to stand responsible for dishonesty. No union member to walk out before specified time has expired and without consent of person in charge. Employers to supply special uniforms free, if desiring such to be worn, and to hire only good standing members.

Business agent to be permitted to visit employees on duty.

Six days to constitute a full week's work. Nine hours to constitute a day's work. Overtime 50 cents per hour. No member to be permitted to work seven consecutive days.

No member to be dismissed without good reason.

Captains, waiters, waitresses and cooks to be good standing union members. Head waiters not to be compelled to be affiliated. Only one head waiter to an establishment.

No compulsory lay-offs.

No fines or charges to be levied against members for any reason. No member to do porter work except putting dining room in order for day or night.

Steady working waiters not to be permitted to work on suppers, etc., while outside help is available unless absolutely necessary and then to be paid as extra help.

Wages: Steady working members, captains, minimum of \$115 per month; steady captains working when off duty to be "extra" captains at \$3 for three hours or less, and 75 cents per hour before midnight. After midnight overtime at rate of \$1 per hour.

Steady working waiters, per month, \$60; waitresses, \$45. Steady working lunch waiters, minimum of \$9 per week of 6 days, with a check book. Private service waiter to mean bedroom service

only. Extra men working 9 hours or less with a check book, within a maximum period of 12 hours, \$3.50. Extra men for banquets, etc., 3 hours or less, with short jacket, \$2.50; with dress coat, \$3.00.

If required to set up or clear away during or before or after this period, 50 cents per hour in addition.

Cooks—not more than six consecutive days in a week; 9 hours in 13 consecutive hours to constitute a day's work. All cooks to be good standing members. Head and assistant chef not to be compelled to join union. Cooks hired through union office to join local 300 within two weeks. No cook to be discharged without good reason.

Minimum wage scale from May 15, 1921, to November 15, 1921, after which period a change not exceeding 10 per cent may be negotiated on 30 days' notice.

Per month—Sauce cooks, Head, \$140; others, \$80 to \$105; roast cook, \$125; other broilers, \$90 and \$100; fry cooks, \$120; assistants, \$85 to \$100; butcher, \$130; others, \$85; roundsman, \$125; others, \$80 and \$100; right chef, \$140; others, \$80 and \$115; pastry chef's assistants, \$90; ice cream man, \$100; assistants, \$85; baker chef, \$125; assistants, \$75 and \$90; baker, day, \$95; extra work cooks, \$3.50, \$4.50 and \$5.50 per day. Overtime, 60 and 75 cents per hour.

Extra work waiters, one meal of 3 hours or less with a check book, minimum rate of \$1.50.

Extra waiters, New Year's and Christmas Eves and Days, \$5 for 4 hours or less—other holidays, \$5 for 8 hours or less. Overtime, 75 cents per hour or fraction thereof.

Extra captains on above mentioned days, \$6 for 4 hours or less; other occasions, \$6 for 8 hours or less:

Waitresses: Steady waitresses working 3 meals per day, 8 hours or less with

a check book, \$45.90 per month. Extra waitresses working lunch, 3 hours or less with a check book, \$1.50; without a check book, \$2. Extra waitresses working banquets, 3 hours or less, \$1.50. Extra waitresses working overtime on luncheons or evening banquets, 50 cents per hour. Extra waitresses, afternoon tea, 3 hours or less, \$1.50. Steady wait-

resses taken off to serve a banquet or luncheon without a check book, \$1.50 above regular wages.

In case of dispute arising which cannot be settled satisfactorily by the parties, same to be referred to an arbitration committee of two members from each party and a fifth chosen by them.

PRICES, RETAIL AND WHOLESALE, IN CANADA, DECEMBER, 1921

THE feature of the prices movement for December was a slight upturn in the wholesale prices index number which had fallen steeply and steadily since May, 1920, although since June, 1921, the downward movement had been not so steep as from May, 1920, to June, 1921. The rise during December was due to advances in the prices of fodder, some animals and meats, dairy products, certain fruits, certain metals, and raw furs, while there were decreases in textiles, iron, and paints and oils. As compared with a year before all groups were lower except raw furs. The index figure for December was 230.7 as compared with 227.3 for November, 290.5 for December, 1920, 322.7 for December, 1919, 288.8 for December, 1918, and 137.6 for December, 1914.

A special index number of 50 important commodities including 20 foods, 15 raw materials and 15 manufactured goods, based upon prices in 1913, published in the LABOUR GAZETTE for July, was up to 150.0 for December, as compared 147.2 for November, 147.7 for October, 150.4 for September, 158.0 for August, 153.3 for July, 199.9 for December, 1920, and 260.5 for May, 1920.

In retail prices the average cost in sixty cities of a family budget of twenty-nine staple foods was \$11.00 as compared with \$11.08 in November, \$14.84 in December, 1920, \$14.73 in December, 1919, \$13.65 in December, 1918, and

\$7.96 in December, 1914. The chief changes for the month were seasonal increases in eggs and butter, with decreases in meats and nearly all the other items included. Fuel and rent were practically unchanged.

The table of retail prices and rentals shows the prices at the beginning of December of over one hundred staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of milk, bread and fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these have been published each month since the beginning of 1910, the figure being secured at the middle of each month by the correspondents of the LABOUR GAZETTE

resident in each locality from dealers who do a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915, when monthly publication of the budget in the LABOUR GAZETTE was begun, the list of foods included was increased to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts exclusively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts, with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, those being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into

account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the difference in quality. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc.; so that the comparative expenditure would be little changed.

The index number of wholesale prices is based on the quotations for 271 commodities and is the simple average of the percentages of current prices of the several commodities in relation to the average prices for the base period, 1890-1899, these being therefore made equal to 100. The quotations for most farm products are obtained weekly and averaged for the month; the quotations for other commodities are taken for the middle of the month. The table of index numbers shows the changes by groups and sub-groups for the previous month and for the corresponding months back to 1913.

In addition to the statistics as to retail prices of food and fuel, and as to rates for rent, the Department during 1920 and 1921 secured figures as to retail prices of staple lines of clothing, including footwear, from retail dealers throughout Canada, for each year back to 1913. The figures relate to prices prevailing at the end of the year in each case but since 1919 prices have been secured more frequently. From these quotations the percentages of changes in the cost of clothing have been calculated. Information was also secured as to the prices of household supplies, furniture, furnishings, etc., and an estimate has been made as to the percentage changes in the cost of miscellaneous items, the effect of the information gathered showing that such changes are approximately equal to the average changes in other items. The percentage changes in food, fuel, and rent have been calculated from the weekly budgets published in the LABOUR GAZETTE from month to month, and the accompanying table summarizes the changes from year to year by groups, the figures for each

group and for all items being weighted according to the family budget method. From July, 1920, to June, 1921, food and clothing prices fell steeply, and fuel slightly, while rent advanced. Food recovered in August and September, 1921, but by December was back to June levels. Clothing changed little on the average after June.

CHANGES IN THE COST OF LIVING IN CANADA
FROM 1913 TO 1921.

(Percentages of increase in cost by groups over 1913).

*Decrease.

Retail Prices

Meat continued to decline, sirloin steak averaging 26.7c. per pound as compared with 28.1c. per pound in November and 35.1c. in July. The decrease was fairly uniform throughout the Dominion. Round steak, rib roast, shoulder roast and stewing beef showed similar decreases. Veal averaged almost the same as in November. Mutton declined to about the same extent as beef, shoulder roast averaging 34.2c. per pound in December as compared with 24.6c. in November, and 32c. in March. Lamb showed a similar decline. Fresh roast pork averaged 26.5c. per pound in December as compared with 28.1c. in November, and 33c. in September. Pork chops and salt pork were slightly lower. Breakfast bacon averaged 3c. per pound lower for the month and 18c. per pound lower than in January. Boiled ham was 5c. lower at 61.3c. per pound. Fish, salt cod, boneless, averaged slightly higher. Finnan haddie and canned salmon were steady.

Eggs averaged 67.7c. per dozen for fresh as compared with 59.4c. in November, 33.5c. in June, and 85.2c. in January. Cooking eggs averaged 56.2c. per dozen as compared with 52c. in November, 30c. in June, and 75.7c. in January. Milk was higher in Quebec, St. Hyacinthe, St. John's, Montreal, Brockville, Cobalt, Prince Albert, but was lower in Hamilton and Saskatoon. Most of the changes were slight. The average price was 13.4c. per quart, the same as in November, the lowest price during the year being 13.1c. in July and the highest 15.5c. in January. In butter, creamery prints averaged 48c. per pound as compared with 46.8c. in November,

37.2c. in July, and 63.6c. in January. Old cheese averaged 32.7c. per pound as compared with 34.2c. in November, having fallen almost continuously since April, when the price was 39.8c. per pound. New cheese declined similarly, being 2c. to 3c. lower throughout.

Bread averaged 7.1c. per pound as compared with 7.3c. in November, 8.1c. in June, July and August, and 8.5c. in the early part of the year. Flour averaged 5.1c. per pound in December as compared with 5.4c. in November and 6.9c. in the early part of the year. Rolled oats, corn meal, pearl barley, and rice were also slightly lower. Canned tomatoes, peas, and corn were practically unchanged. Dried beans were slightly lower. Onions advanced, averaging 5.7c. per pound as compared with 6.7c. in November and 5c. in January. Potatoes averaged \$1.59 per bag as compared with \$1.65 in November, \$2.50 in September, and \$2.23 in January. Fresh apples and evaporated apples were slightly higher. Prunes were steady but raisins and currants were slightly lower. Jam and canned fruits declined slightly. Marmalade, corn syrup, and honey were lower. Granulated sugar averaged 9.5c. per pound as compared with 9.8c. in November, 10c. in August, and 12.3c. in January. Tea, coffee, and cocoa were practically unchanged.

Anthracite coal averaged \$17.62 per ton as compared with \$17.55 in November, \$17.62 in October, and \$20.00 in January. Bituminous coal averaged \$11.61 in December as compared with \$11.62 in November, having fallen gradually during the year from \$14.74 in January. Hard wood averaged \$12.97 per cord as compared with \$13.08 in No-

*December only.

vember, and \$14.00 in the early part of the year. Soft wood also declined. Rent was lower at Bathurst, N.B., and Thetford Mines, P.Q.

Wholesale Prices

GRAINS AND FODDER.—Wheat, Manitoba Northern No. 1, had risen from \$1.13 per bushel to \$1.18 at Winnipeg at the end of November, but early in December fell to \$1.07, later rising to \$1.13. Barley at Winnipeg was down from 57c. per bushel to 53c. and oats fell from 46c. to 42c. American corn advanced from 66c. per bushel to 70c. Flaxseed fell from \$1.73 per bushel at Winnipeg to \$1.69, but rose later to \$1.77. Rye rose at Toronto from 80c. to 86c. per bushel. Hay was steady but bran and shorts advanced \$5 per ton.

ANIMALS AND MEATS. — Cattle fluctuated slightly at both Winnipeg and Toronto averaging about the same as in November. Dressed beef advanced at Toronto from 10c. per pound to 12c. Hogs were down to \$8.25 per hundred pounds in November at Toronto, but rose to \$10.25 by the end of December. Dressed hogs advanced from 14c. per pound to 15c. Bacon and ham fluctuated but averaged about the same as in November. Lard and salt pork averaged slightly lower. Sheep advanced from \$4.00 per hundred pounds to \$5.00 but fell back to \$4.50. Mutton had fallen to 7c.-10c. per pound but advanced to 10c.-15c. Spring lamb advanced from 18c. per pound to 22c. Fowl advanced from 24c. per pound to 25c. Turkeys rose from 41c. per pound to 55c. but fell the last week to 48c.

DAIRY PRODUCTS. — Butter at Montreal rose from 40c. per pound to 41c.

but fell back the last week to 38c. At Toronto dairy prints dropped from 37c. to 36c. per pound. Eggs had risen to 85c. per dozen at Montreal but fell back to 80c. Storage eggs at Toronto advanced from 50c. per dozen to 52c.

FISH.—Prices for dried fish for export continued low. The price at Porto Rico, however, advanced \$2.00 per cask of 248 pounds, but the fall in the exchange offset the increase in the net returns to the exporter. Lunenburg Bank fish were selling at \$6.50 per quintal. The demand in the West Indies for pickled herring and mackerel continued poor. The demand for the United States markets was also light.

FRUITS AND VEGETABLES.—Winter apples were up to \$7.00-\$8.50 per barrel at Toronto. Lemons were lower at \$5 per box and oranges at \$6. Evaporated apples and currants were slightly higher. Potatoes were down to \$1.25-\$1.40 per bag at Toronto in small lots and \$1.00-\$1.10 in car lots at Montreal. Onions were up from \$4.50 per hundred to \$6.00.

MISCELLANEOUS FOODS.—Spring wheat flour advanced 10c. per barrel and winter wheat 25c. and 35c. Sugar fell 25c. per hundred pounds. Baking soda was slightly higher.

TEXTILES.—Woollen goods continued steady. Raw cotton was up to 18c. per pound at New York. Cotton goods averaged slightly higher. Raw silk continued to advance, Japan flatures rising from \$6.60 to \$7.50 per pound. Machine silk advanced \$1 per pound. Jute and hesians continued to decline. Flax fibre, sewing twine, and oil cloth declined.

HIDES, LEATHER, BOOTS AND SHOES.—Boots and leather were steady.

*Preliminary figures.

†Nine commodities off the market, fruits, vegetables, etc.

One line of spelter was dropped in 1915.

‡Number of commodities varies from month to month.

METALS AND IMPLEMENTS. — Black sheets and tin plates were down. Brass, copper, and lead were slightly firmer. Quicksilver, zinc, solder, and tin were slightly higher. Silver continued to decline.

FUEL AND LIGHTING.—Coal, coke, gas-oil, and coal oil were steady.

BUILDING MATERIALS.—Lumber was steady. Copper wire advanced slightly. Linseed oil and turpentine were lower.

HOUSE FURNISHINGS. — No changes were reported.

DRUGS AND CHEMICALS. — Alum and brimstone were slightly higher but bleaching powder, caustic soda, and soda ash were slightly lower.

MISCELLANEOUS.—In raw furs, muskrat skins, raccoon, and skunk were slightly higher. Malt declined from \$1.15 per bushel to \$1.10 at Toronto. Rubber was down to 21c. per pound.

PRICES IN THE UNITED KINGDOM AND IN OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movement of prices in other countries as compared with Canada.

The index numbers of retail prices which are listed are from official sources unless otherwise stated. The authorities for the wholesale price index numbers are named in all cases.

Canada

The wholesale index number of the Bank of Commerce for articles chiefly exported showed a fall in November of 6.01 points, or about 4 per cent, from the October level. This decline was chiefly due to the continued downward movement in the prices of wheat and other cereals. The index number for imports, however, showed a rise of about 1 per cent for the same period.

The Bank's December figure for prices of exports showed only a fractional decrease. The index number for prices of imports fell in December to about the same extent as it had risen in the previous month and stood at a figure very close to the October level. The combined number for exports and imports was 145.76 in the middle of December, as against 147.19 in November, average prices for the period 1909-1913 being taken as 100.

United Kingdom

WHOLESALE PRICES.

The Board of Trade index number of average prices for November (taking prices for 1913 as 100) was 176.4, as compared with 184.4 for October, a decline of 4.3 per cent. All groups were lower than in October except that comprising foods other than cereals, meat and fish. For industrial materials a fall of 5.0 per cent was shown, the iron and steel group being down by 6.6 per cent, and the cotton group by 11.5 per cent. The decline in cotton, however, followed an increase of 5.6 per cent which the October prices had shown over those for September. The figures for November showed all groups less than twice the pre-war level. The cotton group was nearest to this mark, showing an increase of 98.9 per cent on the average prices for 1913.

The *Economist* index number for the end of November showed a decline of about 2.8 per cent from the October level. Each of the five groups contributed to the downward movement, but the most pronounced decrease occurred in textiles. The rise in silk prices continued, but wool quotations, after their temporary advance in October, subsided to the figure in force at the end of September. Cotton prices also showed a decline. There were further cuts in

a. Average for year. b. Quarter beginning in specified month. c. 230 commodities, 1890-1909; 272, 1910-1914; 271, 1915-1921.
d. New index number for 1920 and 1921 is joined to old index number (38 commodities) and all converted to base 1913=100. (e) The com-
modities comprised in these two new index numbers are, in the one case articles chiefly exported, in the other case articles chiefly imported.

iron and steel prices. Coal prices were again a little lower.

The *Economist* number for the end of December showed a further decline of about 2.3 per cent from the November figure. While all groups again took part in the downward movement, the sharpest loss was in "other food products," which includes tea, sugar, etc., while the fall in cereals and meats was next in importance. A comparison of the number at the end of December with former levels shows a decline of nearly 48 per cent from the highest point at the end of March, 1920, a decline of over 26 per cent since December, 1920, and an increase of nearly 70 per cent as compared with July, 1914.

COST OF LIVING.

At the beginning of December, the official index number of retail prices of foods comprised in the food budget was about 95 per cent above the level of July, 1914. As compared with the previous month there was a decline of about 2½ per cent, mainly due to further reductions in the prices of meat, bread and flour, and from the highest point, at November 1, 1920, the decline was about 33 per cent.

The index number for all items of cost of living at December 1 was about 99 per cent above the level of July, 1914. This showed a decrease of nearly 2 per cent during the month of November, and of about 28 per cent from the highest point at November 1, 1920.

At the beginning of January the cost of the food budget showed a further decline, and stood at about 85 per cent above figure for July, 1914.

France

A comparison of the official index number of wholesale prices for the month of November with the average for 1913 shows an increase of about 234 per cent in the number representing prices of all commodities, and approximately the fol-

lowing increases for the various groups: animal foods, 242 per cent; vegetable foods, 206 per cent; sugar, coffee, cocoa, 224 per cent; minerals and metals, 177 per cent; textiles, 288 per cent; sundries, 262 per cent. The three food groups combined show an increase of about 226 per cent, and the three industrial groups about 241 per cent.

Germany

The index number of wholesale prices calculated by the *Frankfurter Zeitung* showed decreasing prices during the early part of 1921, the decline from January to June amounting to about 13.5 per cent, but with the rapidly falling value of the mark on the foreign exchanges, the number commenced to rise in the latter month, and from June to December advanced no less than 137 per cent.

The index number of wholesale prices issued by the Federal Statistical Office shows an even larger increase for a somewhat smaller period, the advance from the June average to November 15 being shown as almost 150 per cent. As an example of the change in prices of imported articles during one of the later months, the official publication *Wirtschaft und Statistik* reports that from the average for October to November 15, while the exchange value of the United States dollar rose 73.8 per cent, the price of lard advanced 73.3 per cent; pepper, 77.4 per cent; cocoa, 113.6 per cent; wool, 82.7 to 107.8 per cent; cotton, 62.8 per cent; raw jute, 52.9 per cent; aluminum, 82.8 per cent; refined nickel, 76.5 per cent. During the same period of approximately one month, articles largely of native produce advanced in somewhat lesser degree: the price of rye increased 47.7 per cent; wheat, 51.7 per cent; barley, 37.7 per cent; oats, 42.6 per cent; potatoes, 34.7 per cent; butter, 26.5 per cent. Various kinds of iron products increased in price between 35 and 40 per cent. The increase for the month in the general index number was 38.5 per cent.

During the period from June to October the official index number of retail food prices for the whole of Germany increased about 30 per cent. The increase in the cost of living including food, fuel and lighting and rent, is shown as only about 22 per cent for the same period, owing to the stabilizing influence of rent under restriction.

Poland

The index number of retail food prices at Warsaw for September, 1921, showed an increase to about 607 times the level of July, 1914. The number had more than doubled since the commencement of 1921. The increase from the pre-war level reflects the depreciation of the value of the Polish mark almost to the vanishing point.

South Africa

The *Quarterly Abstract of Union Statistics* for October, 1921, gives the general index number of wholesale prices for July as 1688, the average for 1910 being taken as 1000. The fall from the April figure was over 9 per cent leaving the July level of prices about 55 per cent above the average for 1914. Of the various groups comprised in the index number, that of jute, leather, hides and skins was nearest to the 1914 level, showing an increase of only 9 per cent. Meat was next with an increase of about 16 per cent; chemicals showed about 22 per cent increase; grains and meal about 27 per cent; dairy produce about 45 per cent. Fuel and light, building materials and metals underwent increases of about 81 per cent, 82 per cent and 88 per cent respectively from the 1914 level. The largest increases were in "soft goods" with about 164 per cent, and the miscellaneous group, in which the advance was about 168 per cent.

On the whole, for the period from 1914 to October, 1920, goods produced in South Africa showed an increase of only about 33 per cent, while imported goods advanced about 108 per cent in price.

United States

WHOLESALE PRICES.

The preliminary index number calculated by the Bureau of Labour Statistics of the United States, taking the average for 1913 as 100, was 149 for the month of November, 1921. This was a decline of one point or two-thirds of one per cent from the previous month, and of about 45 per cent from the highest point in May, 1920. The largest decreases during the month took place among farm products, particularly cotton, wheat, rye, cattle, hogs, sheep and poultry. Clothing and metals also were cheaper than in the month before. In the groups of fuel and building materials prices averaged higher than in October.

Gibson's average index number of food prices for December was 63.2, a rise of about 2 per cent from the previous month. The decline from the highest point reached in May, 1920, was about 59 per cent, and the figure for December, 1921, was only about 7 per cent above that for July, 1914.

The *Annalist* index number of food prices for December 17, was 164.246, an advance of over 2 per cent from the figure for November 12. The figures for the intermediate weeks showed a decline in the latter part of November followed by a rise in the first part of December. The number for December 17 was about 20 per cent below the level of December, 1920, about 49 per cent below the highest point in April, 1920, and about 16 per cent above the level of August 1, 1914.

Bradstreet's general index number for January 1, was \$11.3725, a gain of about $\frac{1}{2}$ per cent from that of December 1. This gain slightly more than offset the decline of November. The number at January 1 was about 10 per cent below that of January 1, 1921, 45.5 per cent below the highest point at February 1, 1920, and 30.5 per cent above the level of August 1, 1914.

Dun's general index number for January 1 was \$164.444, a very slight de-

crease from the December figure. The January number shows a decline of 17.2 per cent from January 1, 1920, a decline of 37.6 per cent from the high point of May 1, 1920, and an increase of 37.4 per cent as compared with July, 1914.

COST OF LIVING.

The index number of retail food prices for the United States, issued by the Bureau of Labour Statistics, showed a decline of one per cent from October 15 to November 15. Of the 43 articles of food comprised in this index, 29 decreased in price, the chief decrease being in pork chops, 11 per cent; potatoes, 9 per cent; oranges, 7 per cent; round steak, 6 per cent; flour, 6 per cent; sirloin steak, 5 per cent; ham, 5 per cent. Nine articles increased in price, the chief increases being in strictly fresh eggs, 18 per cent; onions, 15 per cent; storage eggs, 5 per cent; leg of lamb, 2 per cent.

At November 15, this index number was about 21 per cent below the level of November, 1920, about 31 per cent below the highest point in June and July, 1920, about 52 per cent above the aver-

age for 1913, and about 49 per cent above the figure for July, 1914.

The index number of cost of living in the United States, issued by the National Industrial Conference Board, stood at 163 for November, prices at the beginning of the war being taken as 100. The index numbers for the different groups, also expressed as percentages of prices at the beginning of the war, were as follows: Food, 152; Shelter, 169; Clothing, 161; Fuel and Light, 179; Sundries, 178.

Index numbers covering all items of cost of living in five cities for the month of December have been issued by the Bureau of Labour Statistics. The percentage decreases from last September are shown as follows: Chicago, 1.7; Detroit, 3.0; New York, .09; Philadelphia, 1.0; Washington, 1.9.

The cost of living index number for Massachusetts for the month of December was 159.6, the average for 1913 being taken as 100. The group index numbers which made up the December average were as follows: food, 139.4; clothing, 186.1; shelter, 161.0; fuel, etc., 180.5; sundries, 178.0.

RECENT LEGAL DECISIONS AFFECTING LABOUR

THE three legal decisions summarized below relate respectively to an application for an injunction to restrain a coal mining company from reducing wages, to a case of employer's liability in Saskatchewan, and to an action brought under the Fatal Accidents Act of Saskatchewan. On pages 59-70 in this issue are to be found three other important legal decisions which have recently been given. One of these relates to an injunc-

tion against picketing arising out of a strike of ladies' garment workers in Montreal, another relates to a judgment with regard to picketing delivered by the Supreme Court of the United States, and the third relates to the validity of an injunction against the United Mine Workers of America in the United States, and certain coal mine operators with reference to the "check-off" system and to activities of union officials in non-union districts.

Employers enjoined from reducing wages pending action of Conciliation Board, but injunction suspended on appeal

An agreement between District 26 of the United Mine Workers of America and the Dominion Coal Company, the Nova Scotia Steel and Coal Company and the Acadia Coal Company, members of the British Empire Steel Corporation, having expired on November 30, without the execution of a new agreement to take its place, the old agreement was extended for one month. In December, the companies announced their intention to put into effect a wage cut on January 1. The miners then applied for the appointment of a Board of Conciliation under the Industrial Disputes Investigation Act, and the application for a Board was granted. They also sought an injunction against the companies to restrain them from putting into effect the wage reductions, claiming that to do so before the Board had made a finding was a breach of the Industrial Disputes Investigation Act.

The decision of the Court was in part as follows: "The defendants are about to effect a reduction of the wages payable to their employees after an inadequate notice and without the sanction of a board of conciliation which Chapter 20 of the Acts of 1907 makes a condition precedent to the change coming into effect. I think the number of persons to be affected by the change has much to do with the propriety or otherwise of granting the remedy. I am told that there

may be thousands. It seems to me more convenient that the defendants should be required to stay their hand until the matter has been dealt with by a board of conciliation, than that a change should be made of which it is possible that such board might not approve. The provisions of the statute of 1907 seem so clear and to prohibit the changes on such distinct terms that I think it both just and convenient that the injunction should be issued. It has not been made clear to me that the right to the injunction has been established as respects the companies other than the Dominion Coal Company, but I assume the intention to reduce the wage is common to them all." The request for an injunction was therefore granted.

The employers appealed against the injunction, and on January 10 it was suspended by the Nova Scotia Court of Appeals on the ground that as the coal companies and miners had agreed that the old agreement should expire on December 31, 1921, and as no new agreement had been made, there were no existing rates of wages after the end of the year about which there could be a dispute, as none had been fixed.

(Nova Scotia — *United Mine Workers of America, District 26 vs. Dominion Coal Company, et al.*)

Employer liable for accident due to negligence of man working under injured employee

After a locomotive which had been in a railway shop where its boiler was cleaned out had been made ready to take out a train and had a pressure of steam of about 150 pounds, it was noticed that a plug in the cab was leaking. The locomotive foreman asked a foreman boilermaker under him to examine the engine with him. When the two men applied a wrench to the leaking plug, it blew out and the locomotive foreman was killed and the other man

severely injured by the escaping steam. The injured boilermaker brought an action for damages against the company on the grounds: (1) that the defendant's servants failed to screw the plug properly into its socket; (2) that a defective plug was provided that would not properly screw into its socket. No evidence was submitted to show that the plug was defective, but the plaintiff's evidence was that the plug must have been put in cross-threaded

after the boiler had been cleaned, as otherwise the accident would not have occurred. The man who inserted the plug was in the plaintiff's department, working under him. The company claimed that it could not be guilty of negligence as against the plaintiff as there was no breach of duty so far as the plaintiff was concerned. Its claim was based on the fact that the negligence was in the department of the plaintiff and it was the plaintiff's duty to see that the men in his department did their work properly.

The case came before a jury in the Court of King's Bench of Saskatchewan. The jury found that the defendant company had been negligent in putting in plugs cross-threaded or im-

proper and that the plaintiff had not been guilty of contributory negligence and had not voluntarily accepted the risk attendant on the removal of the plug. The defendant company then moved for judgment notwithstanding the jury's findings. The Court held that the company could not escape liability for the negligence of the workman who caused the accident as this would put the plaintiff in the position of taking a risk of the negligence of all the men under him. It was a question for the jury as to whether there was negligence on the part of the plaintiff and their finding must prevail.

The plaintiff was therefore given judgment for \$15,529.80 and costs.

(Saskatchewan — *Marshall vs. Grand Trunk Pacific Railway Company.*)

New trial ordered when jury's finding is ambiguous

A second legal action arose out of the accident due to the boiler explosion described above. The widow of the locomotive foreman who was killed by this explosion brought an action against the company as administratrix of her husband's estate, under the Fatal Accidents Act. The case was heard before a jury in the Court of King's Bench of Saskatchewan. The jury found in answer to questions that the death of the victim was caused by the negligence of the defendant company which negligence consisted in "Having an improperly placed or defective plug in arch tube of boiler", and that the victim was not guilty of any contributory negligence, and did not voluntarily accept the risk attendant

on moving the plug with a wrench. Damages were assessed by the jury in favour of the widow and two children.

In the opinion of the Court the jury left the question in doubt and ambiguity since if the jury based their findings on a defective plug, there was no evidence whatever of that and the defendant company would be entitled to have such a verdict set aside, but if the negligence consisted in the plug being placed improperly or cross-threaded, the plaintiff would then be entitled to judgment. The Court therefore declared that there should be a new trial.

THE LABOUR GAZETTE

Prepared and edited in the Department of Labour, Ottawa

MINISTER—THE HONOURABLE JAMES MURDOCK.

DEPUTY MINISTER—F. A. ACLAND.

Volume 22

FEBRUARY, 1922

Number 2

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

The month in brief

In addition to the regular monthly and quarterly articles respecting employment, prices, industrial disputes, strikes, wage agreements, etc., this issue of the LABOUR GAZETTE contains many articles of special industrial interest. Mention might be made of a summary of the labour legislation enacted or amended by the Dominion and Provincial parliaments during the year 1921; also of two important judgments delivered in Nova Scotia courts arising out of an application for an injunction to restrain certain coal companies from reducing wages pending action of a conciliation board. This issue also contains the text of a Dominion Order-in-Council respecting unemployment relief.

At the beginning of January the percentage of unemployment reported by trade unions stood at 15.1 as compared with percentages of 11.1 at the beginning of December, and with 13.1 at the beginning of January, 1921. Considerable short time continued to be indicated by the unions making returns. According to reports received from some 5,800 firms, there was considerable fluctuation in the volume of employment afforded, but on the whole the movement was decidedly unfavourable. There continued to be a great deal

less activity than was reported by the firms making returns for January of last year.

The average cost of the weekly family budget of 29 staple foods in some 60 cities was \$11.03 for January as compared with \$11.00 for December; \$14.48 for January, 1921; \$15.30 for January, 1920; and \$7.73 for January, 1914. Including the cost of fuel and rent with that of food the figures averaged \$21.52 for January; \$21.49 for December; \$25.30 for January, 1921; \$24.15 for January, 1920; and \$14.49 for January, 1914. In wholesale prices the index number fell back from the slight rise noted in December, standing at 227.7 for January as compared with 230.7 for December and 227.3 for November; 281.3 for January, 1921; 336.4 for January, 1920; and 136.5 for January, 1914.

The time loss due to industrial disputes during January was greater than during either December or January, 1921. There were in existence during the month 23 strikes, involving about 3,357 workpeople with a time loss of about 76,070 working days. Six of the strikes commenced during January. Two of the strikes commencing in January were later reported terminated, leaving 21 strikes involving about 3,199 workpeople on record at the end of the month.

**Proceedings
under the
Industrial
Disputes
Investigation
Act**

During the month of January the Department received reports from two Boards of Conciliation and Investigation established to deal with disputes between (1) the Hull Electric Company and certain of its employees, being members of Division No. 591, Amalgamated Association of Street and Electric Railway Employees of America, and (2) the Dominion Coal Company, Nova Scotia Steel and Coal Company, and Acadia Coal Company, the leading coal mining companies of Nova Scotia, and certain of their employees respectively, being members of District No. 26, United Mine Workers of America.

One application was received for the establishment of a Board. There was also received a copy of the agreement reached as a result of renewed negotiations between the various railways, members of the Railway Association of Canada, and certain of their employees, pursuant to the recommendations of the interim report rendered in October last by the Board established to deal with this dispute.

Jottings

Announcements have been made of forthcoming conventions of the following International Unions: The Order of Sleeping Car Conductors will meet at Chicago, Ill., on March 13 to 18. The Railway Employees' Department of the American Federation of Labour will meet at Chicago on April 10.

It is understood that an inter-provincial conference may be held shortly to discuss plans for the better co-ordination of the work of the minimum wage boards that have been established in various provinces of the Dominion.

At the opening of the first session of the fifth Legislature of Alberta, on February 2, it was announced that legislation would be introduced to create a Bureau of Labour, in order that problems concerning wage-earners through-

out the Province might receive proper consideration.

The administration of the Alberta Government Employment Bureau Act of 1919, is by an order contained in the *Alberta Gazette*, January 31, 1922, transferred from the Department of the Provincial Treasurer to the Department of Public Works.

The premier of Alberta, in reply to a protest by the Calgary Trades and Labour Council in January against the employment by a Mackenzie River firm of Chinese workers to clean their fish, states that he has ascertained that the company cannot get white men to do this work. He suggests that the Trades and Labour Council ascertain what wages would be paid to white workers, if these were available.

In view of the fact that Labour is represented on the Ontario Workmen's Compensation Board, in the person of the vice-president, Mr. J. H. Halford, the Canadian Manufacturers' Association have requested Premier Drury to appoint to the Board a representative of the Association.

At the request of the Provincial Association of Retail Merchants of Alberta, the Minister of Public Works of that province recently drafted a model "early-closing" by-law which it was suggested might be adopted by Edmonton, Calgary, Lethbridge and Medicine Hat, in order to secure uniformity of practice in these four chief cities of the province. The suggested by-laws would close all shops at 1 p.m. on Wednesdays, and at 6 p.m. on all other week days.

An Association of Builders' Exchanges was recently formed for the Province of Quebec, the local associations at Montreal, Quebec and Sherbrooke having associated together in order to extend their organization over the Province. The new association is making representations to the Provincial Government on the disability now carried

by builders in the Province of Quebec in being held liable for a period of 20 years for the safety of buildings constructed by them; also on the subject of workmen's compensation and the necessity for calling for tenders for provincial work.

According to reports received by the Ontario Department of Mines there occurred during 1921 at all the mines, metallurgical works, quarries, clay pits, and sand and gravel pits, 1,286 accidents, of which 24 were fatal. Four fatal accidents at the quarries were due to the carelessness or ignorance in the handling of explosives. Of three fatal accidents at the gravel pits, two were due to undermining and the third to material falling from a face which was 16 feet in height. It is suggested that these accidents would have been prevented by a knowledge of explosives and a strict observance of the Mining Amendment Act.

The Employers' Association of Manitoba has recently requested Premier Norris to advance legislation which would require that before strikes or lock-outs are called industrial disputes shall be compulsorily referred to the Manitoba Joint Council of Industry; also that labour unions be held responsible for the illegal actions of their individual members.

The Legislative Assembly of Manitoba on January 19 appointed a committee of the Legislature to devise means for the relief of existing distress due to unemployment, and to consider the cause of this distress and make recommendations for the prevention of its recurrence. The committee has already made practical suggestions for the relief of the unemployed in Winnipeg.

Acting under the instructions of the convention held in Winnipeg in August, 1921, the executive council of the Trades and Labour Congress of Canada has commenced the publication of a

monthly periodical entitled "Canadian Congress Journal." In the official announcement it is stated that this magazine is "to provide a medium of publicity whereby the official declaration of the Congress, the legislative desires of its membership and general news of trades union and social development throughout the world might be transmitted regularly to its membership and the public."

According to information supplied by the Saskatchewan government "agricultural inspection trains" operated over a large area of the province during the year 1921. The attendance at the agricultural instruction cars was 16,592; at the "Interprovincial weed train," 4,851; and the "Better Farming train," 32,774. The expenses paid by the province amounted to \$18,134.

The executive of District 26, United Mine Workers of America, have been requested by the miners of Glace Bay, N.S., to hold a local referendum "for the purpose of choosing two miners to sit on the board of directors of the Dominion Coal Company, in order that labour may share in the control of the coal industry of this sub-district, and that when these two representatives are duly chosen by the miners the Dominion Coal Company be requested to make a place for them upon the board of directors." Copies of this resolution were ordered to be sent to the Premiers of Canada and Nova Scotia and to the president of the British Empire Steel Corporation.

The legislative committee of the Winnipeg Trades and Labour Council and the Manitoba Executive of the Trades and Labour Congress are urging certain amendments to the Manitoba Workmen's Compensation Act, Mothers' Allowances Act, and Distress Act.

A Canadian Association of Child Protection Officers was organized last October in Winnipeg, at a conference of

officials of the various provincial governments who are responsible in their provinces for the enforcement of laws relating to children. The conference was held under the chairmanship of Dr. Helen McMurchy, chief of the Child Welfare Bureau which is attached to the Dominion Department of Health. There were present at the conference judges of juvenile courts, school attendance officers, superintendents of dependent and neglected children, etc. Any person engaged in the administration and enforcement of laws relating to the protection and care of children is eligible for membership in this new association, the fee being placed at \$2. The policy of the association will be to work in close co-operation with the Canadian National Council of Child Welfare, which means that as close association as possible will be maintained between professional and voluntary workers.

The Dominion Department of Health, Ottawa, has published a series of 14 "Little Blue Books" (Home Series) in French and English, dealing with matters relating to the home. The titles of the booklets are as follows: "Good Wishes for You from Canada," "How to Build the Canadian House," "How to Make our Canadian Home," "How to Make Outpost Homes in Canada," "Canadians Need Milk," "How we Cook in Canada," "How to Take Care of Mother," "How to Take Care of the Family," "How to Take Care of the Baby," "How to Manage Housework in Canada," "How to Take Care of the Children," "Household Cost Accounting in Canada," "How to Take Care of Household Waste," "How to Avoid Accidents and Give First Aid." Any of these booklets may be obtained on application to the Division of Child Welfare, Department of Health, Ottawa.

The number of persons insured under the British Unemployment Insurance Acts of 1920 and 1921 is estimated at about 11,900,000. Of these 1,865,332,

or 15.7 per cent, were totally unemployed on December 9, and 273,796, or 2.3 per cent, were working systematic short time in such a manner as to entitle claimants to benefit.

The Federation of Building Workers, Italy, has established an organization known as the Italian Federation of Co-operative Building Societies, for the purpose of eliminating the middleman in production. It is stated that this organization is modelled after similar organizations in England and Germany. The organization will include all producers' co-operative societies in the building industry.

By a law passed in Greece in August, 1921, provision is made for the setting up of an employment exchange department to find work for all kinds of workers in times of peace, and in times of war to find employment for the families of men under arms. The department will consist of an information office and an office for the distribution of work. A board of management composed of seven titular members of both sexes will direct the work of the office, with power to appoint, if necessary, voluntary workers as assistants.

Agenda International Labour Conference

The agenda for the Fourth International Labour Conference of the League of Nations, which is to meet in October next, was drawn up by Governing Body at a meeting in Geneva on January 18. It was decided that the agenda should comprise what was termed "official" and "unofficial" subjects, the former being proposals which would call ultimately for acceptance or otherwise by the member states and the latter being matters for determination by the Conference itself.

The "official" items of the agenda will be as follows:

1. Amendments to the treaty regarding the forms of constituting the Governing Body.

2. The periodicity of the Conference once a year, or less frequently.

3. The question of emigration statistics relating to co-ordination and communication to the International Labour Office.

The "unofficial" subjects will include suggested changes in the standing orders of the Conference. This last mentioned subject will first be examined by the Standing Orders Committee of the Governing Body in order that definite proposals may be laid before the 1922 conference.

At a previous meeting of the Governing Body, held at Geneva on November 18, it was decided to accept an invitation of the Italian Government to hold the April session of the Governing Body at Rome.

Labour Legislation proposals for Ontario

A suggested programme of labour legislation for the forthcoming session of the Ontario legislature was submitted to the Honourable E. C. Drury, premier of the province, on January 27, by the Ontario Executive of the Trades and Labour Congress of Canada. These proposals were in line with resolutions passed at the Congress convention at Winnipeg in August. (See LABOUR GAZETTE, September 22, p. 1126). They include measures providing for a general working day of eight hours and a weekly rest day; proportional representation; light beer and wine licenses; old age pensions; regulation of employment of women before and after child-birth, and generally of the working hours of women and children; an industrial rehabilitation system under the Workmen's Compensation Board; more careful supervision and restriction of provincial immigration activities, as affecting employment; the payment of fair wages and the observance of established hours; and a public holiday on election days.

On the eight-hour day proposal the Premier pointed out the difficulty of en-

acting such a measure in a single province. As to proportional representation he indicated that a bill would likely be introduced giving effect to the recommendations contained in the report of the special committee on Proportional Representation which was appointed by the Ontario Government in 1920. On the proposal for beer and wine licenses Premier Drury pointed out that the question must be decided by the people themselves, who had only recently expressed their wishes through a referendum. The Premier, however, expressed sympathy with the other measures proposed by the delegation.

The Toronto Building Trades Council, supported by representatives of other labour organizations, has requested the provincial government to bring in legislation which would increase the rate of compensation paid to injured workmen under the Workmen's Compensation Act from 66⅔ to 100 per cent; also to protect workmen against the risk of occupational diseases, especially painters and decorators; to revise the pension list so as to bring pensions previously awarded under the act up to a level corresponding to the increased cost of living; and to bring the provincial government employees under the act.

A deputation representing the Retail Merchants Association of Ontario waited on members of the Ontario Government during January to oppose any legislation providing for an 8-hour day, or inclusion of retailers under the Workmen's Compensation Act.

Labour delegation to Quebec Government

A programme of labour legislation on the lines of the resolutions passed by the Trades and Labour Congress of Canada at its convention held at Winnipeg last August, was submitted by the Quebec Provincial Executive of the Congress on January 27, to the Premier and Executive Council of the Province of Quebec, with the request that measures

in accordance with these resolutions be passed at the present session of the Legislature. The reforms suggested were as follows: (a) A compulsory state system of workmen's compensation for industrial accidents. Considering the great importance of this subject the delegation asked for a special conference at which representatives of the railway brotherhoods would also be present. The Premier agreed to make arrangements for a conference as proposed. (b) Legislation in conformity with the recommendations of the First International Labour Conference (League of Nations), at Washington, in 1919, including a legal 8-hour day; regulating the employment of women in industry before and after child-birth; prevention of night employment of women, and of children under 16 years. (c) An inter-provincial conference to take action in accordance with the recommendations of the Royal Commission on Uniformity of Labour Laws in regard to workmen's compensation, minimum wages, factory inspection, mining, etc. (d) Provision for industrial rehabilitation, similar to the provision made for returned soldiers by the Dominion Government. It was pointed out that such legislation would fall within the sphere of the Provincial authorities, and that if a sufficient number of provinces took action, it might be possible to continue the existing schools under the supervision of the Dominion Government. (e) Mothers' Pensions. The delegation asked that Quebec fall in line with the majority of Canadian Provinces and American States which had already adopted this method of enabling widows or abandoned mothers to bring up their own families. (f) Minimum wages for women. The delegation complained that the act passed in 1919, authorizing the Lieutenant Governor to appoint a minimum wage commission of three members had so far remained a dead letter, and expressed the hope that a commission would shortly be named. Amendments to the act were suggested making compulsory the no-

mination of the commission; increasing the number of commissioners from three to five, of whom one should be a woman; and making allowance to cover the necessary expenses of the members in attending the meeting of the commission. (g) Double-platoon system for fire-fighters. In support of this proposal the delegation pointed out that in many municipalities the firemen are on duty continuously throughout the year. (h) Health laws. The following health regulations were suggested: requiring that old wallpaper be removed before new paper is laid on; denaturizing wood alcohol before it is used for paint and varnish; prohibition of paint sprinklers; the examination of barbers and inspection of barber shops. (i) Education. The delegation asked for a law making school attendance free and compulsory for children up to 16 years of age; and requiring all persons under 21, who work in an industry, store, etc., and who cannot read or write, to attend evening classes. It was also suggested that in Montreal the four Catholic district school boards be abolished and their powers transferred to a Central Catholic School Board, whose members would be elected by the Catholic rate-payers. (j) Election laws. Under this head the delegation proposed that election day should be a public holiday so as to enable every elector to do his duty as a citizen; and that the system of proportional representation, by means of the single transferable vote, be adopted in future Provincial elections.

Another delegation of international trade unionists, headed by Mr. Tom Moore, president of the Trades and Labour Congress of Canada, and officials of the Brotherhood of Railway Trainmen, waited on Premier Taschereau on February 9, to submit plans for a new Workmen's Compensation Act to be administered by a Board as in Ontario. The Premier promised to give serious attention to the proposals, but intimated that no legislation on the lines suggested would be introduced during the present session.

Mothers' pensions law sought for Quebec

Further action in the direction of mothers' pensions in the province of Quebec was reported in January, when a deputation of prominent Montreal citizens waited on Premier Taschereau to request that an appropriation of \$300,000 a year for a period of five years be made for this purpose by the Legislature at its present session. It was suggested that the money appropriated should be administered by a commission composed of both men and women, with sub-committees in touch with the widows and children who would benefit. The Premier promised to give serious consideration to the proposal.

Proposed national research institute

The Honorary Advisory Council for Scientific and Industrial Research has issued a pamphlet entitled "Research, and the Problems of Unemployment, Business Depression and National Finance in Canada" advocating the erection and equipment by the government of a building at Ottawa to be known as "The National Research Institute" and to be supported by an annual grant. It is declared that such an institute is needed to prevent the annual loss of scientific experts trained in Canadian universities, to help Canadian industries to compete successfully with other countries by helping them to solve their industrial problems, to provide a centre of information and thus prevent overlapping and reduplication of research work, and to provide means for solving scientific problems directly affecting industries, which if solved would add enormously to the national wealth. Among these problems are mentioned the extermination of wheat rust, the utilization of waste products such as the helium in the natural gas, sawmill waste, straw, etc., the development of the supplies of lignite, peat and low-grade iron ore, and the making of artificial fertilizers by the use of water power.

Salaries of school teachers in Saskatchewan

The average salaries paid to teachers in Saskatchewan holding First, Second and Third class certificates respectively in rural, village and town schools during 1917, 1919 and 1920, were officially stated in the Provincial Legislative Assembly on January 12, as follows:—

	1917		1919		1920	
	Rural schools	Village and town schools	Rural schools	Village and town schools	Rural schools	Village and town schools
	\$	\$	\$	\$	\$	\$
First class—						
Males.....	950	1,353	1,185	1,634	1,387	1,881
Females.....	871	930	1,125	1,132	1,279	1,352
Second class—						
Males.....	894	1,100	1,152	1,352	1,323	1,677
Females.....	849	844	1,074	1,020	1,223	1,217
Third class—						
Males.....	864	887	1,120	1,205	1,273	1,354
Females.....	818	784	1,027	962	1,171	1,123

Legislation to control rents

Legislation to control rents was sought by the executive committee of the Alberta Federation of Labour at a conference with the Premier of Alberta held prior to the opening of the present session of the Legislature. The delegation stated that a Nova Scotia act afforded a precedent for such legislation, and the Premier undertook to examine the provisions of this act. The act referred to, entitled "An Act to Provide for Fair Rents for Dwelling Houses and to Restrict the Eviction of Tenants," (Nova Scotia Statutes, 1919, Chapter 2; amended 1920, Chapter 73; and 1921, Chapter 64), was passed by the Nova Scotia Legislature in 1919, to remain in force for one year, but the period of its operation

was extended at each of the two succeeding sessions for the same term. Its main provisions are as follows: where the rent of a dwelling house exceeds a "fair and reasonable" amount, the excess shall be irrecoverable by the landlord, notwithstanding any agreement to the contrary, this provision however not applying to rent which accrued before the act came into force; premiums paid to landlords in addition to rent shall be recoverable by the tenants; no tenant shall be evicted so long as he continues to pay reasonable rent and performs the other conditions of tenancy, except for other fair cause; no liability shall be involved through any breach of agreement in regard to the conveyance or leasing of a house or dwelling house, where such a breach is occasioned by an order of a Court. Unless renewed at the present session for a fourth annual period the Fair Rent Act will cease to be in effect on April 30 of the present year.

**Employees'
Benevolent
Society of
Trail, B.C.**

The employees of the Consolidated Mining and Smelting Company of Canada, Limited (Smelting department)

at Trail, B.C., recently formed a benevolent society, under a charter granted by the Provincial Government, which will pay its members sickness, accident and other benefits, in circumstances which would not entitle them to any benefits under the Provincial Workmen's Compensation Act. About 1,000 workers are employed at Trail and about 90 per cent of these, it is stated, are already enrolled as members. Although membership in the society is not compulsory, any employee of three months' standing is eligible. The entrance fee is one dollar and the monthly rate of subscription fifty cents, but the officers of the society are authorized to increase the monthly dues or make a levy upon the members sufficient to insure the continued payment of benefits, an average monthly balance of at least \$500 being

estimated as necessary for this purpose. If a member ceases to be employed at the Trail works temporarily, he may continue in good standing by paying part of his monthly dues for three months in advance. The officers of the society, consisting of a president, vice-president, secretary-treasurer and four directors, are elected annually by vote of the members at a meeting especially called for the purpose. The by-laws provide that "the benefits of the Society shall be paid to members who are obliged to leave their work and so lose their wages for that time in consequence of accident, sickness or illness from a cause which would not entitle the member to receive compensation from the Workmen's Compensation Board for the time so lost." Accident or sickness due to the use of intoxicating drinks is not considered. The benefits provided are as follows: a member losing time from his work for seven days or more, owing to one of the causes covered by the scheme, receives \$10 per week for the first thirteen weeks and \$5 for the second thirteen weeks, but no member may receive benefits for more than 26 weeks in the year. Payments are made semi-weekly. The amount of sick benefits payable to the members may, when the funds of the society so warrant, be increased on a motion passed at the annual or at a special meeting. (In the LABOUR GAZETTE for June, 1920, page 630, and August, 1920, page 940, some account was given of action taken by the employing company for the provision of additional medical care for the smeltermen at Trail.)

**Calgary civic
employees
undertake
staff reforms**

Approval was given by the mayor and commissioners of Calgary, Alberta, to proposals laid before them in January by a delegation representing the local union of municipal employees in the direction of a more efficient and permanent organization of the staff and its work. The union proposed to

formulate a scheme, and as this would involve research lasting for several months the sanction of the civic authorities was sought before it was undertaken. A permanent form will be sought for the classification of employees and the fixing of maximum and minimum wages for each class, and a new method devised for determining the fitness of applicants for work. The prevailing practice of promotion by seniority should be changed, the delegates thought, by further provision for the advancement of the more efficient individual workers. The City Commissioners promised to assist in the carrying out of such a plan considering that it would promote good feeling between the city and its employees, and increase efficiency in all departments.

Reduction in agricultural wages in the United States

An investigation recently carried out by the United States Department of Agriculture shows that in

the United States farm wages, with board, averaged \$29.48 per month in 1921, or 37 per cent below the average (\$46.89) for the previous year. The 1920 figure was the highest ever recorded in the country. In 1916, the year before the United States entered the war, the rate was \$23.25. Monthly wages without board declined from \$64.95, the highest point, to \$42.65 in 1921, or by 34 per cent. The average for 1916 was \$32.83. Harvest wages by the day, states the report, declined nearly as much between 1920 and 1921, viz., from \$3.60 to \$2.12, as they gained in the four years 1916 to 1920 (\$1.69 to \$3.60). Harvest wages, exclusive of board, shared in the general marked up-

ward movement, and rose from \$2.07 in 1916 to \$4.36 in 1920, followed by a decline to \$2.80 in 1921.

Export credits and unemployment in Belgium

With respect to the guarantee by the Belgian government of 250,000,000 francs for export credits as a means for diminishing unemployment (see LABOUR GAZETTE, January, 1922, p. 9), a Royal Decree of October 18 provides that this guarantee will apply to all transactions involving the sale of goods manufactured wholly or partially in Belgium to countries with depreciated exchanges. It will take the form of a surety, given by the government on bills drawn on foreign importers in exchange for deliveries made to them, to cover 55 per cent of the credit, the exporter and his discount bank being responsible for 25 per cent and 20 per cent respectively of the risk. The importer will be required to pay down 10 per cent of the invoiced sum and to provide securities for the 90 per cent for which he obtains credit. Government action must be decided by royal decree issued on the advice of a committee, which will take into account the solvency of the buyer and the guarantee he offers, as well as the benefit which the community may derive from the transaction, both as regards the unloading of the market and the reduction of unemployment. The application for government intervention must be accompanied by the following documents: the bill accepted by the buyer; documents proving the Belgian origin of the goods and their real value; attested papers proving the genuineness of the transaction; a certificate of the approved bank which has accepted the

security provided by the buyer; information as to unemployment and conditions of labour in the applicant's works; an undertaking by the applicant to increase his output in proportion to the sums thus put at his disposal or to replenish his stock; an undertaking by the discount bank to take a share of the risks, and an undertaking by the purchaser to pay down 10 per cent of the invoice. To facilitate matters, the government may give its guarantee in advance. It has the right to all payments made by the foreign importer up to the amount guaranteed.

New Arbitration Courts for Australia

At a recent conference of premiers of the Australian states it was agreed, in order to prevent overlapping of jurisdiction, to amend the present arbitration system by establishing a Court comprising federal and state judges to determine the basic wage and standard hours in any or all industries. The conference also agreed to the establishment of an Appeal Court to determine appeals from the awards of federal or state industrial tribunals. All state undertakings are to be exempted from the jurisdiction of the Federal Arbitration Court. The Federal Arbitration Court will continue to exist but will only deal with industries declared to be federal by the new Court. It is not expected that the proposed reforms will be carried through immediately and considerable opposition is expected from the trade unions, who are said to consider that the new scheme will involve the destruction of the federated unions.

Compulsory instruction of apprentices in Italy

The Ministry of Industry, Italy, has introduced a bill to make vocational instruction compulsory during apprenticeship. The bill, which has the approval of the Superior Council for Industrial Education, contains the following clause: "In places in which ap-

prenticeship schools exist, young workers who do not already possess a diploma certifying that they have attended courses at these schools, shall be obliged to attend classes for two hours a day. Employers shall be bound, on penalty of a fine not exceeding 1,000 lire, to pay their apprentices for the two hours devoted to work in the school workshops at the same rate as they are paid for the regular work executed in the workshop."

Domestic training for unemployed women workers

In Great Britain, the Central Committee of Women's Training and Employment, which, in January, 1920, was granted £500,000 by the National Relief Fund to enable it to carry out special schemes of work and training for unemployed women whose earning capacity and opportunities were injuriously affected as a result of war conditions, has developed the original scheme in two distinct directions: (1) Homecraft (vocational) courses for the training of unskilled and unemployed women between the ages of 16 and 35 who verbally undertake to enter resident domestic service at the end of the course. The Ministry of Labour is contributing to the cost of these courses. (2) General instruction in domestic economy for the assistance and instruction of women workers between the ages of 18 and 40 who are suffering from hardship through prolonged unemployment. These courses have been instituted in districts where there are large numbers of skilled women workers unemployed, waiting for trade to revive. The committee also gives grants toward outfits for women and girls entering resident domestic service who can show that without assistance toward an outfit they are unable to obtain employment. After a probationary period of three months the outfit becomes the property of the recipient. Some 1,500 women have received grants in this connection. Of the applicants who have completed

the probationary period of three months, 80 per cent are in resident domestic service, and of this number approximately 85 per cent are in private service.

**Bill affecting
British farm
workers**

A bill has been introduced in the British House of Commons at the instance of the National Union of Agricultural Workers which proposes to fix for a term of at least three years a statutory minimum wage of 50s. per week for all adult able-bodied male agricultural workers. There is nothing in the bill, however, which will prevent conciliation committees agreeing upon higher rates. Working hours are not to exceed 48 in the week or 8½ on any day, and there is to be one weekday half-holiday each week. Reservations are made with respect to hours of work at harvest time and in cases of emergency. Weekday overtime is to be paid for at the rate of time and a third, and there are special Sunday minimum rates. An annual holiday of one week is to be allowed without loss of wages. The bill proposes to abolish the tied cottage system.

**New Danish
law affecting
agricultural
workers**

A new law, dated May 6, 1921, to come into force six months after promulgation, supersedes all previous legislation dealing with relations between farmers and their workers in Denmark. This law relates chiefly to permanent workers under 18 years of age at time of beginning service. The term of contract must not exceed one year. Where board is provided, food must be of good quality, and sufficient, and each worker is to have a place at table. Bed-rooms must be light and airy, 16 cubic metres of air space being prescribed for one person and 25 for two. Wages are to be paid at specified intervals varying according to the length of the engagement. In case of the worker's sickness, the farmer is to provide proper nursing in his home, or, if advisable, the patient

may be removed to a hospital. In general, however, the employer is made responsible should such removal prejudice the recovery of the worker. Where the sickness is not due to any fault of the worker, the employer must pay wages and provide board and lodging while the patient remains in his house. After a month's sickness the contract of service may be terminated by either party. Minors under 16 must not be worked beyond their strength or for longer than normal working hours; attendance at school, evening classes, or technical institutes may be allowed, and the amount of holiday leave is also prescribed. Contracts with workers over 18 years of age must include the provisions as to healthy sleeping quarters and those relating to the removal of a sick worker to the hospital; if such contracts do not contain divergent clauses, the other provisions laid down for minors are to apply. A conciliation committee (on which women may serve) is to be elected by the parish council in each rural commune. It is to comprise four members, including the chairman, and both farmers and workers are to be represented upon it. All disputes of a legal nature between farmers and their workers must be referred first to this committee. If agreement is not reached the matter may be carried to a court of law. Penalties are prescribed for breaches of the law.

**New Danish
law on employ-
ment exchanges
and unemploy-
ment insur-
ance**

In December, 1921, an act was passed in Denmark which provides for the co-ordination of Unemployment Societies, Employment Exchanges and Emergency Works under a single official, to be termed the Director of Labour. The new law includes a clause from the act of 1920 to the effect that unemployed pay is not to be granted to workers who refuse on inadequate grounds to undertake work offered to them. A new provision states that it shall not be re-

garded as adequate grounds for refusing work that the wages for such work are lower than those which the worker in question has hitherto received, provided that the wages are not less than those usually paid in the industry and district for similar work. The new act provides for the formation of an emergency fund for dealing with relief work during exceptional unemployment, this fund to be subscribed to by the State and employers. Further, the Unemployment Societies are to pay into the fund at the end of each quarter 5 per cent of the amount of subscriptions received from their members. When the total of the emergency fund amounts to more than fifty million kroner the contributions of the employers and workpeople are to be reduced. A Committee of the Rigsdag is to decide when a state of extraordinary unemployment exists. The emergency fund is to be managed by a Works Board of the Ministry of the Interior, which is also to prepare plans for public works to be undertaken as emergency works. When the latter have been commenced, payment of unemployment benefit is to be made conditional on the production of evidence that the person in question has not been able to obtain employment on such work. The conditions of labour on emergency works are to be determined in such a manner that the greatest possible number of unemployed can thereby find employment, and that on the one hand it will be more advantageous to obtain work on emergency works than to secure unemployment pay, while on the other hand it will still remain of interest for the unemployed person to obtain other employment. The new act came into operation on January 1, 1922.

New apprenticeship law in Denmark

A new apprenticeship law recently enacted in Denmark provides among other things that it shall be compulsory in all cases to draw up an agreement in writing for workers under 18 engaged in

industry, handicraft, commerce (including the co-operative movement), restaurant work, and in other trades, if the workers in question have not already completed their apprenticeship or are engaged only as messengers, odd men, or the like. The Minister of the Interior will decide any questions which may arise as to whether an occupation for which apprentices' agreements have hitherto not been provided shall come under the Act. Apprentices' agreements entered into should be submitted to the police authorities concerned for endorsement to the effect that they are drawn up in legal form, unless the Minister of Labour should transfer this task to the municipal labour exchanges of the district concerned. No person can legally be engaged as an apprentice before he has finished his schooling and has reached the age of 14, and apprenticeship cannot be continued longer than five years. Working hours may not (with few exceptions) be longer than those of ordinary workers. The Minister of the Interior, in agreement with the Minister of Commerce and the employers' and workers' organizations in the trade concerned, may decide that a test shall be passed in certain trades before the expiry of the apprenticeship. Where no such tests are given, the master will issue a certificate. All apprentices shall be members of a health insurance society at the expense of the master. Disputes between masters and apprentices shall be settled by arbitration if the parties cannot agree to any other method. The Act also contains regulations respecting the discontinuance of agreements, persons who may not engage apprentices, and special regulations concerning working hours.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

I.—The Labour Market, Strikes, Prices

The Labour Market

EMPLOYMENT as reported by employers remained on a low level during January, although considerable recovery from the Christmas and New Year holiday losses was recorded early in the month. There were, however, numerous shutdowns for inventory and other purposes which caused employment to fluctuate considerably during the month. The situation continued to compare very unfavourably with that indicated during the same month in 1921. Unemployment as registered by trade unions showed an increase at the beginning of January, which was comparable with that reported at the corresponding period of last year. There was a further large contraction in the business transacted by the offices of the Employment Service during December, the number of applicants registering, placements made and vacancies notified all showing decided declines.

Fortnightly reports from employers to the Dominion Headquarters of the Employment Service of

EMPLOYERS' Canada for the period
REPORTS. December 18 to Jan-

uary 15 showed a net decline in the volume of employment; the pronounced increases made during the second fortnight of the period were not sufficient to counterbalance the very extensive contractions recorded at the end of December. These losses in many cases represented temporary cessation of operations over Christmas and New Year's day for holiday and inventory purposes. All provinces shared in the downward movement, but the shrinkage in employment in Ontario and Quebec was particularly noteworthy. The iron

and steel industry registered the most pronounced fluctuations, the temporary closing down of railway car and other shops throwing large numbers of men out of work. By far the greater part of these workers, however, were re-employed at the beginning of January. Railway construction, sawmills, coal mining, retail trade, railway transportation and tobacco factories showed very large losses in employment, while in no group was there any expansion worthy of note. In the leather, edible plant, rubber, textile, street railway and cartage, and shipping and stevedoring groups the volume of employment recorded during the period under review exceeded that indicated by the firms making returns for the corresponding period of last year. In all other groups, however, the situation continued to compare very unfavourably with last winter. A review of employment conditions for the period October 9, 1921, to January 15, 1922, together with a chart showing the curve of employment from January, 1920, to the middle of January, 1922, appears elsewhere in this issue of the LABOUR GAZETTE.

The percentage of unemployment reported by trade unions at the beginning

TRADE
UNION
REPORTS

of January was slightly larger than that recorded at the beginning of December, 15.1 per cent of the membership covered by the returns being out of work in the former period as compared with 11.1 at the beginning of the previous month and 13.1 at the beginning of January, 1921. (Unemployment as used here has reference to involuntary idleness due to economic

causes; persons occupied in work other than their own trades, or who are idle because of sickness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to those unions reporting.) Increases in unemployment occurred in every province except Nova Scotia, where conditions showed some improvement. Unions in Quebec, with almost 27 per cent of idleness, reported the most unfavourable situation.

Statements for the beginning of January were tabulated from 1,520 labour organizations representing 161,085 members, of whom 24,311 were unemployed, a percentage of 15.1. The temporary closing of factories over Christmas and New Year's day affected employment in the manufacturing group to a marked degree, particularly in the metal industries. In addition, workers in the food, tobacco, printing and publishing group were not as fully employed. On the other hand, leather and glass workers were somewhat busier. Garment makers reported practically the same percentage of unemployment as during the preceding month. Less activity was reported by the workers in the transportation industries, especially by steam railway employees. Railway carmen in this group were affected very noticeably by the temporary shutdowns in railway car shops. Maintenance of way men also were considerably slacker, partly on account of seasonal dullness. Tradesmen in the building and construction group reported approximately 8 per cent more unemployment, also partly due to the usual winter quietness in this industry. In this group the percentage of idleness was slightly exceeded by that registered during the corresponding period in the previous year. Fishermen, lumber workers and loggers were not so fully employed as at the beginning of December, 1921.

A review in some detail, with tabular statements, of the unemployment situation during the quarter ending December 31, as indicated by trade unions, is printed elsewhere in this issue.

Reports from the offices of the Employment Service of Canada indicate

EMPLOYMENT	that there was a further decline in the volume of business trans-
OFFICE	acted during the four-
REPORTS	week period November

21--December 17, 1921, and during the two weeks ended December 31, 1921. Considerable reduction is shown in the volume of employment offered during the four-week period ended December 17, 1921, vacancies registering a decrease of approximately 20 per cent from the number reported during the previous period, and 19 per cent from the report of the corresponding period of 1920. Marked contractions were reported in placements, there being 16 per cent fewer placements made in regular employment during the four weeks under review than during the preceding period, and approximately 36 per cent less than during the same period of last year. There was a substantial increase in the number of applicants registered for employment.

During the four-week period the offices reported that they had made 18,287 referrals of persons to employers and 11,550 placements in regular employment. Placements reported during the preceding four-week period numbered 13,767, while during the corresponding period of 1920 they totalled 17,958. In addition 5,330 placements were made in casual employment (one week or less) as compared with 6,043 during the preceding period and 4,087 during the period ended December 18, 1920. Of the placements in regular employment during the period under review 9,235 were of men and 2,315 of women. Employers notified the Service of 18,807 vacancies of which 12,760 were for men and 6,047 for women, as compared with

23,485 during the previous period, and 23,248 during the same period of 1920. Applications for employment during the period under review totalled 38,707 (31,777 of men and 6,930 of women), as compared with 34,149 applications during the preceding period and 36,040 during the period ended December 18, 1920.

During the last two weeks of 1921 further decreases were noted in placements and applications, while vacancies showed an increase of about 21 per cent from the number reported during the corresponding fortnight of 1920. The marked decline as compared with the preceding fortnight may be attributed to some extent to the falling off in business incident to the holiday and stock-taking season. The offices reported that they had referred 8,082 persons to regular employment and that 4,224 placements were effected. This represents a decrease of about 27 per cent when compared with the preceding fortnight and of about 30 per cent when compared with the corresponding period of 1920. In addition 3,186 casual placements were made during the period, as compared with 2,651 during the preceding fortnight, and 2,329 during the same period of 1920. Of the placements in regular employment 3,578 were of men and 846 of women. Applications for employment during the two weeks numbered 13,890, of which 11,378 were of men and 2,512 of women. A decrease of about 30 per cent is shown when comparison is made with the preceding period but only a slight reduction from the same period of 1920, when 14,003 applications were made. Vacancies reported during the period numbered 8,927 (of which 6,049 were for men and 2,078 for women) indicating a slight contraction from the preceding period but a considerable increase over the same fortnight of 1920.

The quarterly report of the work of the offices may be found elsewhere in this issue.

Employment in the building trades as indicated by the value of the building permits issued during December registered a decline as compared with the preceding month. The total value of the permits issued in 56 cities was \$5,072,117 as compared with \$10,958,066 in November, and with \$4,666,537 in December, 1920. All provinces with the exception of Alberta reported reductions as compared with the previous month. In comparison with December, 1920, Quebec and Ontario were the only provinces to record increases. Of the larger cities, Montreal and Vancouver reported reduced activity both as compared with the preceding month and with the corresponding month in 1920. Toronto, on the other hand, recorded gains in both comparisons. At Winnipeg the value of permits issued was less than that registered in the preceding month, but it was greater than that recorded in the corresponding month of last year. Sherbrooke, Three Rivers, Brantford, Kingston, St. Catharines, Lethbridge and New Westminster, reported gains in both comparisons. A statement showing in some detail the value of building permits issued by the 56 largest cities during the quarter ended December 31, 1921, is given elsewhere in this issue.

According to the Canadian Building Review issued by MacLean's Building Reports, Limited, the value of contracts awarded during December totalled \$19,118,500 as compared with \$8,746,500 in December, 1920. Of the former amount, \$1,346,100 was awarded in the Maritime provinces; \$11,955,800 in Quebec and Ontario and \$5,816,600 in the Western provinces. Of this total \$4,486,000 was to be expended on residences; \$4,416,000 in business buildings, \$474,100 on industrial establishments and \$9,742,400 in engineering contracts.

Strikes

The loss of time due to industrial disputes during January was greater than during either December or January, 1921. There were in existence at some time or other during the month 23 strikes, involving about 3,357 workpeople with a time loss of about 76,070 working days, as compared with 17 strikes, 2,883 workpeople and 64,733 working days in December, 1921; and 21 strikes, 1,736 workpeople and 30,065 working days in January, 1921. On January 1, there were on record 17 strikes affecting 2,364 workpeople. Six strikes were reported as having commenced during January, compared with one during December, 1921. Two of the strikes commencing during January were reported terminated, leaving 21 strikes, involving 3,199 workpeople on record at the end of the month.

Prices

The movement in prices showed little change, the index number of wholesale prices falling back from the slight rise

noted in December, standing at 227.7 for January as compared with 230.7 for December and 227.3 for November; 281.3 for January, 1921; 336.4 for January, 1920; 286.5 for January, 1919; 258.7 for January, 1918; and 136.5 for January, 1914. The chief changes for the month were increases in the animals and meats group, with decreases in the dairy group, in fruits and vegetables, in miscellaneous foods, in miscellaneous building materials and in house furnishings.

In retail prices the average cost of a family budget of 29 staple foods in some 60 cities was practically unchanged at \$11.03 for January as compared with \$11.00 for December; \$14.48 for January, 1921; \$15.30 for January, 1920; \$13.78 for January, 1919; \$12.42 for January, 1918; and \$7.73 for January, 1914. Including the cost of fuel and rent with that of food, the figures averaged \$21.52 for January, 1922; \$21.49 for December, 1921; \$25.30 for January, 1921; \$24.15 for January, 1920; \$21.73 for January, 1919; \$19.80 for January, 1918; \$14.49 for January, 1914.

II.—Industries and Trades during January, 1922

Logging

VERY little change on the whole was reported in the volume of employment afforded in logging camps during January. While there were fairly large gains made early in the month they were due entirely to the resumption of operations interrupted by the Christmas and New Year's holidays. Ontario firms registered most of the recovery, but employment in Quebec also showed slight improvement. In Quebec practically no change in the situation was indicated by logging concerns in Hull, Louiseville, River Desert and La Tuque, but there was slightly increased activity at St. Jovite Station and Three Rivers. In Ontario more employment was afforded in logging camps at Blind River,

Braeside and Nesterville, but firms at Pembroke and other Upper Ottawa points showed some curtailment in operations. In British Columbia employment in the woods continued to be at a low level in spite of a large increase in staff at Alert Bay. At Headquarters there was less activity. Information respecting the month of December which was not available for insertion in the January issue of the LABOUR GAZETTE, shows that timber of all species scaled in British Columbia in that month totalled 139,257,977 feet as compared with 143,714,315 feet in November. The quantity of Douglas Fir scaled during December exceeded that of any other species and with Red Cedar formed approximately 70 per cent of the total.

Mining

Continued contraction was reported in the volume of employment afforded in the mining industries during January, particularly in the coal fields of British Columbia. In Nova Scotia also there was less activity in coal mining, reductions in staff being reported at Inverness, Joggins Mines, Springhill and Stellarton. The situation at Sydney Mines and Westville showed no change, while the mines at Little Bras D'Or and Glace Bay indicated slight gains in employment. At Minto, N.B., some curtailment of operations was reported. Employment in the coal mines in Alberta on the whole was quiet. Slight decreases in payroll occurred at Coleman, Edmonton, Nordegg and Canmore. At Drumheller, Hillcrest and Brule Mines, on the other hand, rather more activity was indicated. In British Columbia, employment was in lesser volume in the coal mines at Cumberland, Fernie, Middlesboro and several other centres, but at Nanaimo more coal miners were employed than during the preceding month. Metal mining on the whole was somewhat more active, although varying conditions were reported in different districts. Practically no change in the situation occurred in the nickel mines at Nickelton, Copper Cliff and Coniston in Ontario. The number of workers employed in the gold mines at Timmins also declined to some extent, but at South Porcupine and Schumacher there were minor increases in employment. The Cobalt mines reported practically the same staffs as in the preceding month. In British Columbia the mining of metallic ores also afforded more employment, especially at Surf Inlet, Anyox and Britannia Beach. Gold mining at Stewart employed fewer miners and there was less activity in the gold, silver and copper mines at Trail and Rossland. No change in the situation was indicated at Kimberley. The mining of non-metallic minerals eased off to some extent during January. Stone quarrying

at St. John, N.B., was considerably more active than during the preceding month. There was a slight falling off in employment in the salt mines at Amherstburg, Ont. Asbestos and chrome mining in the province of Quebec was on a lower level than during December, largely on account of the closing of one mine at Black Lake for repairs. Slight improvement was indicated, however, at Coleraine and Thetford Mines, while at Asbestos staffs remained stationary.

Manufacturing Industries

Employment in the food group, as in many other manufacturing industries, showed considerable fluctuation in January on account of partial or complete recovery from the Christmas and New Year holidays, which, however, was partly offset by numerous shut-downs for inventory-taking and repairs during the month. Employment in chocolate and confectionery manufacturing at Halifax remained practically on the same level as in December. At Dartmouth, N. S., there was a slight increase in employees in the sugar refineries. The same was true also of sugar refineries at St. John, N.B., which employed larger staffs than for several months. Confectionery production at St. Stephen in the same province showed some recovery from shut-downs at the end of December. Food production in the province of Quebec was at a considerably lower level than in December. Biscuit manufacturing in Montreal and Joliette employed fewer people than in the preceding month, but in most cases staffs were larger than in January of last year. Bakeries in the former centre retained almost the same staffs as in December. There was also no change in the employment afforded in flour mills in Montreal. Varying conditions were reported by different sugar refineries in that city; decreases in staff in some establishments were not sufficient to counterbalance increases in

others. Chocolate and confectionery manufacturing in Montreal also declined. The situation in Ontario during January was somewhat more favourable than in Quebec, as, in the former province, there was more recovery from the decided losses noted at the end of December than in the latter. Sugar production at Chatham and Wallaceburg was at a very low level, there being shutdowns in both centres for repairs or inventory. Chocolate and confectionery manufacturing at Brantford and London afforded more employment than at the end of December, partly on account of the re-opening of factories following the Christmas holidays. At Toronto, however, confectionery plants were not so busy. The production of starch at Fort William was very much curtailed, the factories operating at only about 10 per cent of their capacity. Employment in flour mills at Keewatin and Port Colborne remained on the same level as in December. Food and vegetable canning at Leamington absorbed a slightly larger number of workers. The cereal mills at Peterborough reported a considerably reduced staff. Chocolate and confectionery factories in Toronto, on the whole, were busy, although in some cases less activity than in December was reported. The situation in the food group in the Prairie provinces was on the whole less favourable. Biscuit and bakery factories in Winnipeg reported some curtailment in production, and flour and cereal mills in the same centre employed smaller staffs than in December. At Moose Jaw, Sask., on the other hand, slightly increased activity was indicated. Sugar refining in Vancouver, B.C., employed the same number of persons as for the last few months. Employment in meat and fish products showed a considerable falling off during January, a continuation of the downward movement that this group has taken for several months. There was a minor increase in activity in meat packing plants at Hull, P.Q. At

Montreal, however, such establishments employed smaller staffs than during both November and December. In Ontario, dairying at Ottawa and Toronto absorbed rather more workers than in the previous month. At Peterborough and Toronto there was a considerable falling off in employment in meat packing plants and abattoirs. In Manitoba also this industry afforded less employment, especially at Winnipeg. In Calgary, Alta., there were further declines in activity in meat product houses and abattoirs. Tobacco manufacturing in Quebec on the whole was quiet; there were increases in staff in some factories, but others reported shutdowns during the month. At Montreal, the situation on the whole was rather more favourable than at the end of December. Tobacco product plants in Quebec city employed slightly more people than in the preceding month. In Ontario also there was considerable improvement in the situation, especially at Toronto and Hamilton. Practically the same volume of employment as in December was reported in malt and distilled liquor manufacturing in Montreal and also at Walkerville, Ont.

Only partial recovery from the very numerous and extensive shutdowns recorded at the end of December occurred in this group in the early part of January and at the end of the month there were further shutdowns in railway car and other shops which affected large numbers of workers. Employment in the iron and steel industry therefore was at a low level during the whole month. The rolling mills at New Glasgow, N.S., reported the same number of employees as at the end of December. At Sydney considerable contraction was reported in the crude, rolled and forged division. Further curtailment was registered in operations in the Halifax shipyards, which were working at less than 10 per cent of their capacity. The

IRON AND STEEL PRODUCTS.

car shops at New Glasgow, however, re-opened after a lengthy shutdown although they did not yet employ anything like their full staff. Boiler and engine manufacturing at Montmagny, P.Q., was slightly more active than in December. The steel foundries at Longue Pointe re-opened in the early part of January although they were not working to capacity. Fire arm and ammunition manufacturing at Brownsburg and Quebec city showed a minor falling off in employment. Steel ship building and repairing at Montreal was considerably more active than in December and also than in November, although it was very much below normal. At Sorel and Three Rivers this industry was hardly as busy as in December: Some of the largest railway car and locomotive shops in Montreal, which re-opened early in January after the holidays were again closed at the end of the month. Employment in other car shops in the same city was in lesser volume than in the preceding month. Foundries and machine shops at Montreal showed a nominal decline in payroll, but rolling mills in the same centre showed an insignificant increase. The forging shops in Montreal on the whole were busier, although several plants employed smaller staffs than in December. Trade machinery manufacturing showed no change in employment. The production of stamped and enamel ware in Montreal showed an increase, but small hardware factories in the same city were less busy. Agricultural implement manufacturing at Terrebonne remained on the same low level as during December. There was a minor increase in activity in hand tool factories at Rock Island. Iron and steel fabrication at Lachine showed a considerable falling off. No change in the situation was indicated by general plant machinery factories at Sherbrooke. In Ontario the changes in employment in the iron and steel industry during January were not so pronounced, although the situation was not as favourable as in the preceding

month. Employment in general plant machinery factories at Galt and Hamilton showed practically no change when compared with the returns for December. At Toronto, however, this industry was rather less active. Iron and steel fabrication at Hamilton and Walkerville afforded less employment than during the preceding month. The production of wire and its products in the former centre also declined, while railroad equipment manufacturing at Hamilton showed some contraction. Steel furnaces in the same city on the whole were slightly more active although in some cases reductions in employment were reported. The railway car shops at London employed a considerably larger working force than during December. At Ottawa and Hamilton there were gains in staff in car factories. On the other hand, at Fort William this industry employed fewer people. Steel ship building at Kingston showed an increase in activity although its staff was not up to normal. At Midland also improvement was noted in this group, but at Port Arthur there was a decided falling off in employment in the ship yards. Locomotive manufacturing at Kingston remained at a low level. Improvement was reported, however, in the locomotive shops at North Bay, and at Stratford they re-opened early in January after the holidays. In Ottawa and Toronto practically no change in the situation occurred. The production of agricultural implements at Brantford and Smith's Falls employed slightly larger working forces, and at Hamilton one factory which had been closed over the holidays re-opened with part of its staff. There were also increases in employment in other implement concerns in the same centre. At Orillia and Toronto, however, the agricultural implement industry showed contraction, particularly in the latter city. Stationary and steam engine manufacturing at Brantford and Toronto declined, but at Galt no change in employment occurred. Foundries and

machine shops at Brantford were not quite as busy as in December; some expansion in employment, however, was reported at Oshawa and Toronto. The production of small hardware at Brockville was in slightly greater volume than in the preceding month; on the other hand, at Hamilton and Ingersoll there was a falling off in activity. Automobile factories at Chatham, Ford, Oshawa, St. Catharines, Walkerville and Windsor afforded considerably more employment than for several months, although in most cases their payrolls were below normal. The manufacture of heating appliances at Guelph and London employed much smaller staffs than in the preceding month, partly on account of temporary shutdowns in January for stock-taking purposes. At Toronto employment in this industry remained practically the same as in December. The production of hand tools at Dundas was considerably lower than in the preceding month and there was slightly less activity at St. Catharines in tool factories. Cast iron pipe plants at Guelph were considerably busier. Wrought iron pipe factories at Welland were working at less than half their capacity. Forging mills at Oshawa reported small increases in staffs, but, on the other hand, at Swansea some curtailment in employment occurred. At Peterboro practically no change was reported by special trade machinery plants. Sheet metal works at Oshawa were a good deal busier, but there was a minor drop in production in the stamped and enamel division of the sheet metal industry at Toronto. The rolling mills at Sault Ste. Marie reported a very much smaller staff than during December, while at Toronto there was a substantial increase in personnel in rolling mills. Safe and vault plants in Toronto afforded slightly more employment. Considerable recovery from holiday losses was recorded early in January by firms in the iron and steel industries in the prairie provinces. At Winnipeg, however, structural iron and steel fabrication was considerably less

busy than in December and the rolling mills at Selkirk were practically closed down. In British Columbia employment in the group also showed decided improvement, which indicated to some extent the re-opening of railway car and other shops after the holidays. The shipyards at Victoria and Vancouver employed larger staffs than during December, though employment in shipbuilding in the province continued on a very low level.

Employment in the non-ferrous metal products group was in lesser volume than during December.

NON-FERROUS METAL PRODUCTS.	Brass, bronze and copper factories in Montreal on the whole, reported much smaller staffs than
-----------------------------	--

in the preceding month. Copper wire production in the same city also eased off to some extent. Jewellery manufacturing at Montreal and Sherbrooke was at a lower level than during December. Aluminum factories at Shawinigan Falls employed slightly larger staffs than in December, although they were not nearly as busy as in January of last year. Can manufacturing at Maisonneuve showed a slight falling-off and at Deschenes there was a reduction in payroll in nickel smelting and refining. The production of brass and nickel goods at Hamilton, Ont., was slightly increased during January, but at Toronto it declined. Brass, bronze and copper factories at Sarnia reported approximately the same volume of employment. Nickel refining at Port Colborne was considerably less active and at Copper Cliff there was a minor drop in employment in nickel works. Silver and plated ware manufacturers in Toronto employed fewer people than in December and there was also a reduction in staffs in lead, tin, zinc and copper factories. Aluminum manufacturing in the same centre was slightly brisker. In British Columbia there was a minor gain in employment in copper smelting and refining at Anyox.

Employment in the leather industries was in slightly lesser volume than in December, largely on account of shutdowns for inventories and repairs which lasted for varying periods within the month. Boot and shoe manufacturers in Montreal reported no change in the situation, on the whole. In Quebec city employment generally was on a lower level in leather footwear factories. Further increases in activity occurred in boot and shoe establishments in St. Hyacinthe. Harness and saddlery works in Montreal showed slight curtailment in staff. In Ontario the situation generally showed improvement. Tanneries at Toronto and Kitchener were somewhat busier, but at London such factories indicated a minor decline in activity. Boot and shoe factories at London and Galt, on the whole, reported smaller staffs, while at Perth and Toronto increased employment was indicated. Firms producing rubber goods registered considerable curtailment, especially in the province of Quebec, where several factories were temporarily shut down for holiday purposes. Rubber footwear production at Granby and Montreal was at a considerably lower level, but at St. Jerome there was more activity than during November and December. Tire manufacturing at Montreal showed a slight gain. On the other hand, fountain pen factories in the same city were not quite as busy as in the preceding month. Rubber footwear plants at Guelph and Merritton, Ont., reported rather more employment, but at Kitchener this industry showed slight depression. Tire manufacturing at Guelph and Toronto employed more workers than in December, but at Kitchener the tire works were partially closed. Rubber and elastic goods plants at Toronto on the whole were busier, while at Bowmanville such factories employed smaller staffs.

During January there was some recovery from the pronounced losses in employment recorded during December by firms manufacturing lumber products, although the revival was very far from complete. At Plaster Rock, N.B., sawmills indicated a minor drop in production. In the province of Quebec there was also less activity in lumber mills, especially in Sayabec, Breakeyville, Montreal, Port Etchemin and Quebec. On the other hand, at St. Pacôme there was a slight gain in production in sawmills. Furniture manufacturing at Beauharnois, Coaticook and Cowanville declined to some extent. The wooden shipyards at Sorel were closed down. At Hull, considerable curtailment of operations was reported by match factories. In Ontario centres, as a whole, employment in the lumber group registered some improvement. The sawmills at Fort Frances, Rockland and Keewatin recorded smaller staffs, but at Arnprior and Pembroke increased activity was reported. Box and shoo manufacturing in the latter centre was in greater volume than during December, while at Toronto no change was indicated in the situation as reported by container factories. The production of office, church and school furniture at Newmarket absorbed a larger staff than for several months. Household furniture manufacturing at Stratford remained quiet. There was a falling off in employment in refrigerator factories in Brantford. Practically no change in payrolls was reported by manufacturers of billiard tables and materials at Toronto. Carriage factories at Chatham and Orillia maintained the December level of employment. Washing machine production at London employed the same working force as in the preceding month. Improvement in the situation was recorded on the whole by sawmills in British Columbia, the plants at Golden, New Westminster, Vancouver and Wardner being considerably busier. At Fraser Mills, on the other hand, less activity

was indicated. The production of musical instruments generally afforded more employment than in December. Manufacturers of voice reproducing machines at Montreal were busier than in November and December, and at Toronto, piano, organ and talking machine factories employed larger working forces than in the preceding month, mainly on account of the resumption of activity after the holidays.

In this group considerable revival in trade was indicated during January, especially in Ontario.

PULP AND	Pulp and paper factor-
PAPER	ies at Liverpool, N. S.,
PRODUCTS.	reported larger staffs
	than during November

and December. There was an insignificant increase in employment as compared with December at Murray in the same province, although the working force at that centre continued to be considerably curtailed. Practically no change in the situation was indicated in the paper mills in New Brunswick; at Chatham, St. John and Bathurst almost the same staffs were employed as during December. In the Province of Quebec conditions were slightly less favourable. Large declines in employment were recorded in the paper mills at Chicoutimi and smaller contractions occurred in Hull, Shawinigan Falls, Windsor Mills and La Tuque. Staffs at Donnacona, Chandler and Bagotville remained practically stationary. On the other hand, substantial improvement was reported at Three Rivers and there was a small gain in employment at East Angus. In Ontario the paper mills at Ottawa, Espanola, Thorold, Hawkesbury and Sturgeon Falls employed much larger staffs than in December. At Sault Ste. Marie and Smooth Rock Falls, on the other hand, contractions were reported; in the latter centre, the losses in employment were largely due to temporary shutdowns. Paper goods manufacturing at Toronto employed more workers than during December. Printing and publishing establishments in Winnipeg, Man., on the

whole, were somewhat busier than in the preceding month. A slightly downward tendency was reported in the employment afforded in newspaper offices at Regina and Saskatoon, Sask., and also in Edmonton and Calgary, Alta. In British Columbia the pulp and paper mills at Ocean Falls recorded a minor decline in employment, while staffs at Powell River and Port Alice remained stationary. Printing and publishing shops in Vancouver and Victoria were rather less busy than in December.

In spite of considerable recovery reported by manufacturers of textile pro-

	ducts during January,
TEXTILE	employment in this
PRODUCTS.	group was at a much

lower level than in the preceding month, especially in Quebec. In New Brunswick the cotton mills at Marysville and St. John continued to register increased activity, but in Milltown smaller staffs were reported. Slight increases in production occurred in the cotton mills at Yarmouth, N. S., and also in hosiery and knit goods factories at Truro. In Montreal, cotton mills were not as busy on the whole, but at Sherbrooke, Magog, Montmorency Falls and Valleyfield they employed larger working forces than during December, while at Three Rivers practically no change in the situation was indicated. Men's clothing factories at Montreal were busier, but manufacturers of women's garments reported considerable curtailment in staff. Increases in employment occurred in some thread manufacturing plants in Montreal, but losses in employment in other factories counterbalanced this expansion. At St. Johns, reductions in payroll were indicated by thread manufacturers. The production of men's furnishings at Montreal eased off to some extent, while at St. Johns there was a slight gain in activity. The employment afforded in oiled and waterproof clothing factories in Montreal showed a slight downward tendency. Corset manufacturing in Quebec city

engaged a considerably larger working force than in December. Woollen and silk production at Sherbrooke was on a higher level. Manufacturers of hosiery and knit goods at St. Hyacinthe showed a nominal gain in employment. A slight increase in activity was indicated in felt factories at Lachute Mills. In Ontario considerable increases in employment were indicated by textile manufacturers. Hosiery and knitting mills at Brantford, Galt, Paris and Dunnville employed larger staffs than during the preceding month; at Toronto and Hamilton, however, less employment was indicated on the whole, although many factories reported larger working forces than in December. The woollen mills at Preston re-opened with practically their normal payrolls, but there were minor declines in employment at Almonte, Toronto, and Peterboro, while at Hespeler there was a considerable contraction. Owing to the resumption of operations in a large cotton mill in Hamilton there was an increase in employment in the trade on the whole in that city, although several factories reported reductions in staffs. At Welland and Cornwall cotton mills were hardly as busy. Carpet production at Guelph and Toronto was quiet. Factories making men's clothing in Toronto employed a slightly smaller working force than in December. At Hamilton, however, considerably more activity was indicated, although the plants were not working to full capacity. At London employment in men's wear factories remained on the December level. Women's garment makers in Toronto were very much busier. The production of men's furnishings at Toronto and Walkerville afforded less employment than during the preceding month, but at Kitchener there was a slight increase in staff. Bedding factories in Toronto employed a much larger working force than in December. Practically no change was indicated in the volume of employment afforded in cordage mills at Brantford and Welland.

Oil refineries in Montreal employed their usual staffs. At Sarnia, Ont., there was a gain in production in oil refining. The MISCELLANEOUS PRODUCTS. The same is true also for Dartmouth, N.S., but at Ioco, B.C., employment declined very slightly. Carbide manufacturing at Shawinigan Falls, P.Q., eased off to some extent. The production of oxygen and acetylene gases at Welland remained on the same level as during December. Cynamid factories at Niagara Falls employed fewer persons than during the preceding month. Baker powder factories in Toronto were busier. Employment in explosive plants at Montreal continued to decline. Paint works on the other hand, maintained the same payrolls as in December. Soap manufacturers in Toronto were considerably more active, partly indicating the resumption of work after holiday shutdowns. Electrical appliance factories in Montreal reported smaller working forces than in December. At Hamilton, Stratford and Toronto, Ont., there was also less activity in electrical apparatus manufacturing, but at St. Catharines rather more employment was registered. Reductions in staff continued to be indicated in light, heat and power plants at Montreal and there was also a minor decline at Quebec. In Ontario employment in electric current works showed a slight improvement, especially at Hamilton and Toronto. In Winnipeg, Man., on the other hand, further contractions in employment were reported, but at Vancouver, B.C., slightly larger staffs were employed in electric current establishments. Glass factories at Montreal maintained substantially the same working forces as in December. The closing of a large cement plant for repairs in the same city affected employment for cement workers materially. In Ontario there was very little change in the volume of employment afforded in glass factories. At Hamilton, rather more activity was indicated, but at Wallaceburg there was a minor decline

in the production of glass articles. At Toronto the staffs reported were practically the same as during December. Cement manufacturers at Port Colborne employed larger working forces than in the preceding month, although the staffs were not yet normal. At Belleville, on the other hand, further contraction in employment occurred.

Construction

The Canadian Pacific, Grand Trunk and Canadian National Railways continued to report curtailment in the volume of employment afforded on railway construction, including maintenance of way. At the end of January they employed approximately 2,200 fewer construction workers than in December. These declines were fairly evenly spread over the month. the Canadian Pacific Railway released over 300 workers; the Canadian National Railways reported contractions affecting almost 1,600 employees and the Grand Trunk Railway released approximately 300 men. Ontario and the Prairie provinces continued to report very pronounced contractions although losses were recorded in greater or lesser degree in all provinces except British Columbia.

The value of building permits issued in 56 cities showed a contraction during December as compared with November, the value declining from \$10,958,066 in the latter month to \$5,072,117 for the month under review, a reduction of almost 54 per cent (a statement showing in some detail the value of building permits in 56 cities during October, November and December, 1921, is given elsewhere in this issue). During January there was a reduction in employment in the building and construction group, contractors in almost every part of the country having reported seasonal slackness. At Halifax, increases in employment made by one firm slightly exceeded reductions recorded by others. In New Brunswick the tendency was decidedly downward, especially at St.

John. Firms in the province of Quebec, on the whole, registered reduced activity, although some contractors at Montreal and Sherbrooke were busier. Practically without exception, contractors in Ontario cities reported declines in employment, especially at Toronto, Hamilton, Windsor, London, Kingston and Kitchener. At Winnipeg, Man., further decreases in staff were recorded by firms in the building and construction group, and in British Columbia there continued to be reductions in employment, particularly at Penticton and Vancouver. Highway construction in Ontario and other provinces released from employment large numbers of men.

Transportation

The gross earnings on the Canadian National Railways during January amounted to \$6,695,480 as compared with \$8,475,328 in the preceding month. Information respecting the month of December, which was not available for insertion in the January issue of the LABOUR GAZETTE, shows that the gross earnings of the Canadian Pacific Railway during December were \$15,756,924 as compared with \$18,787,679 in November and with \$20,604,168 in December, 1920. Continued contraction was registered in the volume of employment afforded by the Canadian Pacific, Grand Trunk and Canadian National Railways in operation, including general offices, trainmen, engine crews, station employees, sleeping, parlour and dining car employees, these systems having released approximately 2,000 workers from their working forces. The Canadian Pacific Railway let out over 900 of these men, the Grand Trunk employed about 400 fewer persons, while the Canadian National showed losses affecting approximately 700 workers. All provinces except the Maritimes shared in these losses, but those recorded in the Prairie provinces and Ontario continued to exceed the decreases indicated else-

where. Electric railways on the whole were slightly busier, although reductions in staff occurred in Montreal and Quebec in the Province of Quebec, at Winnipeg, Man., and Calgary, Alta. In Ontario, however, increased activity was reported at Hamilton, Toronto and Ottawa, and the electric railway companies at Vancouver and Victoria, B.C., were also busier. Longshore and stevedoring work in Quebec, Ontario and British Columbia remained very quiet, but employment in the Maritime parts was in greater volume than during December.

Trade

Decided contractions in employment were reported in retail trade in January, indicating reaction from Christmas activity. The reductions in staff were especially large in stores in Moncton, Montreal, Toronto and Regina. The downward trend noted in employment in wholesale trade for the last few months continued in January. Toronto wholesalers were much less busy and there were small declines in staff at Montreal, Hamilton, Winnipeg, Calgary and Regina.

INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907

Proceedings for the Month of January, with texts of Boards' Reports, etc.

DURING the month of January the Department received reports from two Boards of Conciliation and Investigation established to deal with disputes between (1) the Hull Electric Company and certain of its employees, being members of Division No. 591, Amalgamated Association of Street and Electric Railway Employees of America, and (2) the Dominion Coal Company, Nova Scotia Steel and Coal Company, and Acadia Coal Company, the leading coal mining companies of Nova Scotia, and certain of their employees respectively, being members of District No. 26, United Mine Workers of America.

One application was received for the establishment of a Board. There was also received a copy of the agreement reached as a result of renewed negotiations between the various railways, members of the Railway Association of

Canada, and certain of their employees, pursuant to the recommendations of the interim report rendered in October last by the Board established to deal with this dispute.

Application received

During the month of January an application was received for the establishment of a Board of Conciliation and Investigation from the employees of the Metropolitan, Mimico and Scarborough Divisions of the Toronto and York Radial Company, being linemen, wiremen, train despatchers, operators, helpers, etc. In view of certain negotiations concerning changes of ownership of the railway in question the matter of Board establishment was left in abeyance. An officer of the Department in the locality reported a temporary adjustment in the meantime.

Report of Board in dispute between the Hull Electric Company and certain of its employees

A REPORT was received from the Board established to deal with the dispute between the Hull Electric Company and certain of its employees, being members of Division No. 591, Amalgamated Association of Street and Electric Railway Employees of America. The Board was composed as follows: Mr. W. F. O'Connor, K. C., chairman, and Messrs. G. D. Kelley and Fred Bancroft. The report was signed by the chairman and Mr. Bancroft and recommended that the wages of the employees remain in accordance with the findings rendered by the Board established to deal with a similar dispute in August, 1920. Mr. Kelley did not concur in these findings and presented a minority report. The award was accepted by the employees but the company's attitude was, at the close of the month, the subject of correspondence with the Department.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Hull Electric Company (Employer), and certain of its employees being members of Division 591, Amalgamated Association of Street and Electric Railway Employees of America (Employees).

To the Honourable
The Minister of Labour,
Ottawa.

Sir:—

The Board of Conciliation appointed to investigate the above mentioned dispute and consisting of George D. Kelley, of Ottawa, recommended for appointment by the Hull Electric Company, Fred Bancroft, of Oakville, recommended for appointment by the em-

ployees of the company, and W. F. O'Connor, K.C., of Ottawa, as Chairman, was organized and sworn on the 30th day of December, 1921, met in the Court House at Ottawa on the fourth day of January, 1922, and continued in session there until all relevant evidence had been received and arguments concluded. It reconvened subsequently to conclude its business and for that purpose held two sessions.

The following parties appeared before the Board: for the Company, Mr. Gordon Gale (Vice-President and General Manager), and for the employees Messrs. Joseph A. Noel, John J. Gibeault and William Sutherland.

The demand of the company was for a ten per cent reduction in the wage scale and a reduction of the rates for overtime fixed (as to such scale and rates) under an award of a Board of Conciliation made at Ottawa on August 26th, 1920, and subsequently accepted by the company and its employees. The demand of the employees was for an increase of seven cents per hour above the scale mentioned, and for two changes in conditions, both relating to clothing.

Before receiving any evidence the Board dealt with a contention of the employees that the company had violated section 57 of the Industrial Disputes Investigation Act by putting into effect the reduction of ten per cent above mentioned, after a dispute had arisen and before a pronouncement thereon by this Board; that is to say, that the company having given notice on November 1st of the reduction to take effect on December 1st, and the employees having on November 25th successfully applied for a Board, the company in violation of the statute, had on December 23rd underpaid the employees upon the ten per cent reduced

basis. The Board found that the complaint as raised being one of a violation of the statute was not included within the reference to the Board and that any recourse of the employees based upon a breach or non-observance of the statute must be to some other authority or tribunal.

Several times throughout the enquiry, the Board urged the parties to confer with a view to settlement, and the parties, who evidenced always the utmost friendliness, did so confer with results hereinafter mentioned. As will appear they finally reduced the matter for determination by the Board to one point—What under existing conditions would be a fair wage in money for the employees?

Mr. Gale, for the company, contended that in order to properly determine the point in issue the Board should consider:—

- (1) The scale of wages paid for similar kinds of work in other industries;
- (2) The relation between wages and the cost of living;
- (3) The hazards of the employment;
- (4) The training and skill required;
- (5) The degree of responsibility;
- (6) The character and regularity of the employment;
- (7) Inequalities of increase in wages or of treatment, the result of previous wage orders or adjustments, and
- (8) Other relevant circumstances.

The employees did not seriously, if at all, deny the applicability of the enumerated considerations.

An additional contention of the company was its alleged inability to continue to pay upon the scale in the award already mentioned, but after a thorough examination into the financial condition of the company the Board expressing no opinion as to the relevancy of the mentioned contention to the issue of the

fairness of a wage, finds that such contention has not been, as matter of fact, sustained.

The company's notice given under Section 57 of the Act and resulting in the proceedings now before the Board was confined to the matters of wages and overtime, and the employees' notice was confined to wages and the two conditions concerning clothing already mentioned. During the enquiry the respective parties abandoned their respective demands and contentions except those relating to the hourly rate of pay in money, all conditions including those respecting overtime and rates for overtime to continue as agreed following the last award.

The company has been accustomed for some years to deal with its employees collectively for services covering a fixed period of time and usually upon an annual basis. The last agreement made expired on June 30th, 1921, but both parties carried it out until December 1st, 1921, without formally extending it, and the employees have carried out their obligations under it until now. The Board suggests that the further period of relationship thus entered upon some seven months ago might well be continued for another five months upon the same terms of relationship as existed when the period began. This suggestion is based upon certain of the considerations urged by the company itself.

The Board having heard and read the evidence submitted and having applied to the facts disclosed the considerations urged by Mr. Gale and hereinbefore enumerated, especially numbers one, two, six, seven and eight thereof, recommends for the settlement of the dispute, according to the merits and substantial justice of the case, as follows:—

1. That from the 1st day of December, 1921, until the 1st day of July, 1922, the wages of the employees continue as recommended under the award (a copy whereof is hereunto annexed)

made under the Industrial Disputes Investigation Act, 1907, on the 26th day of August, 1920, by W. P. Grant, Chairman, and George D. Kelley, and subsequently accepted by the company and the employees, and likewise that in all other respects the terms of said award be continued in effect for the like period.

2. That the company pay to its employees and each of them any difference between wages payable under the immediately preceding recommendations and wages paid or earned or which may be paid or earned on any lower scale imposed by the company on its employees or on any of them at any time or times between the first day of December, 1921, and the 1st day of July, 1922.

Respectfully submitted,

WILLIAM F. O'CONNOR,
Chairman.

FRED BANCROFT,
Member of the Board.

Ottawa, January 9th, 1922.

REPORT OF PREVIOUS BOARD, DATED AUGUST
26, 1920.

In the matter of The Industrial Disputes Investigation Act, 1907, and of a dispute between The Hull Electric Company, employer, and certain of its employees being members of Division No. 591, Amalgamated Association of Street and Electric Railway Employees of America, employees.

To the Honourable
The Minister of Labour,
Ottawa.

The Board of Conciliation consisting of Geo. D. Kelley, Ottawa, representing the Hull Electric Company, Joseph Gibbons, of Toronto, representing the employees of the Company, with W. P. Grant, as Chairman, appointed to investigate the above dispute, met in the Court House at Hull, on August 3rd, 1920. There were also present Mr. Gordon Gale, General Manager of the Hull Electric Co. and Messrs. Jos. A. Noel, Jno. J. Gibeault and Wm. Sutherland, a committee representing the employees. After having heard the representations of the employees for better wages and

changed working and other conditions the Board suggested that the employees' committee and Mr. Gale meet together and agree, if possible, on as many of the thirty-four demands itemized in the employees' letter of May 28th and thus enable the Board to more easily reach the important points in the dispute. This was agreed to and the Board adjourned to meet the following day. When the sitting was resumed on the morning of August 4th, the employees' committee had added Mr. Jennings, a Union Official, to their number. During the adjournment quite a number of items in dispute including in particular the claim of a fixed minimum wage for listed spare men (an entirely new demand) were conceded by the Company. The Board then proceeded to take up the wage question which of course was the outstanding feature of all the points in dispute, in fact other matters outside of the wage question were touched on so lightly as to lead your Board to the conclusion that, beyond the changes in present conditions agreed upon between Mr. Gale and the employees' committee, it would inadvisable for us to further modify them, believing as we do that the disruption of the existing schedules under present conditions would not lead to inconvenience and confusion. Indeed we might say of the Hull Electric employees as the Montreal Board of Conciliation in their recent report said of the Montreal Tramway employees "To the credit of the employees be it said that they did not appear disposed to insist upon an immediate reduction in the number of working hours, in fact the majority of them voluntary work ten, eleven and twelve hours a day and often seven days a week."

It might be well at this time for your Board to express its appreciation of the courteous and fair spirit in which each side presented its case, and it is further noted with great pleasure the evident thoroughly good understanding and feeling that exist between the officials of the Hull Electric Company and their employees.

The bulk of the discussion of the wage question centered on the scale to be adopted for the conductors and motormen, these being the large majority of the employees. Naturally their representatives in support of their demand for higher wages laid stress on the rates paid to street railway men in cities where the wage scale was considerably higher than Hull, but when it is considered that the maximum scale of wages paid to street railway motormen and conductors in different towns throughout Canada ranges from 33c. to 72½c. an hour it is but fair to presume that the reason will be found in local conditions.

Taking this as our guide the next step was to determine what would be a fair increase over the existing rate. The increase last year had been from 36 cents an hour to 41 cents,

practically 14 per cent. Adopting the same ratio this year would result in advancing the rate to 47 cents, an increase of 6 cents an hour. Your Board, however, felt that by deciding on a maximum rate of 48 cents an hour, an increase of 33 1-3 per cent over the pay of 1918-1919 and nearly 100 per cent over the pay of the year ending May 1st, 1918, they were making a decision that should be under existing conditions acceptable to both sides.

The following is our finding for all the different classifications of employees:—

No. 1.—FREIGHT CREW—Ten-Hour Day.

	Per hour.
Conductors52
Motormen52
Brakemen43
Trolleyman41

No. 2.—POWER PLANT EMPLOYEES — Eight-Hour Day.

Power house operators48
Substation operators45
Power house oilers42

No. 3.—TRACKMEN—Nine-Hour Day.

Trackmen (first class)43
Trackmen (second class)40

No. 4.—NINE-HOUR DAY SHIFT, TEN-HOUR NIGHT SHIFT.

Machinist, first class60
Armature winder, first class53
Armature winder, second class43
Blacksmith47
Carpenter, first class54
Carpenter, second class47
Air brake fitter45
Day shift.	
Pitmen and troublemen, 1st class49
Pitmen and troublemen, 2nd class45
Night shift.	
Pitmen and troublemen, 1st class47
Pitmen and troublemen, 2nd class44
Car cleaners, 1st class42
Car cleaners, 2nd class40

No. 5.—Sweeper and snow plow work, 3 cents in addition to schedule rate.

No. 6.—Flagmen or switchmen, \$3.00 per day.

No. 7.—Aylmer station agent, \$130.00 per month.

No. 8.—Conductors and Motormen:—

	Per hour.
First six months41
Second six months44
Second year46
Third year and thereafter48

No. 9.—Nine-Hour Day:—

	Per hour.
Linemen first class52
Linemen second class46
Motormen first class42
Motormen second class40

No. 10.—Uniforms (One each year).—

Passenger motormen and conductors pay: First year, full cost; Second year, two-thirds; Third year, one-third; Fourth year, nil.

Winter Trousers (one pair every second year.)

Passenger motormen and conductors pay: Full cost; two-thirds; one-third; nil.

Winter overcoats (one every third year.)

Passenger motormen and conductors: Full cost; two-thirds; one-third; nil.

No. 11.—Minimum of 2½ hours for trippers and trailers.

No. 12.—Tickets and change to conductors on main line \$60.00, and on other lines \$40.00.

No. 13.—Listed spare men reporting for duty three times each day shall be paid a minimum of \$30.00 per half month but if they work in excess of the hours to cover this amount they shall be paid at the schedule rate per hour.

No. 14.—When a man is compelled to work over schedule time, time and one-half will be allowed until he is relieved from duty. If he is called before six hours rest has been allowed the overtime rate shall continue.

No. 15.—That it be permitted to post notices of meetings of employees in conductors' and motormen's rooms.

That all differences arising out of suspension, dismissal charges, accidents, wages, etc., may be investigated by a committee selected of and by the employees.

That all other working conditions shall remain as at present.

The Board recommends that this agreement be retroactive from July 1st, 1920, and that it continue in force for a period of 12 months from the said date. All of which is respectfully submitted.

(Sgd.) W. P. GRANT, Chairman.

(Sgd.) GEORGE D. KELLEY, Member of Board.

Minority Report

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Hull Electric Company, employer, and certain of its employees being members of Division 591, Amalgamated Association of Street and Electric Railway Employees of America, employees.

To the Honourable
The Minister of Labour,
Ottawa, Ont.

After careful consideration of the different matters involved in the above mentioned dispute I am unable to agree with the findings of my fellow members of the Board of Conciliation appointed herein.

The last agreement between the Hull Electric Company and its employees expired June 30th, 1921, since which date the parties concerned have been carrying on negotiations, which finally resulted in the present Board coming into being.

Under previous agreements going back to 1918 the following wage rates were in force for motormen and conductors.

1918 maximum rate 36c per hour.

1919 maximum rate 41c per hour.

1920 maximum rate 48c per hour.

On December 1st, 1921, the company put in force a maximum rate of 43c per hour.

To the above rates should be added an amount of 4c per hour to cover cost of suits, overcoats, transportation, etc., supplied to employees.

As motormen and conductors are the principal parties concerned in this dispute, and as their wages and working conditions are reflected on other employees my report has principally reference to them, but my conclusions include all employees.

On behalf of the employees it was argued that their rates of wages had not been and were not now commensurate with the cost of living. The company denied this contention. The employees, in support of their claim, submitted figures from the *Labour Gazette*, but on examination of these figures it was found that the contention of the employees was not supported. A graph filed by the company and which was not disputed established that since 1918 (with the exception of a few months) the cost of living as shown by the *Labour Gazette* was well below the wages of the employees. It must be borne in mind that the said table of cost of living is not one showing the bare cost of subsistence, but instead is a table allowing a comfortable margin. In addition to the cost of food it also includes fuel, light, rent and clothing. The latter

item is important as it shows the need of adding to the actual wage paid to the employees by the hour the sum of 4c being the equivalent of the concessions that they receive.

The following table, while not including every month of the year to which it has reference, still fairly represents the relation of the rate of wages of the Hull Electric Company motormen and conductors to cost of living:—

	Weekly wage including clothing, Hourly etc. Nine hour day, rate		Cost of living including food, clothing, light, rent, etc.		
	Six day week.	plus 4c.	June	July	August
1918\$21.60	.40	\$20.36	\$20.66	\$21.20
1919\$24.30	.45	\$21.95	\$22.02	\$22.86
1920\$28.08	.52	\$26.81	\$26.92	\$26.60
1921\$25.38	.47	\$21.74	\$21.53	\$21.98

Employees, however, actually earn more than the above amounts owing to certain advantages derived from overtime, etc., and the company filed a table showing such actual earnings to be as follows:

Main Line

Conductors, actual earnings....	\$1,639.70
Motormen "	1,561.97

Chelsea Road Line

Conductors, actual earnings....	1,567.86
Motormen "	1,521.24

Belt Line

Conductors, actual earnings....	1,540.19
Motormen "	1,358.34

The employees further contended that their wages were lower and had been for some time lower than the wages of men engaged in similar classes of work or in work that could be in any way compared thereto.

In support they filed a statement showing wages in Canada and the United States of electric railway employees as of January, 1921. On behalf of the company this statement was criticized on the ground that it did not disclose present existing conditions. Evidence

was submitted by the company showing the trend of wages, and in this evidence it was emphasized that reductions of wages ranging from 20 per cent downwards were taking place in practically all lines of employment. Several recent decisions were cited where wages of electric railway employees had been reduced from 12 per cent to 10 per cent, emphasis particularly being laid on the recent decision in connection with the employees of the electric railway in the city of Montreal whose wages had been reduced from 55c per hour to 48c. The company also pointed out that on lines of railways operating in Canada other than electric railways reductions had been even greater. Classified labour in such occupations and from which classification employees similar to those now under discussion could be drawn had been made the subject of a reduction of 20 per cent, the former rate being 50c per hour and the present rate 40c per hour. The company also adduced evidence to show that similar lines operated in the Province of Quebec (where the lines of this company are located) were paying very considerably lower rates than the company itself had been paying up to December 1st, 1921. For example, the rate in Levis, P.Q., and Sherbrooke, P.Q., both centres comparable to Hull, is 40c. per hour. The rates in Ontario, at places such as Sarnia, Oshawa, Pictou, Cornwall, Peterborough, Sault Ste. Marie, etc., range from 45c. per hour down to 40c. per hour. Where in Ontario higher rates of wages prevailed it was submitted that these were caused owing to different working conditions and to increased cost of living existing at the points concerned. Full consideration of these points had been given by other Boards of Conciliation in making their findings in disputes in which this company was concerned.

The employees further argued that the financial condition of the company

justified its paying a liberal rate of wage. In support of this contention they submitted extracts from certain reports filed by the company with the Department of Railways and Canals. The company produced complete statements of its financial condition and as a result the following facts were undisputed.

1. That the capital stock of the company has a par value representing actual investments of \$292,000.

2. That no dividend of any nature or kind has been paid or earned on the said capital since the year 1902.

3. That the company has been and still is a heavy borrower, such borrowing being for the purpose of capital account and not for maintenance.

4. That the amount of the indebtedness so incurred at the present time is over \$1,300,000.

5. That the company is now in arrears for interest payments on such borrowing.

6. That there is no immediate prospect of the company being in a position to liquidate the said arrears.

While the earnings of any company cannot be taken as the sole guide in arriving at what rate of wages should be paid the financial condition of the company is one that should be taken into consideration.

The Board was content to accept the material filed by the manager of the company and did not attempt any individual examination of the company's books.

Under the circumstances, therefore, I must conclude that the working conditions and scale of wages now in force are fair and equitable.

(Sgd.) GEO. D. KELLEY,
Member of Board.

Dated at Ottawa, Jan. 11th, 1922.

Report of Board in dispute between the Dominion Coal Company, Nova Scotia Steel and Coal Company and Acadia Coal Company and certain of their employees respectively

A REPORT was received from the Board established to deal with the dispute between the Dominion Coal Company, the Nova Scotia Steel and Coal Company and the Acadia Coal Company, being coal companies in Nova Scotia comprised within the British Empire Steel Corporation, and certain of their employees respectively, being coal miners, members of District No. 26, United Mine Workers of America. The Board was composed as follows: Mr. U. E. Gillen, chairman, Colonel W. E. Thompson and Mr. James Ling. The report was signed by the chairman and Colonel Thompson and contained recommendations as to a means of settlement of the dispute. A minority report was presented by Mr. Ling.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Dominion Coal Company, Nova Scotia Steel and Coal Company, and Acadia Coal Company, and certain of their employees, being members of District No. 26, United Mine Workers of America.

To the Hon. James Murdock,
Minister of Labour,
Ottawa.

Sir,

A Board of Conciliation and Investigation was applied for 21st of December, 1921, by Mr. Robert Baxter, President, and Mr. Jas. B. McLachlan, Secretary, District 26, U.M.W. of A., in the matter of a dispute regarding proposed reduction in rates of pay. The application stated there were ten thousand employees directly and three thousand indirectly affected.

On the 24th of December, 1921, the Hon. Senator G. D. Robertson, Minister of Labour, authorized the establishment

of a Board, and that work was completed by the Hon. James Murdock, Minister of Labour, January 6th, 1922. The members of the Board are Mr. U. E. Gillen, Chairman, of Toronto, Ontario; Col. W. E. Thompson, Barrister, Halifax, N.S.; and His Worship Jas. Ling, Mayor of New Waterford, N.S. His Worship was nominated as a member of the Board by the employees.

Mr. D. H. McDougall, President, Nova Scotia Steel and Coal Company, Limited, also Vice-President of the Dominion Coal Company, Limited, and Acadia Coal Company, Limited, addressed the Hon. James Murdock, Minister of Labour, on the subject under date of 31st December, 1921, stating among other things "The Company cannot concur in the necessity for the appointment of Board of Conciliation and it will not name a representative to be a member of the Board."

The cause of dispute, also the reason for employees requesting a Board, may be attributed to a notice, dated Sydney, N.S., 19th December, 1921, to all employees, signed "Dominion Coal Company, Limited." The notice follows:

The Agreement covering wages made at Montreal on the 8th November, 1920, expires at 31st December, 1921, and effective that date, all the wage rates are cancelled.

Notice is hereby given that on and after the 1st January, 1922, the wages, day rates and contract mining rates paid to the employees ofcolliery will be the rates which become effective 1st January, 1920, less 25 per cent (subject to minor adjustments to certain individual rates).

All payments included in the term 'consideration' are subject to revision from 1st January, 1922.

All local contracts for driving, roadmaking, landing, tending, etc., are withdrawn on 2nd January, 1922.

The Board held meetings in Board of Trade Rooms, Halifax, January 16th, 17th, 18th, 19th, 20th, 21st, 23rd, 24th, 25th, 26th, and 27th. The meetings of the 19th, 20th, 21st, and 23rd, were open

to the press and public. The other meetings were private for the purpose of getting the parties to the dispute to agree. The employees made a proposition to their employers on the 18th, also on the 19th, that was considered, but not accepted. And the employers made a proposition to the employees on the 24th that was not accepted.

The employers were represented at the meetings by Mr. D. H. McDougall and his assistant, Mr. F. W. Gray. In addition thereto, the Dominion Coal Company, Limited, and the Nova Scotia Steel and Coal Company, Limited, were represented by Messrs. E. P. Merrill, A. S. McNeil, M. Blue, H. J. McCann, A. McColl, J. J. McDougall. The Acadia Coal Company, Limited, was represented by Messrs. A. McColl, J. J. McDougall, and M. Blue.

The employees were represented at the same meetings by Mr. Robert Baxter, President; Mr. W. P. Delaney, Vice-President; and J. B. McLachlan, Secretary and Treasurer, District 26, United Mine Workers of America, together with the following members of their Executive Board: Messrs. Angus McPhee, Louis McCormack, D. Livingston, G. D. Coleman, Wm. J. McKay, Alonzo Hall, and J. J. McNeil.

The parties to the dispute were given ample opportunity to submit to the Board any oral evidence or written statement they desired. In addition to a large amount of oral evidence, forty-one exhibits, some consisting of several printed or typewritten pages, were submitted, after which Mr. Baxter for the employees and Mr. McDougall for the employers expressed themselves as being satisfied to rest their case and complimented the Board on the manner in which the meetings were conducted.

The Board considers this a very unusual and exceptional case, therefore they intend to quote in their report enough from the exhibits filed by the parties to the dispute to fairly state the facts as presented to the Board.

Under date of 31st December, 1921, Mr. McDougall addressed the Hon. Minister of Labour about meetings with representatives of employees concerning a new agreement, and attached copies of certain letters to and from representatives of the men we now quote.

29th October, 1921.

J. B. McLachlan, Esq.,
Secretary-Treasurer,
United Mine Workers of America,
District No. 26, Glace Bay, N.S.

Dear Sir;

Referring to your letter of 22nd December, 1920, stating that the wage agreement concluded on November 6th last had been approved and adopted by District No. 26 and asking this Company to put the agreement into effect; we now note it expires 30th November, and, according to the memorandum, both parties are to meet in Halifax twenty days before termination of the agreement "for the purpose of arranging a new understanding."

Our representative will attend at the Halifax Hotel at 10 a.m., on November tenth, in conformity with this arrangement.

We think it desirable to notify you at this time that business conditions compel us very reluctantly to ask for a reduction in wages that shall be effective at the expiry of the current agreement. A schedule of rates will be handed to you on November tenth covering the Dominion Coal Company's mines in Cape Breton and Springhill.

In making this announcement to you we would state the Company does not desire to reduce wages, and the management would be happy to continue the present rate of wages did markets and prices permit, but, unfortunately, they do not.

We do not propose a wage reduction greater than business conditions make necessary, or one that will lessen the earnings of the mine workers to a point that will bear onerously upon them when there is taken into consideration the decreased cost of living that has developed since recent wage increases were agreed upon.

A reduction in wages is necessary to enable this Company to maintain its two main avenues of disposal of coal; namely, the sales to general consumers of coal, and sales to the steel plants.

General coal sales comprise three main outlets, namely, the Montreal market, the railways and bunker sales, and in all three cases the

Company must meet the competition of coal-producing countries where miners' wages have undergone heavy reductions in recent months, or where wage reductions will in all probability take place before the opening of the St. Lawrence navigation next spring.

Apart from a likelihood that coal will be sold in the United States at the pit mouth at lower prices next spring than was the case during the summer of 1921, the lessening premium on New York funds and the certainty of a substantial reduction in railway freight charges will combine to reduce the delivered price of coal in the Montreal market next summer, and will very substantially lower the selling price of our own coal there.

As you know, if we bank coal during the winter it cannot be sold before the summer of 1922, and payment will not be received by the Company until July or August of next year. The wages paid to the mine workers during the coming months must therefore be calculated on the selling prices of next summer, and it is necessary to effect a reduction in wages before this Company can plan a programme of output and banks for the coming winter. No banking programme can be undertaken under existing wage rates, as the coal would cost us more than we could sell it for.

With regard to coal supplied to the steel plants, we may state, briefly, that at current rates of wages at the coal mines we cannot mine coal at a cost which will permit that coal to be used to manufacture steel under commercial conditions.

While the Company is compelled to ask for a reduction in wages in order to enable it to sell its products, it is fair to point out that the increases given to the workmen since 1914 were successively asked for and granted to meet the increased cost of living.

These increases have totalled 120 per cent in general application, but in individual instances have been much greater.

The increase of last November was given to meet the rapid jump in living costs which took place in the summer of 1920 and reached the peak in July, 1920, at which time the total costs of living were 100 per cent over those of 1914. Since that date living costs have fallen to a point that is between 50 and 60 per cent above 1914 costs.

Wages are therefore 120 per cent above 1914 figures and living costs are from 50 to 60 per cent above.

As the Company has no fund from which it can pay wages unless these are at least equalled by the selling price of the products, it has no alternative but to reduce wages, but in view of the substantial decrease in the cost of living, the management feels that no hardship will be imposed upon the workmen.

The alternative to a reduction in wages is such a restriction of the Company's ability to

produce coal at market prices as will cause general idleness at the collieries. With a reduction in wages sufficient to meet market prices the Company will be able to avail itself of its usual markets.

The likelihood of fairly steady employment under a lower scale of wages or work for one or two days per week under the existing scale of wages, are the alternatives imposed by the business conditions of the time, conditions that as stated are not within the Company's power, or the power of your organization to modify or control, and we submit this to your earnest consideration.

Yours very truly,

(Sgd.) E. P. MERRILL,

General Manager.

In reply, the following letter was received from the Secretary of District No. 26:

4th November, 1921.

Mr. E. P. Merrill, General Mgr.,
Dominion Coal Company, Limited,
Sydney, Nova Scotia.

Dear Sir:

This is to advise you that your favour of October 29th was received at this office October 31st.

The Officers of this Union have had your communication under serious consideration for several days, and after giving due weight to all that you had to say while the miners' wages should be reduced, they instruct me to reply that we cannot agree to the proposed changes in the rates downwards.

Without attempting here to give any argument for our position I am asked to remind you of the very handsome earnings your Company has made during the last few years, while the miners' wage, increases, in same period, were such, in the race with rising prices, as to leave the wage rate an ever increasing distance in the rear.

We note that you state that your representative will attend at the Halifax Hotel, at 10 a.m., on November tenth, for the purpose of arranging a new wage understanding, and that a schedule of the new rates which you propose will be handed to us on that date.

I am instructed to say that the above arrangement for the meeting is entirely satisfactory to us, and we shall be on hand at Halifax Hotel at 10 a.m., November tenth.

I am further instructed to say that on that date we shall present to your representative a copy of the proposed changes of present wage agreement which we desire made.

On behalf of the Executive Board of District 26 United Mine Workers of America, I am,

Yours truly,

(Sgd.) J. B. McLACHLAN, Secretary,
District No. 26, U.M.W. of A."

At the meeting held in Halifax on November 10th and 11th the contract was by mutual consent extended for period of one month, the following memorandum being made and signed by the several parties to the Montreal Agreement:

Halifax, N. S.,

11th November, 1921.

In accordance with the provision of the agreement dated at Montreal on November 8th, 1920, between the Dominion Coal Company, Limited, the Nova Scotia Steel and Coal Company, Limited, and the Acadia Coal Company, Limited, of the one part, and the United Mine Workers of America of the other part, a joint meeting was held in Halifax on November 10, 1921, and continued in session during November 11, 1921, whereat it was mutually agreed that the said agreement be continued for a period of one month additional, or until the 31st of December, 1921. It was further agreed that a meeting of representatives of the above named companies and representatives of the United Mine Workers of America, be held not earlier than December 15, 1921. The time and place of said meeting to be agreed upon by a joint committee appointed for that purpose.

JOHN MOORE,

On behalf of the International
Union U. M. W. of America.

ROBERT BAXTER,
ANGUS MCPHEE,
LOUIS MCCORMACK,
DAN LIVINGSTON,
G. D. COLEMAN,
WM. J. MCKAY.
ALONZO HALL,
W. P. DELANEY.
J. J. McNEILL,"

On behalf of District No. 26
U. M. W. of America.

Dominion Coal Company, Ltd.
H. J. McCANN,
Ass't. General Manager,

A. S. McNEILL,
General Superintendent.

Nova Scotia Steel and Coal
Company.
A. McCOLL,
General Manager.

Acadia Coal Co., Limited.
J. J. McDougall,
Ass't General Manager,

On December 16th the representatives of the United Mine Workers and representatives of the Dominion Coal Company and the other coal companies associated in signing the Montreal Agreement, met in Montreal and continued in daily session until the 19th December. The result of the meetings is summarized in the following statement submitted by the associated companies and incorporated in the minutes of the final meeting.

Pursuant to the agreement made in Montreal on 8th November, 1920, that prior to the expiry of this agreement both parties signatory thereto should meet "for the purpose of arranging a new understanding," the representatives of both parties, having met in Halifax on 10th November, agreed on the 11th November to extend the term of the Agreement until 31st December, 1921, and to meet again in Montreal to resume the discussion.

Meetings took place commencing on the 11th and extending to the 19th December, at which the Dominion Coal Company submitted a draft form of contract which it was willing, along with the other companies, to make with the United Mine Workers for the period ending 30th November, 1922, providing for certain working conditions and a rate of wages 25 per cent below the rates in effect before the increase granted under the Montreal Agreement.

The representatives of the men stated they could not accept the contract as offered, and presented a series of sixteen demands concerning working conditions ending with a statement that they could not consider any revision of rates downwards. Later, as a counter-proposal, the U. M. W. representatives asked for a renewal of the Montreal Agreement for three months.

This proposal the Company was unable to agree to, and the United Mine Workers stated they would apply for a Board of Conciliation.

No understanding having been arrived at to replace the Agreement of 8th November, 1920, the companies represented took the position that they were free to take such steps as they might consider advisable in their own interest.

In offering a contract which included a reduction in wages the companies expressed the hope and belief that such a reduction would enable them to regain for the sale of coal many of the markets lost during the war, and thereby make for much steadier work at the collieries.

The Board asked that the applicants for the Board (representatives of the employees), submit their evidence and

statements first, followed by evidence and statement from representatives of the companies, and stated that the Board would then receive evidence and statement in rebuttal from both parties to the dispute, and that procedure was followed. Mr. Baxter, President of the United Mine Workers of America, opened their case by ably reviewing the situation at some length and later filed the following typewritten statement:

THE BRITISH SITUATION.

The officials of the Coal Companies, when at Montreal, stated that the competition from Great Britain was threatening their markets on this side. I admit that it is true that cheap coal is coming in from Great Britain, the same being sold at \$4.75 at New York. But this should not alarm the companies of this province, as we know that is only a temporary condition of the trade, when we consider the selling price of coal at the mines in Great Britain is as follows:—

	Current Quotations British Coal f.o.b. Port, Gross Tons	
	Dec. 24	Dec. 31*
Cardiff:		
Admiralty, large.	26s.	25s. & 26s. 6d.
Steam, smalls....	19s. 6d.	18s. 6d. & 19s. 6d.
NEWCASTLE:		
Best Steams.....	25s.	23s. 6d. & 24s.
Best Gas.....	22s.	21s. 6d. & 22s.
Best Bunkers....	21s. 9d.	21s. & 22s.

*Advance over previous week shown in heavy type, declines in italics.

The above prices can be easily met competitively by coal produced in this Province, and in our opinion there is not enough coal sent into the American markets to materially affect prices.

AMERICAN COMPETITION.

The companies in their statement to the Minister of Labour claim that they cannot compete with reduced prices on account of some sections having accepted wage reduction. We admit this to be true, that some sections have got a cut in wages, but the percentage of coal produced in these fields does not govern

prices of bituminous coal on the North American Continent, but the agreement negotiated by and between the U. M. W. of A. and the various operators' associations of the North American Continent does establish a rate upon which to base the market price of this commodity. This settlement will not be known until the expiration of the present contract which expires March 31st, 1922.

Therefore we believe in face of this condition that the *status quo* or the present rate should continue to prevail until April 1st, 1922.

COST OF PRODUCTION.

We do not have access to the companies' cost sheets. We are denied that privilege, but we have an opportunity to make calculations which they cannot deny us. We have several mines producing three long tons of coal per day, per man. Three tons of coal at the mine mouth is equivalent to \$18.00 value produced per day per man. Six dollars is much more than the average wage in these mines, but for the sake of easy calculation, we will call it six dollars. Hence the actual wage cost per ton must be two dollars. These conditions could be developed in all of the mines by practical and economic management, and would consequently obviate the necessity of the present management procuring a reduction in the existing wage rate, and we deny the justice of the companies' proposition in an attempt to reduce the miners' wage or to penalize them in any manner for the impractical and uneconomic management of the mines in this District.

VALUES.

The companies have informed us that they have no intention of sustaining any loss at the present time. We feel that companies should not be averse to sustaining some loss during this period of readjustment. The accumulated surpluses of these various companies which were created from 1916 to 1920 inclusive have now increased in purchasing power 35 per cent according to the figures given by the Companies in their own exhibits. Not being satisfied with the automatic increase in the value of existing surpluses they now seek to penalize the miner in reducing the number of dollars that may be earned by the miner, which will result materially in reducing his present standard of living. The miner contends and believes that he and his family are entitled to more than a wage that merely covers the cost of maintaining himself and family. He is surely entitled to a wage that will permit him to live up to a decent standard of living and enable him to save a sufficient amount of money to take care of him in declining years when he is no longer able to work.

It would indeed be a calamity and a bleak outlook for the worker, if, in his old age, he has to depend on the charity of his friends or some county institution. This condition, I am sure, does not or is not, conducive to good citizenship, nor is it an incentive to the worker to look forward to such an end, and we hope that this Board will consider these facts in rendering its decision in this case.

THE PRESENT ATTITUDE OF THE COMPANIES.

In recent years economic conditions have varied very much and usually in favour of the worker, particularly during the war time period.

Independent of favourable conditions, we coal miners were very reasonable, and at no time sought to impose our economic strength upon the employer. Knowing the nation's dire need for coal during the war period, we could at that time have exacted to the last penny, but in the interest of peace and harmony, when our country was in jeopardy we made substantial sacrifices. Our highest demands at any time did not exceed twenty-five per cent, our greatest increase at any time was not more than twelve and one-half per cent, or one half of our demands. We do not find the same motive impelling the operators at this time that impelled the miner at a previous time. The operators at this time come forward in an attempt to reduce the present rates one-third or thirty-three per cent, but we believe that the miner's wages are sufficiently reduced when the decreased number of days worked are taken into consideration.

HISTORY AND HAZARDS OF COAL MINING.

The coal miner has always been behind other classes of labour until recently. It is an historical record that in the early days of coal mining in Great Britain, men were part and parcel of the coal property, therefore owned by their so-called masters, this at a time when other workmen had the right to sell their labour on the highest market. This state of affairs was carried on until 1665 when they were granted the same rights and privileges as other workers employed. The cause for such generosity was that the markets had increased beyond the supply, and conditions had to be modified and improved in order to induce men, women and children, as was the custom in those days, to enter the mines with a view to increasing production. Miners at that time could not understand the meaning of the change, some being suspicious as to the object of the so-called masters or employers. Their working conditions were of such a nature that they had no opportunity to develop their intellect to a point where they could understand the value of the change. Although the change

made great improvements, yet working conditions in those days were horrible. Families arose to go to work at 4 a.m., carrying tools and timber to the working face, remaining there until dark, and then the day's work was only complete when they had sawed props of a sufficient length to be suitable for the following day's work.

Under the agitation and intelligent leadership of Alexander McDonald, conditions were improved somewhat at a later date. On the Continent of America in 1850 coal was being mined in large quantities. Although in a new country and coal handy to the crop, yet conditions offered coal miners were not equal to those of other trades. It was a custom in those days for the miner to have a dog which was his buddy, and which hauled him in and out and assisted in hauling their coal. It is recorded that miners had in those days much trouble in finding suitable accommodation for their buddies. Those conditions continued until 1861, or until the commencement of the Civil War, when the miners, as they always do, flocked to the colours in great numbers, and men were imported from other nations to produce the needed coal. After peace had been declared and some of the miners had returned, it was found that the coal industry had been developed far beyond the needs of the nation in normal times, resulting in the closing down of many mines and broken time in other mines. Large masses of men were out of employment. The result was keen competition among mine owners, with a continuous dropping of prices to try to capture the markets, and as the companies always do, they proceeded to cut down the wages until conditions for the miners became unbearable. The result was industrial strife, resulting favourably sometimes for the miner and sometimes against him. Usually public opinion was against the miner, as the press could always make it appear that he was solely responsible. Those conditions continued to prevail for many years, until the organization of the United Mine Workers of America became strong enough to present the case of the miners before the public, and in recent years conditions have been gradually developing to be like those of other crafts. Now we feel keenly disappointed when we note the present attitude of the coal companies, which simply is an attempt to drive us back to those deplorable conditions before mentioned.

The dangers of mining have always been great. From its inception there was no knowledge of ventilating methods, and the result was practically no ventilation, making conditions such that workmen were aged and worn after eight to ten years' service. The next great danger was, as mines were sunk deeper and their lack of knowledge of proper timbering for the single entry system, that many of

these entries fell in, and the employees were entombed and invariably lost. Conditions were so bad that the people became horrified at the numerous disasters occurring. Alexander McDonald, who was the miners' advocate in the House of Commons, had a bill passed compelling mine owners to have a double entrance to the mine. The next great danger confronting the miner was that, as the mines were developed to a lower strata and became more gaseous, explosions were numerous, sometimes wiping out almost an entire village. Mining experts were at a loss to know how to meet the situation. It is only recently that we learned that an explosion is possible where one-half of one per cent of gas is in the air, a quantity that cannot be detected with an ordinary safety lamp. This, mixed with the proper quantities of coal dust and air, has sufficient inflammable properties to cause a terrific explosion, and even under modern methods of mining, the hazard of mining is extremely great, and the fatalities are indeed numerous. For each million tons of coal produced in this District, the fatalities are more than four deaths, and injured men are very numerous. Taking into consideration the hazards of the occupation, the miner should indeed have something more than a mere subsistence wage, and we contend that the proposed rates of the companies will not permit him that.

Statement filed by Mr. Baxter on behalf of the employees, showing the number of days certain men worked July 1st to December 31st, 1921, and the proposed new rate effective January 1st, 1922.

DOMINION NO. 1, UNDERCUTTING MACHINE

	No. of days worked	Rate per day in effect Dec. 31st, 1921	Rate put into effect by Com- panies Jan. 1st, 1922

George Dumphy...	141	4.79	3.20
John Purvis.	144	7.13	4.75
Murdock Living- stone.	139	5.25	3.51

Mr. J. B. McLachlan followed Mr. Baxter with a general statement on behalf of the employees, and then read and commented on what was said to be the address of Mr. R. M. Wolvin, President of the British Empire Steel Co., at a meeting of the Board of Directors of the Dominion Steel Corporation in March, 1921. The address is next quoted and then some other statements that were read and filed by Mr. McLachlan.

I have pleasure in presenting to you the report of your Board of Directors, and financial statements covering your Corporation's activities for the past fiscal year, and I beg to move the adoption of the report as now before you.

I believe, in view of the conditions which prevailed in all branches of industry during the period covered by the report and statements, that you will regard the results as reasonably satisfactory. The volume of business was less than previous years, and this is particularly true as regards the British market, the contraction having been brought about by the serious depression in Great Britain, and by the keenness of Continental European competition.

Nevertheless during all these trying times your Company, the Dominion Steel Corporation, as one of the greatest industrial institutions in Canada, have endeavoured to maintain operations at the largest capacity possible, recognizing its obligations to the country, and to its employees, and you can more readily appreciate this when I tell you that the Dominion Steel Corporation disbursed in wages and salaries last year the sum of \$21,839,285.25.

Since our last meeting your Company has not undertaken any extensive improvements. As stated in the report of the Directors, however, the 60 new by-product coke ovens contracted for last year have practically been completed; new blacksmith and electric repair shops, improved facilities for the handling of ore and limestone, and additional blowing capacity in order to permit of the operations of a larger number of blast furnaces have been installed, sixty new freight cars were purchased during last year, and locomotives and other rolling stock have been largely rebuilt and repaired, this being necessitated as a result of the extremely strenuous service of the previous five years. Much improvement has been accomplished at the coal mines, particularly in connection with the power plants and underground development.

The result of these improvements can be summarized by stating that the Dominion Coal Company has now a daily producing capacity of 15,000 tons of coal compared with 10,500 tons a year ago, and the Dominion

Iron & Steel Company now has a coke producing capacity of 2,600 tons per day as compared with 1,300 tons a year ago. Furthermore the steel plant is now fully equipped to use this coke supply, and the balancing of departments will now permit the operation of five blast furnaces at one time, which has not been possible since 1916. At this time coke was manufactured in ovens of a type which are now considered practically obsolete and on which production costs were very excessive as compared with present day practice.

As you are no doubt aware, the Company had various claims against the owners of vessels, which were under time charter. Several of these claims have now been adjusted, and in arriving at these settlements your Company has been able to acquire in very satisfactory terms the ownership of the British registered steamships "Wabana" and "Kamouraska" each of 7,500 tons carrying capacity, and the "Rosecastle" of 12,000 tons capacity, also under British register, together with a controlling interest in the Norwegian register steamship "Daghild" of 12,000 tons capacity. These vessels were all built especially for your Company's ore and coal trade and we are now in possession of a very excellent fleet of vessels peculiarly adapted for the carriage of our raw material.

The Company now owns 68,000 tons dead-weight of vessels for its various trades, and this adds to the Company's profits the earnings that would otherwise go to owners from whom we charter vessels, and in addition makes our position secure for vessels suitable for our use.

The claims against the owners of time-chartered vessels have all been settled with the exception of a dispute with the owner of one large steamship which has changed hands, and this matter is now in the Courts. Your Company has a large claim against Germany for reparations, and should be reimbursed out of the proceeds from the German property held by the Custodian of Alien Property at Ottawa. This claim is mostly in respect to owned and time-chartered vessels sunk by submarines. In addition we have a large claim against the Imperial Government for losses suffered by your Company due to the requisitioning by the Imperial Government of steamships under the time chartered to us. It appears to be most difficult to obtain adjustment to these claims, and they have not in any way been taken into the accounts of the Company.

One of the most important branches of your Company's operations is, of course, the mining of coal. The employees of your mines are members of the United Mine Workers of America, and with this Organization your Company has entered into wage agreements, for the past few years. The Dominion Coal

Company had an agreement which should have extended until the 1st February this year, but we were compelled in November, 1920, to negotiate a new contract. Had we been able to continue under the agreement until February 1st of this year, our men would undoubtedly have realized the condition into which the country was rapidly drifting, and unquestionably a contract much more satisfactory to the Company would have been arrived at. Your officials realized that the contract would be a great hardship on the Company, particularly in connection with the production of steel, and a burden also upon the industries of Eastern Canada, but every pressure was brought to bear upon us by the Government, by the Railroads, and other interests, insisting that under no condition must we permit a stoppage of the production of coal. Consequently a new contract was entered into, effective until November 30th of this year, and I may say that our relations with our employees under this contract are most harmonious. It must be recognized, however, that wages are too high to enable us to produce coal at a cost that will permit profitable operation of the steel plant under existing conditions.

Our labour is as loyal and efficient as in any other coal mining community in the world, and in spite of occasional newspaper despatches I would like you as shareholders to know that I believe the conditions in our mining towns are better than in the average mining districts, and that in my judgment our miners are better paid than the miners of any other field; that they have received greater advances in wages during the past seven years, and further, that prior to the war they earned as much or more per annum than the miners of any other coal field.

It is our constant endeavour to improve the conditions under which our men live and to pay wages sufficient to maintain a proper standard of living. At the same time it is absolutely imperative that we reduce the cost of coal to our steel plants, and to the consumers of Eastern Canada.

We have now passed through the first quarter of the present fiscal year, that is, the three months ending June 30th. We entered the new year with the full intent of regaining the coal markets of Montreal, and East. As you are aware, however, conditions in all branches of activity are most unusual, and we found, at the opening of navigation on the St. Lawrence river that the railroads had large stocks of coal; the pulp plants and other large users had on hand two to three months' coal supply, and all industry generally was operating on a minimum consumption of coal. We have come into competition with what is known as 'Distress' coal from the United States, which means coal sold at less than the cost of production and delivery, but with all these conditions to meet

we are gradually acquiring again the markets that properly belong to us. Unfortunately, however, there are a number of Canadian consumers who do not fully appreciate how greatly they could assist the country's existing unfavourable trade balance by straining a point to use Canadian coal whenever it can be obtained.

For the last sixty days our operations have been materially assisted by sales of our coal in England and Scotland, and the reports from gas plants and railroads using it in those countries are very satisfactory. I do not expect that we will be able to hold the British market, but I am in hopes that gradually our coal will find a market in some of the European countries.

Reference is made in our report to our association with the British Empire Steel Corporation, Limited, and you will realize that the acquisition by the Company of all common shares of the Dominion Steel Corporation has virtually eliminated from our Company all holders of common shares, excepting the British Empire Steel Corporation. The public, therefore, is interested in our meeting today solely as holders of the preference and preferred shares of the Dominion Steel Corporation, Dominion Coal Company, and Dominion Iron and Steel Company, or incidentally as shareholders of the British Empire Steel Corporation, Limited.

In this connection I wish to call to the attention of the holders of preferred shares, the fact that the statement for the past fiscal year shows that the dividends on your shares for the three Companies named were earned five times over. I need not, of course, emphasize the fact that business conditions are most unsatisfactory at present, and in view of this it is all the more gratifying to be able to say to you that for the first quarter of the current fiscal year ending June 30th, the Dominion Steel Corporation, after providing for depreciation, sinking funds and bond interest, has earned at the rate of over three times the amount required for payment of the combined dividends on its preference shares, and on the preferred shares of its constituent companies. I believe that we should be very well pleased with the results, particularly, as I have just stated, in view of conditions during the past three months.

The preferred shareholders of this Corporation and its constituent companies were advised of an agreement having been entered into between this Company and the British Empire Steel Corporation, Limited, whereby the preferred shares of the Dominion Steel Corporation and subsidiary companies could be exchanged share for share for the preference "B" stock of the "British Empire Steel Corporation, Limited." On 1st of August the Brit-

ish Empire Steel Corporation will deposit its 7 per cent First Preference Stock with Prudential Trust Company for the purpose of effecting this exchange, and after that date, any holders of 6 per cent Preference Shares of this Corporation, or of the 7 per cent preferred Stock of the Coal and Steel Companies who desire to exchange, may forward their certificates to the Prudential Trust Company and receive certificates of British Empire in exchange for them.

Business the world over has been passing through a period of very strenuous readjustment. While perhaps some of us may have anticipated a year ago that something of this nature would occur, not even the most far-seeing expected that anything quite so drastic would take place. Undoubtedly, however, this was the most effective manner of bringing cost down to a basis that would restore confidence, and the results are already becoming evident, in that our extravagant habits are slowly but surely giving place to economy and hard work, and I believe that in many industries the readjustment of prices is already practically complete.

Many of our Canadian industries are in need of additional financing, and this is always to be expected in a growing country possessing vast natural resources awaiting development. Present world conditions and national needs render such industrial financing exceedingly difficult of accomplishment, and the taxes imposed on Corporation earnings and upon the incomes of individuals have diverted into the national treasury funds ordinarily available for investment in new securities, and for the extension of plants. I believe that these heavy taxes are very seriously curtailing the extent of industrial operations in this country; are discouraging new development, thus reducing employment, and at the same time they are unfortunately failing to attain the purposes for which they were imposed, that is, the elimination of individual waste and a return to pre-war economies.

Fundamentally, conditions are more satisfactory in Canada than in most other countries. I am, however, of the opinion that additional protection granted to our industries so as to hold the business of this growing country to our own manufacturers for the next few years would bring remarkable results in the future.

It is most essential that we should all realize that the situation throughout the world and in this country demands the practice of every economy; we must recognize also that wages are gradually being reduced, and that the cost of labour will further decrease, both through increased efficiency, and by further reductions from the very high scale that has been put

into effect during recent years. Concurrently with this will come further reductions in the cost of living, and at the same time the income of the wage-earner should maintain approximately an equal purchasing power.

Finally, we must recognize that, in meeting these new conditions, Canadian industry must be satisfied with smaller margins of profit, and aim at greater production.

I wish you to realize how much I appreciate the support the President has received all through the past years from the Board of Directors. I have found each and every member of the Board willing to give a large amount of his time to the Company's interests, and the statement we are today presenting is very largely due to the work they have done.

The daily rate of a large number of men December 31st, 1921, was \$3.80, the rate put into effect by the Companies for these men January 1st, 1922, is \$2.44 per day. Mr. McLachlan estimates these men will not work in excess of 290 days per year and then proceeds to show how the annual earnings of \$707.60 would be used to provide for a family of five.

\$481.90

Balance for food for 365 days for family of five..... \$225.70

\$225.70 ÷ 365 = 62 cents per day for five persons.
 .62 ÷ 5 = 12.4 cents per day for each person.
 .124 ÷ 3 = 4.10 cents per day for each meal.

Following the budget, Mr. McLachlan filed an exhibit, said to have been taken from page 39, 52nd Annual Report of Prisons and Reformatories in Ontario. It shows the cost of providing fuel, food and clothing per day for each person. He pointed out that for five inmates it cost the City of Toronto \$1.94 per day, \$708.10 per annum, or an amount in excess of what the employees would earn at the rate of \$2.44 per day in 290 days (his estimate of the number of days) the men would work in a calendar year of 365 days. It is perhaps sufficient to say that Toronto is neither the highest nor the lowest on the list of forty-six towns or cities.

CHANGES IN THE COST OF WEEKLY FAMILY BUDGET AND OTHER PARTICULARS CONCERNING RATES AND INCREASES FROM 1905 TO 1921

Year 1900—Cost.....	\$ 5.48

From the year 1905 till May, 1916, there was no general increase in wages.

From the year 1905 till May, 1916, food costs increased 69 per cent.

From the year 1905 till June, 1920, food costs increased 184 per cent.

From the year 1905 till the present wages for contract labour have increased as follows:

Including 65 fatal accidents caused by explosion in No. 12 Mine (Dominion Coal Co.) July 25th, 1917.

In luding 88 fatal accidents caused by explosion in Allan Mine, Acadia Coal Company, Ltd., January 23rd, 1918.

The following statement was read and filed with the Board by Mr. Angus McPhee.

I wish to have a word to say in regard to the situation at Sydney Mines. In order to do

so I will have to go back to the time that the Patterson Board sat in Sydney Mines. The wages of the lower paid men was \$2.80 over ground, and there was an awful difference of rates. We got increased to \$3.68, but the proposed reduction makes surface labor \$2.35, underground \$2.45.

Between all classes of labour, in placing our case before that Board, we tried to get our rates levelled up to that of the men on the south side of Sydney Harbor. The Board did not give us that levelling up. What they gave was a small increase of wages. The miners of Princess Colliery were very low, their tonnage rate was about 80c. The Board gave them an increase, and with the increase of the Montreal Agreement, brought them up to \$1.15, and the reduction put into effect by the Company would bring them down to 79c. or the average below \$4.29 a day. The pick miners' wages in the Florence Colliery on the same seam was \$1.05. With the cut in wages of all the rates that I present to your Board, you can realize the hardship the mine workers in the District of Sydney Mines will be up against.

In the Jubilee and Princess Collieries, the contract men in these mines got no increase of wages, but come under the proposed reduction. The reason given by the Company at that time was the low production per man. The production cited by the Company was 0.96 tons per man per day. The Board recommended that as output increased, Companies' officials meet representatives of the men and make adjustments until Sydney Mines' rates were equal to others. The production per man in Sydney Mines is nearly two tons per man at the present time.

I also want to bring to your attention the housing conditions. I would like to refer you to the Royal Commission's report on them, and there are other conditions I would like to inform you about. The lights in the Florence mine are very bad; the men desire to get a new and modern electric lamp. Further, the walk to the coal face in this mine absorbs about one hour or more of the men's time going to the working face, and I would ask your Board to recommend that riding rakes be installed.

The following statement was read and filed with the Board by Mr. F. P. Hanaway:

Mr. Chairman and gentlemen of the Board: Inasmuch as prices of coal and cost of production relative to mining in the United States have entered into the controversy existing in District 26 of Canada between the representatives of the miners and the operators' representatives herein I desire to submit for your information and consideration some of the reduced rates now being paid in the non-union fields of the United States.

COKE REGION U. S. STEEL.

Some of the statements made by Mr. McDougall relative to competition from U. S. coal in the Montreal market should be taken

as inaccurate by this Board until such time as he can show the existing freight rates to the Canadian border from the large producing fields that he has in mind. The largest non-union district in the United States is located in Fayette, County Pennsylvania, where there are employed approximately 40,000 men in and around the mines. The operations are owned by the U. S. Steel Co. and most all coal mined is converted into coke, the freight rates from this field to any point in Canada would be so great, added to the cost of production and cost of conversion into coke, that its cost to the consumer would be so high that its use would be prohibitive. Hence the production of either coal or coke within the Dominion would have nothing to fear from a competitive standpoint. I desire to say in connection with this matter that the percentage of operating time of this particular company during 1921, does not approximate more than 50 to 55 per cent. The statement of Mr. McDougall notwithstanding, I have the scale of wages paid to its employees by this same Company which I will submit to this Board in connection with this statement.

WESTMORELAND COUNTY.

There are approximately 18,000 or 20,000 men employed in this county, none of whom belong to the miners' organization. The production from this field properly goes to Philadelphia, New York and other eastern coal consuming cities on the Atlantic seaboard, and the cost of transportation into your Canadian markets added to the cost of production and conversion to coke render such a condition unlikely as a considerable tonnage in this field is converted into coke, the balance being mostly used for gas making and by-product purposes. I also desire to submit the scale of prices as paid in this field for your consideration.

EASTERN KENTUCKY AND TENNESSEE NON-UNION FIELDS.

The number of men employed in and around the mines in these fields approximate 25,000 men and have been repeatedly reduced to a point that the operator in this territory admits that the prices paid will not permit the miner more than a bare existence by working nine hours per day. These fields are so remote from your Canadian markets that it takes a wonderful stretch of imagination to even think of their competing at all.

The infamous Logan County field, without any comment I submit the scale of prices paid in that field, along with prices paid in Eastern Kentucky.

I desire to draw the attention of this Board to the fact that prices paid for labour and tonnage rates in these coal fields are entirely arbitrary, and the miner or labourer does not have any say as to prices or working condi-

tions that he has to labour under. You will note that the prices paid in the first two districts mentioned after two reductions are nearly as high as the peak prices for day labour in District No. 26 and the rates now being paid in Kentucky and Tennessee and even Logan County, W. Virginia, are much in excess of the proposed reduced rates as offered by the coal corporation of District No. 26. I will leave this matter to the judgment of your Board as to the justice of such a backward and reactionary proposition.

CONCLUSION.

I desire to say that the reasons given for the proposed reduction by representatives of the companies are as follows: First, a reduction in the cost of living has taken place. Second, cheap coal imported from the United States. Third, the necessity of paying profits to the stockholders who hold stocks in the so-called corporation. To the first reason we have never been satisfied with a mere existence as the result of our labour, such as is implied by the companies as stating that wages should come down for the reason that living costs have declined. The aim and desire of the men is not a mere sustenance level or to meet a family budget that does not take into consideration the saving of a sufficient amount from his earnings that will provide for him and his wife in the evening of their lives. The miner and his family are entitled to some happiness and some pleasure in life and are worthy of something more than enough food to produce profits for those who do not toil. We contend that the happiness and welfare of the men, women, and children of this great Province are or should be of more concern to this Board than the payment of dividends to shareholders in any industrial concern, and we also believe that if the time does ever come when the prosperity of the miner or the security of industrial enterprise is jeopardized by cheap commodities imported from the United States, then it will become the duty of the citizens to see that the Federal Parliament protect both the worker and the industry. We believe that we have shown good reasons to this Board why the wages of the miner should at this time remain as they are. To reduce the wages of the miner at this time means that every other craft will have to suffer a like reduction in wages, which will, without doubt, decrease the purchasing power of the man and woman who toils, thereby reflecting its baneful influence on every man and woman in the Province, as it is a well-known historical fact that a nation whose toilers are not prosperous and reasonably contented is indeed poor. We hope that this Board will weigh well these matters as the whole question at issue is, shall the worker be consigned to a bare sustenance,

a mere existence, not more than two weeks from hunger and starvation; or shall the profits of this Corporation be guaranteed in order that some shall live in ease and comfort through profits realized from an industry that they have at no time been a factor in its productivity.

Statement filed by Mr. W. P. Delaney on behalf of the Employees.

The question which I wish to raise this morning is in reference to certain employees being excluded from future contracts. This I understand applies to men employed at machine shop, section men, power house employees. Mr. McDougall on being questioned stated that power house employees at different collieries would not be affected but thought the exclusion would apply to the central power house at New Aberdeen. I wish to state that these men were always included in our negotiations with the Company and we feel that although the number of men affected would not exceed 300 we feel that it is taking a right from these men which they have always had.

The statement was submitted by representatives of Dominion Coal Company that the men employed at machine shop at Glace Bay and section men on the S. & L. Railway were granted the McAdoo Award when the increase under the McKinnon Award were being granted. I wish to point out that this statement is misleading. During the negotiations which went on at that time the representatives of the Dominion Coal Co., met ourselves and a committee from the Glace Bay machine shop employees and section men, the argument was put forth that the rates granted under the McAdoo Award should apply to the Glace Bay shop and the S. & L. Railway section men, which if granted would have meant retroactive money to these men in some cases to the extent of upwards of \$200. The officials of the Dominion Coal Co. refused to agree to any such proposition but stated that they were willing to sit down and negotiate rates for these employees as was the case when negotiating at the collieries. This was done and after considerable time rates were agreed to which were afterwards accepted by the employees. The men did not get the McAdoo rates, but the argument is put forth by the D. C. Company officials that on account of these men getting the McAdoo Award they should be excluded from the miners' future contracts.

Mr. Baxter in his remarks a day or two ago referred to the loss in wages to the employees of the companies involved. Mr. Baxter estimated 6,000 employees at \$1.50 per day reduction. Although the loss of \$1.50 per day to each employee is a conservative estimate, the number of employees is

far too low. A conservative estimate of the three companies involved in this dispute would be approximately 9,500 employees. Basing the average working month for 1922 at 20 days, which we think at the present would be a fair estimate, it would entail a loss to the workmen for 1922 of \$3,420,000.

One item which has not been taken into consideration at the present time in regard to the cost of production is the large amount of construction work which is going on today at some of the collieries of the Dominion Coal Company. This work which consists of extraordinary repairs to deeps and air courses is largely responsible for the high cost of production for this Company. This work although necessary has had this effect owing to the fact that there is no output of coal from these places; consequently the work can be considered a dead loss.

In reference to the banking of coal we feel that the Company would not be able to bank any more than one-third of its output. The Company are today working what they term live mines and the output from these mines is being shipped. If as the Company states the selling price for coal banked depends entirely upon prices to be obtained six months hence, then we submit that this would only apply to one-third of the output, and does not justify the sweeping reduction which has been put into effect.

Mr. D. H. McDougall read a prepared Statement, and then filed it with the Board. Below is the Statement in part.

STUDY OF THE REASONS COMPELLING THE DOMINION COAL COMPANY TO REDUCE THE SCALE OF WAGES TO MINE EMPLOYEES UPON THE EXPIRATION OF THE MONTREAL AGREEMENT.

The situation of the Dominion Coal Company must be considered under two heads, namely:

- a. Temporary and world-wide trade conditions, arising out of the war.
- b. Permanent and local conditions inherent in the situation of the Company's collieries and markets.

Temporary and world-wide conditions which made it possible to pay the wages called for by the Montreal Agreement, and which now require a reduction in wages, are as follows:—

Conditions Making High Wage Rates Possible.

- a. The rise in commodity prices (or decreased purchasing value of money) necessitating larger expenditures for goods of all kinds, when compared with pre-war prices.

This is usually referred to as "inflation" and it is necessarily accompanied by increased cost of living and higher rates of wages.

- b. Higher selling prices for coal, the commodity which the Company produces and sells, and out of which it pays wages.
- c. Decrease in the coal production of the world, due to army drafts; opening up the European market to Nova Scotia, at good prices, for the first time.
- d. Heavy demand for steel goods, taking a large proportion of the Company's coal output for steel-making purposes.
- e. Unusual demand for steamship's bunkers at Nova Scotia ports, and supplying of cargo coal to vessels calling at these ports.

Conditions now requiring Reduction of Wage Rates.

- a. The fall in commodity prices (or increased purchasing power of money) enabling the purchase of all classes of goods and smaller expenditures of money when compared with war-time prices.

This is the process of "deflation" and it is accompanied by decreased cost of living, requiring and permitting only lower rates of wages.

- b. Constant lowering of the selling prices of coal, which, being a commodity, must follow the general trend.
- c. Increase in the coal production of the world, caused by industrial restoration in Europe, closing this market to Nova Scotia coal, at our present cost of coal mining.
- d. Entire lack of demand for steel goods, reducing greatly the proportion of coal used in steel-making.
- e. Decreased call for ship's bunkers at Nova Scotian ports and entire cancellation of cargo business at these ports.
- f. Increased pressure of United States competition in the whole of Eastern Canada, due to excess of coal supply over demand in the United States.

The permanent and local conditions in the coal industry in Nova Scotia have always been recognized as very difficult, and as not permitting competition with United States coal without protection by customs import duties, and the payment of a lower scale of wages than that of competitive coal fields in the United States.

This permanent limitation of the Nova Scotia field was recognized by the International officers of the United Mine Workers in the negotiations which led to the ex-

tension of the organization into Nova Scotia, who so assured the coal companies at a joint meeting held in the Windsor Hotel, Montreal, 14th January, 1919, attended by representatives of the Department of Labour, the coal operators of Nova Scotia, the Executive of the Amalgamated Mine Workers of Nova Scotia, International officers of the United Mine Workers of America, and the Fuel Controller; a sub-Committee brought in the following terms of understanding on which the United Mine Workers extended its jurisdiction to Nova Scotia;

After having had the assurance of the Executive of the Amalgamated Mine Workers of Nova Scotia, and the Representatives of the American Federation of Labour, confirming the statements made in Montreal by Mr. Harlin of the United Mine Workers—

That the desire of the Amalgamated Mine Workers of Nova Scotia, to have the United Mine Workers of America extend its jurisdiction to Nova Scotia, does not arise from any intention to make the wage rates and working conditions of Nova Scotia conform to those obtaining in the other districts of the United Mine Workers of America.

That the local districts will receive complete autonomy.

That the limitations of Nova Scotia in regard to outside competition in the sale of coal are recognized by the incoming United Mine Workers of America, and will always be borne in mind in the future.

The operators agree to the proposed extension of the United Mine Workers of America into Nova Scotia if that should be the wish of the majority of the mine workers.

All subsequent negotiations and contracts have been made upon this original understanding.

This limitation of the competitive ability of the Nova Scotia coal industry consists in the ability of the coal operators of the United States to mine coal at a cost which is very much lower than is possible in Nova Scotia, said ability arising from more favourable physical conditions of mining. There is no method by which this superiority of the United States coal operator can be overcome, and Nova Scotia's disability in this respect must and has been generally recognized.

The pressure of American competition in coal was never more serious than at this time, because United States coal mines were never so highly developed for output as they are now.

In recent years in addition to the temporary world-wide conditions of money inflation, previously referred to, the producer of coal in Nova Scotia has had the benefit of certain

temporary conditions that have tended to increase the cost of imported coal, and to afford additional protection to Nova Scotia coal, over and above the usual customs duty, namely: high freight rates and exchanges losses.

This additional protection has consisted of the following factors:—

- a. High freight rates to the U. S. border.
- b. Premium on New York funds, ranging around 12 to 15 per cent, which has to be paid on the pit mouth price of the coal, plus the freight rate to the border.
- c. Maximum wages paid to mine workers in the United States.

All these conditions have undergone or are about to undergo drastic changes in a downward direction.

Since the middle of the summer of 1921 exchange has dropped as low as 8 per cent, and its tendency is certainly downwards on the long swing.

A reduction of ten per cent on farm product freights was announced in November by the railways of the United States.

Reduction in miners' wages have been general in the United States in non-union fields, and average at the end of October not less than 30 per cent. Outside the Central Competitive District miners' wages have returned to the standards of 1917, for the most part.

With the exception of the autumn and winter of 1918, records show that at no subsequent or previous time has there been such a large stock of coal on hand at this time of the year. Accompanying this unprecedented condition of large stocks of coal on hand, is an abnormally low rate of consumption.

Spot-mine prices range from \$1.50 to \$2.00 for run-of-mine coal.

A substantial reduction in the rate of mine-workers' wages is expected to follow the expiry of the current wages agreement with the United Mine Workers at the end of March, 1922.

The effect of this combination of factors upon the Montreal market will be to reduce the selling price of coal by from \$1.50 to \$2.00 per ton from the prices current in the autumn of 1921. This reduction of selling price in Montreal will, of course, cause an identical loss of revenue at the pit mouth in Nova Scotia.

The lack of demand for coal and the Company's inability to sell coal in face of competition from the United States coal fields can be gauged from the following figures which show a steady decline in sales month by month during this year, a condition of affairs which is caused by heavy importations of coal from across the border, sold at a price the Dominion Coal Company cannot compete with because of high costs of production in its mines.

Scales of
Dominion Coal
in 1921

June.....	318,740 tons
July.....	301,890 "
August.....	237,791 "
September.....	184,290 "
October.....	147,755 "
November.....	96,000 "

The Company's inability to make coal sales arises from inability to meet American prices, by reason of the high cost of production. The attached letter from a former Montreal customer is the best explanation of the Company's situation.

The Canada Sugar Refining Company, Limited.

Montreal, 14th November, 1921.

Alexander Dick, Esq.,
General Sales Agent,
Dominion Coal Co., Limited,
112 St. James St., Montreal.

Dear Sir:

As you are aware, since the year 1916—that is to say—for a period of five years, we have not been able to do business with your company, as we had done for so many years in the past; this was not on account of anything except the one question of price, as we strongly prefer to deal with Canadian concerns, in purchasing our supplies, in every case where it is possible.

During those years the price of Cape Breton coal has been at a point where it has not been possible for us to give them orders.

I am most anxious to renew our business dealings with you, and it is for your company to reduce your costs, and your profits, if necessary, to a point where you can compete in price with American coal.

As you are aware, the price of American coal has been lowered, very materially, during the present year, and I think there is not the slightest doubt that next year will see it still further reduced, as both wages and freight rates, which are the main factors affecting it, will undoubtedly come down.

I am writing you this letter, not as much as a coal buyer, individually, as through my interest in the use of Canadian materials in place of American, and the consequent rectification of the enormous discount on Canadian currency, as compared with American. The discount of the Canadian dollar makes it necessary for us to pay whatever the current rate of exchange may be, on every pound of sugar, which we import. This adds very materially to the cost of our product in the Canadian market.

One of the contributing factors to the premium on American funds is undoubtedly, the large importations of American coal, which could just as well be mined in Canada, with the accruing benefits to the Canadian miner, which at present, are being handed over to his American competitor.

It should be plain to every miner in this country that every ton of coal bought in the United States, which might have been bought in Canada, is a direct loss of the cost of the coal (to which must be added the indirect loss in the premium on exchange which it tends to augment). That American coal should be transported hundreds of miles by rail to a Virginian port, and thence by steamer to Montreal passing Cape Breton en route, should be an object lesson to you and your employees, which needs no comment from me.

Yours very truly,

(Sgd.) H. R. DRUMMOND,
President.

The importation of United States coal into Canada during 1921 has been for the nine months ending September as follows. The steady decline in the selling price (or declared value at the border) is very noticeable.

Month of 1921	Bituminous imports	Tons value in dollars	Value per ton
January.....	1,637,364	\$7,578,075	\$4.62
February.....	1,148,631	4,751,700	4.13
March.....	1,401,431	5,594,923	3.99
April.....	696,017	2,406,750	3.44
May.....	756,064	2,540,662	3.35
June.....	1,064,668	3,694,226	3.47
July.....	1,246,971	4,442,698	3.56
August.....	1,293,555	4,155,432	3.20
September....	1,302,200	3,715,473	2.86
	10,551,901	\$38,879,939	\$3.72

A drop of \$1.50 per ton in the selling price of coal during the first nine months of 1921 is indicated by these figures, but during the period from October 1st to date the drop has been still more severe. The selling prices of the Dominion Coal Company must conform to these lower levels, if sales are to be made.

For the first half of 1921 the import of American bituminous coal into Eastern Canada compares with two previous years as follows:—

Imports of U. S. coal Maritime Provinces and Quebec during first half of:	Short tons
1921.....	1,403,724
1920.....	782,774
1919.....	1,058,594

During the second half of the year coal has been imported into Quebec at a rate greater than during the first half of 1921 and sales of U. S. coal have been made at ports in the Maritime Provinces, such as St. John, N.B., and Chatham, N.B., which were regarded as an inassailable market for Nova Scotia coal.

INCREASES IN WAGES.

Increases in wages during the period of rising prices asked by the workman, and granted by the company, were as follows:

Date of increase	Increase over previous rates	Cumulative increase over rates of 1916
1st June, 1916.....	6%	6%
1st November, 1916..	15.9%	22.9%
1st May, 1917.....	14.2%	40.6%
1st June, 1918.....	16.0%	63.1%
1st July, 1918.....	5.1%	80.0%
January, 1920.....	9.0%	96.2%
1st November, 1920..	12.5%	120.7%

Individual rate increases have exceeded the figures above given.

The average daily earnings of all classes of workmen at the Dominion Collieries have risen as follows:—

Year	Surfacemen	Underground labour	Mining coal	Total average
1914	1.87	2.07.....	3.06	2.46
1915	1.95	2.05.....	3.01	2.48
1916	2.06	2.17.....	3.30	2.64
1917	2.62	2.80.....	4.21	3.35
1918	3.32	3.64.....	5.39	4.25
1919	3.48	3.79.....	5.65	4.42
1920	4.00	4.41.....	6.55	5.02
Sept., 1921	4.47	5.00.....	7.22	5.73

These figures indicate increases over 1914 rates as follows:—

Surfacemen.....	140 per cent
Underground labour.....	145 “
Mining coal.....	136 “

The actual individual annual earnings were greatly in excess of this amount.

The difficulty of the Company's position is apparent when it is stated that with an output reduced by 34 per cent and its productive employees reduced by 33 per cent (the figures being,

of course, virtually the same) it has been necessary to carry on the payroll a force of non-productive employees whose numbers declined only by 6 per cent and rate of wages was increased by over 140 per cent.

The effect of lower outputs, lessened individual productivity and increases in the rate of wages has been to increase the labour cost of production of a ton of coal since 1915 by approximately 200 per cent.

It has been possible to pay such additions to the payrolls only by passing along the cost to the consumer, but this is no longer possible.

APPENDIX “A”

Memorandum on St. Lawrence Market comparing 1921 with that expected in 1922, as read and filed with the Board by Mr. D. H. McDougall.

During the years 1912 to 1914, the Montreal market had been developed by the Dominion Coal Company to sales of almost 2,000,000 tons per year.

The sales from 1912 to 1915 were as follows:

Year	Quantity (long tons)	Per cent of the total disposals of the company
1912.....	1,713,287	38%
1913.....	1,825,682	39%
1914.....	1,973,422	45%
1915.....	1,500,323	32½%

During the 1921 season, the Dominion Coal Company has succeeded in partially regaining the Montreal market, and shipped 865,000 tons, which does not represent anything like the quantity of coal that could have been supplied to the Montreal market from the Company's collieries had it been possible to effect a greater quantity of sales in the Montreal market.

As to the existence of a market for bituminous coal in Quebec, there is no question, as at the close of the year 1921 approximately 3,000,000 tons of bituminous coal from the United States will have been imported into the Province of Quebec. When normal trade conditions are restored and the present abnormally small consumption of coal in industry has been replaced by a normal rate of consumption, it will probably be found that the consumption of the province has been much increased during the past seven years and it would not be surprising to know that the normal usage of bituminous coal in the province was in the vicinity of 4,000,000 tons annually.

A fair presumption, therefore, is that if the Dominion Coal Company can offer coal at a price which will meet American competition, the possible sales of Dominion Coal in the Province of Quebec would be sufficient to keep its mines fully occupied when added to other customary sales.

The competitive delivered price of American coal at Montreal during the late summer of 1921 was about \$7.65 or \$7.75. At the end of the year coal was offered as low as \$7.15 to \$7.25. It is anticipated that the price for the summer of 1922 will be from \$5.75 to \$6.25.

Actually coal has been sold to customers in Montreal at prices higher than exact competition with American prices would call for, and this has been possible because Nova Scotia coal is preferred by Quebec users for its quality and because Canadian consumers desire to have Canadian mined coal where it is possible without direct financial loss to themselves.

The railway price has been keener because of the ability of the railways to buy and to store coal in larger quantities, and it is expected that the price which will be obtainable in the Montreal market for the Company's product in the summer of 1922 will be from \$1.20 to \$1.50 per ton less than the price of 1921.

APPENDIX "B"

Memorandum of the Bituminous Coal Trade of the United States, and the conditions which give rise to intermittency of employment among the mine workers, as read and filed with the Board by Mr. D. H. McDougall.

The high wage rate paid to miners in the United States has come about very largely through the necessity to compensate for intermittency of employment. This condition is one that is notorious and admitted in connection with bituminous coal mining in the United States and has been made the subject of investigation by the United States Geological Survey.

In a memorandum prepared by the request of Senator Frelinghuysen on "Seasonal Fluctuations in the production and Transportation of Bituminous Coal" it is stated that during the thirty years between 1890 to 1919, the bituminous mines worked an average of only 215 days per year, losing on the average 93 possible working days in each year. The cause of this part time employment and their proportionate effect are stated in this memorandum to be as follows:-

Reasons for idleness of coal mines	Average days lost per year 1890 to 1919
Business depression.....	15 days
Sheer over-development.....	34 "
Seasonal slackness of demand	44 "
	93 "
Possible working days.....	308 "
Actual average worked.....	215 "

The State of Illinois is typical in this connection, and following is a table showing the average daily operations per year in the shipping mines of Illinois covering the period from 1906 to 1921:

Year	Average days per year
1906.....	189
1907.....	209
1908.....	191
1909.....	189
1910.....	179
1911.....	184
1912.....	176
1913.....	179
1914.....	174
1915.....	172
1916.....	185
1917.....	215
1918.....	230
1919.....	192
1920.....	176
1921.....	174

In the State of Ohio, the mines in the southern part of the State have been worked during 1921 not more than 25 per cent of full time. In the eastern part of this State where more favourable conditions exist, about 50 per cent of full time has been worked.

The reports of the Geological Survey show that the bituminous coal production of 1921 has so far proceeded at a rate which is not only below the high average of the years 1917 to 1920, but is below the figures of the period 1913 to 1916.

So far the year 1921 in point of bituminous production is 47,000,000 tons behind 1919 119,000,000 tons below 1920, and 141,000,000 tons below the high average of the War years. Indications are, that it may be necessary to go back to 1905 to find a bituminous coal production as low as that of 1921.

In the Weekly Report of the Geological Survey of September 17, it is stated that 970 bituminous coal mines out of a total of 2,697 mines were entirely closed down. Only 180 mines out of the total are reported as working full time. The bituminous coal mines of the United States are not working at a rate greater than from 50 to 60 per cent of their rated capacity.

The depression in demand affects chiefly the Union Mines in the Central Competitive Field, and while these are reported as working only from 25 to 50 per cent of capacity (where not entirely closed down) the mines in the non-union fields are working from 90 to 100 per cent full time, a condition that is chiefly attributed to the difference in the wage scales of the union and non-union districts.

The absence of demand for bituminous coal is reflected in the low selling prices. In August and September, 1920, current spot prices of soft coal passed \$9.00 per ton, and this has continuously and rapidly declined until in November, 1921, spot-mine prices ranged from \$1.50 to \$2.00 per ton for good quality of run-of-mine coal.

GENERAL CONCLUSIONS.

The ability of the Dominion Coal Company to pay wages depends upon its ability to sell coal.

Coal cannot be mined and sold at a profit at prices prevailing and likely to prevail in 1922, because of the following conditions:

Selling price of coal—

During 1922 the Company anticipates that coal prices will be less than the prices of the early summer of 1921 by..... 30 per cent
and less than the prices obtainable when the Montreal Agreement was made by..... 50 per cent

Cost of production—

By reason of higher wages, higher costs of mine supplies, increased taxation by federal and provincial government and workmen's compensation, by reason of a lowering of output by 30 per cent, by disproportion of non-producers employed and smaller number of miners, reducing efficiency, the cost of producing coal has risen when compared with 1914, by..... 224 per cent

Earnings of the mine workers—

Earnings of the employees at the coal mines are from 120 to 200 per cent greater than the rates of 1914, and may be fairly averaged at an increase of..... 140 per cent

Expenses of the individual—

The cost of living at the mines in Nova Scotia is between 50 and 60 per cent above the costs of 1914 and may be fairly averaged at..... 50 per cent

Statement filed by Mr. D. H. McDougall on behalf of the Companies:

WHAT IS THE CASE OF THE UNITED MINE WORKERS?

That we are asking reduction in wages, not because of trade conditions but to pay dividends on stock.

That our contentions as to freight rates, delivered prices in Montreal, competition with our coal in the Maritime Provinces at this time, are unproven and in the nature of guess work.

WHAT IS THE COMPANY'S CASE?

We have established the following conditions:—

Wages increased 140 per cent.

These wages paid during a year of constantly falling selling prices of coal and could not have been paid but for the accident of the English coal strike—notwithstanding our earnest desire to keep faith with the men under the contract.

Increase in wages given under the Montreal Agreement was paid to meet the increase in commodity prices at that time. Commodity prices have decreased without let-up ever since.

The Company takes its stand on the Memorandum of Reasons submitted to the Board and is prepared to prove conclusively every statement therein. None of them have been disproved. We rest our case on the facts as presented.

The Company is unfortunate in having been the first large unionized coal mining company to be compelled to put into effect a wage reduction following the expiry of a contract. If the contract had expired at a later date it would have coincided with or followed the general reduction in all coal-mining wages in North America. We have advices from an undoubted source that a 30 per cent reduction is to be put into effect by the coal operators of Illinois on the expiration of the present contract and that notices are shortly to be posted in the Pittsburg district of a 40 per cent reduction effective 1st April.

Secretary of Commerce Hoover's recent statement indicates heavy contemplated reductions. In the United States coal has fallen to a price approximating that of 1914, and the protection afforded to Canadian producers by the exchange rate is practically gone.

The figures shown by Mr. Caye of the Grand Trunk in his evidence before the Fuel Committee indicate, when compared with present prices, that coal is now selling at \$1.38 below the price of last spring and further declines are inevitable.

In the face of a probable further fall in coal prices our balance sheets in the months of October, November and December showed a series of losses greater month by month.

All commodities are falling in price. How can the price of coal be maintained in Canada against competition from the United States when it is proved that this country our chief competitor, has developed its mines 40 per cent in excess of the maximum requirements of the United States in the war period?

British coal has now also become an active competitor of our coals at our very doors and the tremendous reductions in wages of the British coal miners are notorious.

We state that the Maritime Provinces cannot afford a sufficient outlet for the production of our coal mines unless we can get back the Montreal market. Unless we do this neither the Company nor the men can continue in their present occupations.

Statement filed by M. A. McColl on behalf of the Companies.

Mr. Livingstone has referred to the desirability of the Province taking over the coal areas and operating them as a government proposition.

In this connection, Sir, I would like to point out to you that the Nova Scotia Steel and Coal Company, as already set out, in order to secure for themselves a coal mining property for the purpose of making use of the ore in our Wabana field, purchased in 1900 the mines and property of the General Mining Association. At this time they paid for the property \$1,500,000 and borrowed the money at 5 per cent. The interest on the same for twenty years would amount to \$1,500,000 additional or \$3,000,000. They have expended in development and operations \$4,500,000 additional.

The total receipts from the coal mined in excess of the actual amount paid out for wages and material amount to \$3,000,000, so that after twenty years' operation the company has extracted over 12,000,000 tons of its cheapest and most available coal and ores, on account of its investment \$4,500,000.

The coal used for steel making purposes was in the earlier years charged at a price somewhat higher than could be obtained for this waste, slack product in the open market, and for the past six years it has been charged at the actual cost of production of run-of-mine coal—in some cases as high as \$7 a ton, so that you will see from this that the steel plant has not been favoured at the expense of the Coal Company.

The common shareholders of the Acadia Coal Company (of which I am the General Manager) had in 1909 in their treasury the accumulated profits for a number of years during which they had paid no dividends and which amounted to \$750,000. As their collieries were becoming depleted they considered it advisable to make a large expenditure for the purpose of opening and equipping new collieries. With this in view they borrowed \$2,000,000 at 6 per cent interest. Since that time no dividends have been paid to the shareholders as of that date; the interest only has been paid on the borrowed money, and the company now owes the Bank \$400,000. In other words, Mr. Chairman, so far as the original shareholders are concerned, they would have been very much better off had they divided the \$750,000 between them twelve years ago and given the property away.

In regard to the contention that the Company is asking its workmen to accept a wage out of all consideration for living conditions, we might point out that on the 1st of February, 1921, a reduction went into effect at the steel plant at Sydney—where the men work almost next door to those same coal mining operatives. In order to produce steel at prices that would enable the Company to get orders, a common labour rate of \$2.80 for a ten-hour day was agreed upon at that date. That rate has since been reduced to \$2.50 for a ten-hour day. The same rate was also

paid at the Steel Works at Trenton, and in both cases these employees, for the sake of endeavoring to help save the industry, were willing to accept the wages named rather than go entirely without employment.

We might point out further that in the lumbering industry of the Province the wage of \$60 monthly paid to woodsmen a little over a year ago has been reduced to from \$20 to \$30.

Mr. McLachlan speaks as though this was an unheard of rate and unworthy of any consideration. I would point out to you, Sir, on the other hand, that \$2.50 per day of 10 hours—or 25c an hour—is the regular rate for common labour in the Province of Nova Scotia since last July. Were I to make invidious distinctions and bring up an unfair comparison, I might state that the rates paid in some of the municipalities during the summer, fall and up to the present time are 15c per hour to common labour engaged in municipal work.

Statement filed by Mr. A. McColl on behalf of the Companies.

Previous to 1893, the coal areas on the south side of Sydney Harbor were owned and operated by a number of small competing companies. None of them had any considerable resources or surplus of capital for further development. The outputs were limited and while a large proportion of the product found a market in the Maritime provinces and Newfoundland, the surplus had to be disposed of on the St. Lawrence. Owing to competition with American coal as well as among the companies themselves, the marketing of their product in the St. Lawrence was most irregular and led to continual irregularity of work not only during the closed season of navigation but throughout the entire year. In 1893 these properties were consolidated by the formation of the Dominion Coal Company Limited. This company not only brought in a very large amount of additional capital for the necessary development of the mines, but proceeded at once to build a railway from Sydney to Louisburg and erected at that port a large coal shipping pier so that it would be in a position to ship coal all the year round. At its inception the promoters of the Company expected to find a large market in the New England States but in this regard they were disappointed as they found it impossible to compete with American coal brought by water from Newport News. They therefore turned to further extensions of the St. Lawrence trade, and as this business was only available during the summer months they found it would be necessary for the satisfactory operation of the collieries that large quantities of coal should be banked during the winter. Previous to the consolidation the companies had banked small quantities of coal but found the process exceedingly expensive on account of the large amount of slack coal produced for which no market could be found, and this condition became accentuated under the extended operations of the Dominion Coal Company. The discovery

and development of the Newfoundland iron ores two years after the formation of the Coal Company offered an outlet for a large quantity of surplus slack if it could be proved satisfactory for steel making purposes. An exhaustive test of this coal was made at the blast furnace of the Nova Scotia Steel and Coal Company at Ferrona, and the results proved so satisfactory that a new company was formed, namely, the Dominion Iron and Steel Company, which purchased a part of the iron areas owned by the Scotia Company and proceeded at once to erect extensive works on the shores of Sydney Harbor. Having therefore satisfactorily disposed of its slack coal, which in many cases had been used by the former companies for ballasting railway tracks and sidings, and, in fact, frequently had to be dumped in the most accessible points, the Company proceeded to develop to its utmost the large and increasing market in the Quebec and Montreal districts. This made necessary large expenditures for storage space and discharging facilities at both these points as the company had to be prepared to supply its customers with coal in winter as well as during the summer season. So successful was the policy adopted that in 1914 the total shipments to the St. Lawrence were two million tons or more than two and a quarter times the total output in 1893, while at the same time there was found in the steel plant a regular customer for nearly a million tons of slack coal with consequent steady work to the men employed in the collieries.

The Nova Scotia Steel and Coal Company, which originated in 1874 in a small blacksmith shop in the town of New Glasgow, Nova Scotia, extended gradually until in 1901 with a small blast furnace and steel plant at Ferrona and Trenton, by the purchase and development of Wabana Mines it found itself the owner of one of the largest iron ore deposits in the North American continent. Up to 1898 all the coal used by the company had been purchased from the various collieries on the mainland of Nova Scotia, but in that year a test made of Cape Breton coal proved that for the working of the Wabana ore the Cape Breton coals were, on account of their lower ash content, more suitable for steel making than the coals of Pictou or Cumberland counties. The company had also decided that it could not successfully operate unless it had a coal mine of its own, and as satisfactory arrangements for a consolidation could not be made with the Dominion Coal Company, it was decided advisable to sell a portion of the ore areas and purchase the property of the General Mining Association at Sydney Mines. Here were erected a blast furnace and open hearth steel plant, new mines were opened up and the output of coal increased from 225,000 to 900,000 tons annually. On this side of the harbour the seams are much thinner than on the south side operated by the Dominion Coal Company. The operations at Sydney Mines are much older and further extended than at Glace Bay. They have been, ever since taken over by the Scotia Company almost entirely submarine and for those reasons as well owing to the thinner seams are probably the most expensive collieries

to operate in North America. It can therefore be easily seen that if the company wishes to sell its coal in competition with other mines it must have some advantage in the rates paid to employees, and there has always been agreement and co-operation in this regard. It is true a new colliery was recently opened in this district when the demand was abnormal, but owing to the poor quality of the coal the operation is but seasonal and the cost the year through does not differ appreciably from that of the other mines of the company. While it is true that, as pointed out by Mr. McPhee, there has been a marked improvement in the tons mined per man over former practice, we would like to point out that the production is still one ton per man per day below that of the mines on the other side of the Harbour.

The outbreak of the war, with the curtailed output caused by the enlistments of men from the working faces, the requisitioning by the British Government of steamers chartered by the company and the excessive increase in the cost of steamer tonnage, brought about conditions under which it became practically impossible for the companies to send coal to Montreal. On the other hand, the general demand for coal for other purposes gave a new market during the war for all coal that could be produced. The declaration of peace, while it at once brought to an end the demand for many commodities and a consequent depression in the industries producing them, only for a few weeks affected the coal industry of Nova Scotia. The disturbance in that trade caused by the unsettled labour conditions in Great Britain gave an impetus to our local coal trade which extended into the early summer of 1921 and opened temporarily a market in Europe and elsewhere which had not been available before the war. In 1921 every endeavour was made to retain the St. Lawrence market, but it was an uphill fight as most of the former customers had in the interim become purchasers of American coal which gave them good satisfaction and could be very conveniently landed in Montreal by rail or rail and barge. In fact, during the early part of 1921 contracts were made for large quantities of American coal for deliveries all through the year as at that time the Cape Breton companies could not compete with the prices offered except for such quantities as their own steamers could transport, as ocean freight rates were still too high to make new charters on a basis that would enable them to freight the coal to Montreal without a loss. Since the middle of last summer prices of coal may be said to have been not only on the down grade but to use a slang phrase, "on the toboggan." Last July coal was being sold at \$12.00 per ton delivered in Glasgow, Scotland, and at higher prices in ports on the east coast of Europe. Coal was then worth \$7.00 per ton f.o.b. steamer at Newport News, and you can now buy all the American coal you want at \$4.20 f.o.b. Newport News. Only last week 20,000 tons of British coal was sold to the Swedish railways at \$4.75 a ton delivered in Swedish ports. As already stated, there is a market in the St.

Lawrence for 3,000,000 tons of bituminous coal. Contracts for part of this coal are now being placed and further contracts will be placed in the near future. To secure this business will mean much lower prices than prevailed last season. If our people are willing to do as the workmen of our competitors have done and accept the reductions proposed, which are nothing like as great as have gone into effect not only in other coalfields but in other industries in Canada, the Company is prepared to immediately proceed to bank as much coal as its facilities will permit, not less than 400,000 tons, which will provide comparatively steady work during the next three months, and all reasonable endeavours will be made to distribute the work over the various collieries. If this reduction in wages cannot be put into effect there is no alternative but to mine only such quantities of coal as can be disposed of without loss.

In the mainland collieries conditions are somewhat different and even more difficult, but we are satisfied that with an improvement in the steel trade, and if we can regain our position in the St. Lawrence (and it must be done this summer if ever), the coal thus disposed of from Cape Breton mines will leave a much larger proportion of local sales available to Acadia and Springhill. In any case, with the reduced costs thus obtained we are satisfied we can prevent the recurrence of the unfortunate incident which occurred last fall when 20,000 tons of American coal were landed in St. John.

Mr. D. H. McDougall read a prepared statement giving what he termed an analysis of chief reasons submitted by United Mine Workers for maintaining old schedules. Below we quote from the statement.

Mr. Baxter referred to the exclusion of certain classes of workmen from future wage agreements at the mines.

It is proposed that the practice in other mining centres be followed, and that only the workmen at the coal mines actually engaged in the mining and handling of coal within the colliery limits shall be included in any future wage schedules.

It is also proposed that all officials of the company, all clerical employees, all men on monthly salary; and specifically, the colliery engineer, assistant colliery engineer, surface foreman, head lampman, head stableman, head carpenter, head blacksmith, head stoker, coal inspectors, examiners, deputy overman and shot firers, foreman pumpman and underground machine boss should be excluded.

Mr. Baxter has stated that the U. M. W. are the successors of the Provincial Workmen's Association in so far as the classes of workmen who are to be its members.

The correspondence at the time that the P. W. A. merged with Amalgamated Mine Workers discloses that the dues were to be collected for the Amalgamated Mine Workers' Association provided they became incorporated as the P. W. A. was. They never became incorporated and this condition not having been fulfilled no agreement was ever come to with the Amalgamated Mine Workers who afterwards became merged in the U. M. W.

With reference to the criticism that there is a differential between the wage schedule of the men at Sydney Mines and at Glace Bay, this differential has always existed, and it has been recognized that the more expensive mining conditions at Sydney Mines are to be taken into consideration in fixing the schedules at these respective places.

Reference has been made to the wages received by shippers.

Prior to the war shippers and trimmers worked on a tonnage basis. During the war when outputs decreased the shippers were put on a weekly wage scale which was continued under the Montreal Agreement. At the expiration of this agreement the shippers were again placed on a tonnage basis. Due consideration was given to the increases on the rates in existence prior to the war and the present rate in effect January 1st is the old rate plus the increases, minus the present decrease in wages.

Mr. McLachlan's address was chiefly directed to two matters:

(1) complaint that under the present schedule common labour was receiving too small a wage;

(2) that the sole purpose of the decrease in wages was to enable dividends to be paid on the stock of the British Empire Steel Corporation.

Previous to the war the common labour rate was 16c per hour; the present rate is 28½c on the surface and 31½c underground. There are 888 men who come within these classes employed by the Dominion Coal Company; of those 736 are not married. Of the married men 37 have sons who live at home and are working.

Much comment was made upon the wages paid between 1905 and 1916. It is unnecessary to deal with these conditions as there have been several Boards since 1916 which passed upon and settled antecedent conditions and it is assumed that this Board will not review what previous Boards have satisfactorily adjusted.

Mr. McLachlan referred to the difference between the wage scales for ordinary labour, in our coal mines and in Western Canada. It may first be pointed out that under the agreements by which the U. M. W. entered Nova Scotia it was expressly understood that the wages and conditions of work were not to conform to other districts in which the U. M. W. was organized. Recent advices are that collieries are being closed in Western Canada and that the men are voluntarily accepting low rates of wages in order that they may secure employment and that the mines

may continue to maintain their old customers pending the advent of better times. Further we have been excluded from shipping coal to the European market by the remarkable fall in wages. In England common labour, is now reduced to \$1.44 from \$1.68 per day and coal from England is now being landed in New York. From three to five thousand tons of English coal have been offered in Halifax this week at rates with which this company cannot compete. At the reduced rates paid labour in England, Welsh coal brought out in grain carrying ships will be a serious competitor of all coals in the St. Lawrence market.

With reference to the second point in Mr. McLachlan's statement, that the sole object in reducing wages was to enable dividends to be paid to the shareholders of the British Empire Steel Corporation, a complete answer is that no dividends have been paid, either on the second preference stock or on the common stock of that company since its organization, and trade conditions are such that the outlook for a dividend in the near future is not promising.

Regarding the wages that this company pays its men, Mr. McLachlan correctly stated, when recommending the Montreal Agreement to the men, the wage scale existing in Nova Scotia and the conditions of the miners. His speech is reported in the Halifax Herald of the 17th November, 1920, as follows:—"Since 1913 and including the proposed agreement, the wages of shift men in the mines of Nova Scotia had increased 145 per cent against 111 per cent in the United States for shift men, and 88 per cent for contract men. The Montreal increase is larger than that received by the British miners who recently returned to work. He declared the miners of Nova Scotia earned higher wages than the miners of the United States."

It may be noted, too, that all Mr. McLachlan's figures in dealing with the profits of the company, and his quotations from the reports of officers of the company are referable to times when trade was good and prices high and he does not attempt to deal with an admittedly falling market and world wide depression, with no encouraging outlook.

The reserve of \$26,000,000 mentioned by Mr. McLachlan is made up of total reserves of the several companies entering the merger and as clearly shown by the individual balance sheets of these companies has been re-invested in plant and equipment.

No fair criticism can or ought to be made against the establishment of the steel plant, particularly by friends of miners. It is submitted to the Board that the reason that induced interests allied with the coal company in 1900 to found the steel industry was because a large part of the product of the mines was then wasted and work frequently curtailed for lack of a market.

The steel plant at Sydney represents a great effort made by the people of Canada to establish a basic industry in Nova Scotia, and during the

war the wisdom of its establishment was fully demonstrated. The coke ovens, blast furnaces, mills and power plants compare favourably with any plant in the world.

The non-operation of the steel plant means restricted and handicapped operations at the coal mines, and much of the present unemployment at the collieries is due to lack of business at the steel works.

It is well known in Nova Scotia that the true reason for the merger was to settle a difficult situation with reference to coal areas in Nova Scotia and ore areas in Newfoundland and owned by competing companies. This has been accomplished.

Memo in reply to statement of Mr. Hanway. Filed by Mr. D. H. McDougall on behalf of the Companies.

OVER-DEVELOPMENT OF THE BITUMINOUS COAL MINES OF THE UNITED STATES.

Our statement that the producing capacity of the bituminous coal mines of the United States was in the vicinity of a billion tons per annum was made on the authority of Mr. John P. White.

A study of the reasons for the irregularity in operation of the bituminous coal industry was prepared by Mr. F. G. Tryon, of the United States Geological Survey, in March, 1921, from which the following statement is extracted:—

"In 1915 the annual capacity of the soft coal mines was about 675,000,000 tons. Today it is certainly 800,000,000 tons and there is evidence pointing to a figure of 900,000,000 tons. . . . The increase has been particularly marked during the last twelve months. It is not due alone to the opening of new wagon mines or the re-opening of old mines long abandoned. It means also a number of large new workings and heavy investments in new development work, new equipment and new mining machines at properties already established."

Mr. Edwin Ludlow, President of the American Institute of Mining Engineers, has recently stated the bituminous coal industry of the United States is developed to produce twice the normal consumption requirements of that country.

DELIVERED PRICES OF UNITED STATES COAL AT MONTREAL.

Replying to Mr. Hanway's statement that coal from Westmoreland County and the coking-coal regions of the neighbourhood of Pittsburg could not be delivered in Montreal except at such high prices as to render them non-competitive with Nova Scotia coal delivered at Montreal, we have under date of December 28th a letter from Messrs. Pilling and Company, the largest

bituminous coal brokers in Philadelphia, offering us coal from the Pittsburg seam such as is ordinarily used for coking purposes and giving 14,300 B.T.U.'s at a price at the mines of \$1.65 per ton, which would cost us delivered at Montreal \$7.03 per ton, including freight, duty and premium on New York funds. We are also offered by these people coal from Indiana County at \$6.95 per ton delivered in Montreal.

WAGE SCALES IN THE UNITED STATES.

The Company has admitted in its memorandum that it cannot hope to pay a scale of wages as high as is paid in the coal fields of the United States, but Mr. Hanway has specifically brought up the fields in Eastern Kentucky and Tennessee, in regard to which we desire to file a copy of the *Coal Trade Bulletin* of January 2nd, 1922, on page 116 of which will be found the report of the arbitrator in the matter of an application of the coal owners in unionized districts in these states for relief from the high scale of wages called for under the Knoxville Agreement.

The arbitrator, in deciding that wages should be reduced to the scale of November, 1917, made the following statement:—

"It is claimed that the miners cannot live under the 1917 wage scale; it has been proved beyond the shadow of a doubt that many thousands of them have been unable to live under the present wage scale because it has made the operation of a large number of the mines impossible, therefore to these the scale has been utterly useless, but that is not all, we are now confronted with the fact that because of the present scale all the railroad mines will be immediately compelled to close unless the present scale is reduced, and the further fact that some thirty mines where some three thousand men are employed are in many instances at the request of the men themselves already working under the 1917 scale."

The common labour rate on the surface under this arbitration award is reduced to \$2.64 per day.

With regard to Mr. Hanway's reference to Logan County and West Virginia coals, we may state that coal from West Virginia, among other coals, is referred to in our memorandum given to the Board as competing at this time directly with our own coal in the Maritime Provinces and the Gulf of St. Lawrence. This coal is hauled by rail to Newport News and is shipped from there by water.

FREIGHT RATES.

With regard to Mr. Hanway's statement that freight rates cannot be reduced before next Autumn, would state that every effort to reduce freight rates on coal and mineral products is being made by the mining bodies in the United States, in support of which might be quoted the

following remarks of Mr. Morrow, Vice-President of the National Coal Association, taken from the New York Times of Friday, the 20th January, namely:—

"While we sincerely desire the financial position of the railways to be preserved," said Mr. Morrow, "we feel that substantial reductions in bituminous coal freight rates are a prerequisite to the industrial and business revival of the United States upon which the prosperity of the carriers, as well as the nation at large, in the last analysis must depend. We feel that a material reduction in these rates would act in some degree as a stimulus to business and, therefore should reduce the operating expenses and tend to increase the revenues of the carrier. The facts which lead us to these conclusions apply with particular force to this basic commodity which enters so fully into the economic and social well-being of the nation. Therefore, if this commission thinks that any rate reductions are warranted, we specifically submit that the heavy nation-wide cuts in the present high bituminous coal freight rates should be the first reductions ordered. . . . The freight rates," Mr. Morrow said, "had advanced from 75 to 200 per cent or more since 1914. The freight charge of \$150 or \$200 on a car of coal which can be bought at the mines for from \$50 to \$100," said Mr. Morrow, shows on its face the disproportion between the transportation cost and the market value of the commodity." Mr. Morrow stated that 49½ per cent of each dollar paid for coal ordered by the manufacturer went to the operator, 40 out of which all his costs must come, while 51½ per cent went to the freight rate of the coal."

COMMENT ON MR. McNEIL'S STATEMENT.

Mr. McNeil, in his remarks, referred to the sworn testimony of Mr. C. W. Caye, Purchasing Agent of the Grand Trunk Railway, before the Parliamentary Committee on the Future Fuel Supply of Canada in April, 1921, and his statement to the effect that American coal could be landed in Montreal at \$7.94. In July of the same year the Grand Trunk Railway placed before the Dominion Coal Company information to the effect that American coal could be landed in Montreal for \$7.38, and a contract was entered into between the Dominion Coal Company and the Grand Trunk Railway for 150,000 tons of coal at that price.

We have revised Mr. Caye's figures to conform to reduced freight rates and lessened amount of exchange at December, 1921; but permitting the price at the mines to remain the same, the total cost landed in Montreal on that basis is \$7.11 per ton as against \$7.94 last spring.

Leaving out for the moment any change in the price at the mines, we have an actual reduction of eighty-three cents per ton as between the date of Mr. Caye's testimony and December, 1921.

If we further revise Mr. Caye's figures and apply the current selling price at the mines of \$1.75 per ton, the price would be \$6.56 per ton landed in Montreal in December, as against \$7.94 last spring.

If we take Mr. Caye's figures and apply our estimate of the conditions expected to govern prices in the spring of 1921, the estimated price at Montreal will be \$5.59.

We note there was handed in by the men's representatives a copy of the Report of the Commission appointed in July, 1920, for the purpose of looking into the mining industry of Nova Scotia. The Commission brought in its findings on the 9th September, 1920.

This report, which was evidently prepared without a complete understanding of the situation, was eventually rejected by both parties concerned and at a later date the operators and men's representatives got together and framed the Montreal Agreement.

We feel that it is not necessary to add at this stage that the report of the Commission was made at a time when great scarcity of coal prevailed in America, in Europe and all over the world, and a time also when the cost of living had just previously reached its highest peak. Conditions which faced the Commission are entirely different from those with which we are now dealing, and their findings—never properly applicable to the situation—clearly should not be considered in view of present conditions.

MEMO ON FAMILY BUDGET.

The Company's employees mostly live in a Company house and water rate is added to the rent.

Figures for rental, light, fuel and water are given in the budget for one year as follows:—

House rent.....	\$100.00
Coal (20 tons).....	65.00
Light.....	25.00
Water.....	6.50
	<hr/>
	\$196.50

Actual average expenditures of workmen for these items in 1921 were as follows:—

House rent.....	\$72.00
Coal (14 tons).....	45.50
Light.....	7.50
Water.....	9.00
	<hr/>
	\$134.00

The Company does not desire, however, to criticize the expenditure, but does oppose the inference that this class of workmen, earning the lowest rate, is representative of the family earnings and expenses of their workmen as a whole.

It is unfair to base the whole plea of the workmen upon an exceptional instance.

The number of men receiving the rate of \$2.44 per day is at the Dominion Mines 788 (the previous figure was overstated by 100 men).

These 788 men include 50 per cent of boys and are classifiable as follows:—

Under 21 years of age.....	395
Married men.....	152
Over 21 years unmarried.....	241
	<hr/>
	788

Of the 152 married men 37 have boys living at home and adding to the family earnings. 21 have no dependent children and 59 are men who would find much difficulty in finding employment elsewhere if the Company did not retain them on its payroll.

Regarding the 241 unmarried men, the Company would point out that it requires a large number of additional face-workers or miners to balance the other mine employees, and there is an opportunity for any and every able-bodied man to qualify for a position in the mine that will give him much higher wages, and the Company's efforts have for months past been directed to inducing these men to take work at the coal-face.

The average wage of all classes of men employed at the Dominion Coal Company's mines in 1921 was \$1,450. This average includes men and boys and represents not alone the rate of earnings but the actual money taken out of the office.

The following Statement was read and filed with the Board by Mr. J. J. McNeil.

To my mind the case presented by the representatives of the British Empire Steel Corporation outraged all rules of logic and sinned mortally against justice.

Their main argument, if I may dignify it as such, was that wages must be reduced if the Cape Breton coal operators are to meet American competition in the St. Lawrence market. The statements with which they attempted to bolster up their case in this connection, were for the most part mere declamation, backed by no semblance of proof. In refutation of the inconclusive argument they formulated anent the St. Lawrence markets and American competition we have the sworn testimony of G. W. Caye, the purchasing agent of Grand Trunk Railway, to the effect that American coal transported from mines owned by the Grand Trunk in Ohio could be landed in Montreal for only 7.94 without any allowance being made for profit. The coal of the Dominion Coal Company according to testimony given before the same committee was landed at Montreal for \$8.10 with an unknown profit included, a figure only 16 cents higher, though coal from the American mines owned by the Grand Trunk could be landed at actual cost plus transporta-

tion charges. Had an allowance been made for a reasonable profit on the coal from the Grand Trunk mines in Ohio, it is certain that they could not have landed coal in the St. Lawrence market at a price to compete with, to say nothing of underselling, the Dominion Coal Company.

The gloomy forebodings that the officers of the B. E. S. Corporation experience in reference to lower prices in the St. Lawrence market next spring are based on an assumption which is not only illogical but narrowly escapes being absurd. By dipping into the future they forecast a substantial reduction in American freight rates which will enable their American competitors to land their coal at Montreal cheaper than they could last summer. Their fallacy here consists in this, that though they predict a substantial reduction in American freight rates, they postulated a continuation of our excessive transportation charges in Canada. If it is a valid assumption to state that there will be a substantial reduction in American freight rates, surely it is not less valid to assume that present transportation charges both by rail and water, which now adversely affect the B. E. S. Corporation, will undergo an equally substantial reduction next spring. Indeed the utter lack of carrying trade in Canada today would furnish a sound basis for the contention that ships next spring can be chartered for "an old song".

When speaking of American competition the representatives of the B.E.S. Corporation admitted that the wages paid American miners are far in excess of those paid in the Cape Breton coal fields. The wage cost entering into the production of a ton of coal in American mines is therefore greater than the wage cost entering into the production of a ton of coal in Cape Breton. If therefore the B. E. S. Corporation cannot compete with American coal in the St. Lawrence market it is not on account of wages. The other items entering into the total cost of coal in Cape Breton, such as "deflition(?)", defuention(?) administration and sales, profit, etc., must be greater than the same items in American mines. There therefore can be no just or satisfactory settlement of this matter until the production costs in the mines of the B. E. Corporation are produced. These costs were persistently called for by the parliamentary fuel committee last spring, but owing to some unfortunate and unexplainable difficulty in locating Mr. Gordon, who alone possessed the information, these costs were not obtained. I think we are fortunate in having Mr. Gordon before the Board now, and we may be able to get from him today the information which the B. E. Corporation defied a parliamentary committee and outraged public opinion to withhold.

The contention of the Company's representatives in reference to the cost of living would be highly humorous were it not dealing with such a serious and acute matter. Their argument that living costs had declined in December, 1921, to 42 per cent above 1914, is based upon a family budget for a solitary family, to which they did

not even give a "local habitation or a name" and from calculation based upon this nameless family concerning which we know nothing, other than it is supposed to exist, they deduce the gratifying news that the prices of foodstuffs clothing and other necessities are now but 42 per cent higher than they were in 1914. In refutation of this general conclusion which they drew from a particular case we may confidently uphold the figures concerning the cost of living already submitted to the Board by Mr. McLachlan and which stand unchallenged and unrefuted.

Mr. McDougall's rebuttal was taken up principally with a defence of the so-called merger. I was sorry to hear such a worthy man defending such an unworthy cause. The inception of the B. E. Corporation took place according to Mr. McDougall "to settle a difficult situation with reference to coal areas in Nova Scotia and iron ore areas in Newfoundland owned by competing companies". Although we admit that the somewhat vexatious question involved between the competing companies was settled by the inclusion of those companies in the merger, yet it is hardly probable the English stock promoters would conceive and bring forth a monopolistic baby like the B. E. Corporation merely to settle the question in dispute between a few rival Cape Breton coal companies. But if, according to Mr. McDougall, the merger was formed merely to settle such a dispute how comes it that a white elephant in the shape of the Halifax Shipyards found its way into the merger, the expressed object of which was to settle a difficult situation in reference to submarine coal areas in Cape Breton? I don't believe that even the astute legal mind of my friend Mr. McInnis could find any connection between the Halifax Shipyards and the rival claims of competing companies to submarine coal areas in Cape Breton or iron ore areas in Newfoundland. But the Halifax Shipyards were included and the miners of Cape Breton are to be penalized and [impoverished] to pay dividends upon them. It is no answer to our argument in this connection to state as Mr. McDougall did that no dividends had yet been paid. They may not have been paid but unless Mr. McDougall wishes to go on record as saying that no dividends will ever be paid, we must take it for granted that they will be paid at some future date, and paid out of the labour of the men working in and about the mines controlled by the B. E. Corporation. And we submit that the Cape Breton and Pictou County miners should not be bled white to pay dividends upon what are now practically worthless assets.

Mr. McDougall's attempted defence of the proposed excessive reduction to the lower paid class of workmen was somewhat ingenious but has very little to recommend it from the point of view of justice. He tells us that there are 888 men in this class, and of these 736 are unmarried. There is a tacit admission here that is disastrous to Mr. McDougall's argument. The care he exercised to group this particular class of labour into married and single shows that his conscience told him that the proposed rate for this class of

labour was not sufficient to support a man blessed with a family. He therefore emphasized the fact that 736 of them were unmarried. That may be so, but the point is that each one of the 736 referred to possesses the right to be married and to become heads of families. This right is an actual right and it cannot be denied to the labourers by the B. E. Corporation or any other corporation under heaven. Because these men are single Mr. McDougall would desire them to work for a wage that will forever keep them single and deny them the right to marry and make homes for themselves.

Scotland's great poet once said:

"To make a happy fire-side home for weans and wife

This is the true pathos and sublime of human life."

A corporation that would deny this right to its employees, has to my mind more to examine than mere wage rates and competitive conditions. It needs a thorough examination of conscience and a new code of morality.

1. The McKinnon award, the Patterson award, the report of the Royal Commission, also the Montreal Agreement, were frequently referred to in evidence before the Board. Therefore to clarify the understanding, we think it is well to say; information before the Board is that the McKinnon award was effective January 15th, 1920. The Patterson award, March 1st, 1920. The report of the Royal Commission is dated September 9th, 1920. And the Montreal Agreement is dated November 1st, 1920.

The McKinnon and Patterson awards, also the Montreal Agreement, were accepted by both parties to this dispute. The report of the Royal Commission was rejected by the employees and the employer.

2. The representatives of the Companies have said to the Board they wished to exclude certain employees from their wage agreement. The representatives of the employees object to this and state they have for years represented the particular employees referred to. The Board's answer to the Companies concerning this, is that the matter in question is not recorded in the application for this Board, therefore the Board is not required to deal with it.

3. On January 24th, Messrs. McCann and Baxter informed the Board that differences at Mines 2, 6 and 7 at Springhill, discussed before the Board January 23rd, had been settled, other than the general difference as per notice dated December 19th, 1921.

4. Representatives of certain employees claim thirty days' notice was not given on new rates put into effect January 1, 1922. Mr. McDougall said the old rates would be paid until thirty days notice is given.

5. The Companies did not file with the Board a statement of earnings or cost of coal per ton f.o.b. cars or vessel that we can make public, but they did provide such statement for the private information of the Board. The statement of earnings submitted covering a period of three months ending December 31st, 1921, indicate the necessity for an immediate substantial reduction in expenses. It is the unanimous opinion of this Board that the cost of coal f.o.b. cars or vessel as shown by the statement is in excess of what it should be, and that the spread between cost of production and cost to the consumer is too great. The Companies involved in this dispute do not retail coal except in the immediate vicinity of the mines.

6. Up to this point in this report, the Board is unanimous. His Worship Mayor Ling dissents from recommendation made by Mr. U. E. Gillen, Chairman, and Col. W. E. Thompson, Member, concerning reduction in rates of pay in the following paragraph, (No. 7). Every member of the Board sympathizes to the fullest extent with men who may be required to accept a reduction in wages, particularly where it means some hardship on the men or those dependent upon them; for that reason it has been most difficult for any two members of the Board to agree. The Board was repeatedly told by representatives of the Companies that in their opinion, if necessary reduction in wages were made so as to enable them to compete with foreign coal companies in our home

markets, the mines would be operated to their full capacity; if, however, the necessary reduction in wages was not made, the mines could only be operated sufficient to supply what coal is required to meet the immediate demands of the markets open to them.

7. The Montreal Agreement, dated November 1, 1920, was the result of negotiations between the parties to this dispute and prescribed rates of pay in effect until end of December, 1921. Immediately preceding the Montreal Agreement, the McKinnon Award, dated 15th January, 1920, was in effect; the rates in that award and one or more of the important clauses in the conditions, were the result of negotiations between the employer and employees; therefore after careful consideration of all evidence before this Board, we recommend cancellation of the Montreal Agreement, the recreation of the McKinnon Award, same to be in full force and effect on and after January 1st, 1922, except that the wages of the datal men, who received \$3.25 or under per day under that award, be reduced 12½ per cent and that the wages of all other men be reduced 20 per cent.

By way of explanation, we may say the datal rates under the McKinnon award were \$3.25, under the Montreal Agreement \$3.80, under the notice dated December 19th from the Companies abolishing Montreal Agreement and making a 25 per cent reduction on rates established by the McKinnon award, \$2.44. Under this award \$2.85. His Worship, Mayor Ling, says he will submit a minority report.

All of which is respectfully submitted.

(Sgd.) U. E. GILLEN,
Chairman.

(Sgd.) W. E. THOMPSON,
Member.

Minority Report

In the matter of the Industrial Disputes Investigation Act, 1907, and a dispute between the Dominion Coal Company, The Nova Scotia Steel and Coal Company, and the Acadia Coal Company and certain of the employees of those Companies, being miners and coal laborers, members of District No. 26, United Mine Workers of America.

To Honourable James Murdock,
Minister of Labour,
Ottawa.

Sir:

The Board appointed by the Department of Labour to enquire into the above named dispute, met in the Board of Trade Rooms, Halifax, January 16th, and continued in session from day to day until January 26th, 1922.

Having been unable to agree with the findings of the other members of the Board, I respectfully submit this minority report.

(1) In my opinion the wage rates proposed by the majority report, if enforced, shall condemn thousands of men, women, and children, engaged in the mining industry of Nova Scotia, to live in a state of semi-starvation, and work under a wage rate which was arrived at on very incomplete evidence.

(2) The Companies did file with the Board a statement of earnings or cost of coal per ton f.o.b. cars or vessels that the Board could not make public, nor the miners' representatives allowed to examine and test the truth of, by witnesses, and therefore I was unable to agree with the other members of the Board to the slaughter of the miners' wage rates on such masked and unverified testimony.

The statement of the earnings submitted by the Company covering the three months' period ending Dec. 31st, 1921, was also unverified and hidden from the miners' representatives, but

even if true, was altogether too short a period covered to admit of any reasonable conclusion being drawn from it. The statement covered the most abnormal period of the Company's operations, the mines working fifty per cent time and over-head charges continuing one hundred per cent, thus pushing up the costs to an exceptional and abnormal degree.

✓ (3) It is the unanimous opinion of this Board that the cost of coal f.o.b. cars or vessels as shown by the statement submitted by the Companies, *is in excess of what it should be*, and the spread between the cost of production and cost to the consumer is too great. Therefore, I dissent from the majority report in making sweeping reductions of the wage cost and thus increasing and widening an already dangerous and criminal spread between the producer and consumer.

✓ (4) Almost all the other "evidence" submitted by the Companies was conjecture, surmise, and guess-work, and not a statement of facts at all. They conjectured that the price of coal in Montreal market would be less than it now is, six months hence, they surmised that freight rates in the United States to the Canadian border would be lower in the months to come. They guessed that the rates of exchange between this country and the United States would go down in the future. I was unable to come to any conclusion at all on such guesswork evidence, and therefore dissent from the findings as outlined in the majority report.

(5) Exhibit "I" which you will find attached hereto, is a copy of page 20 of the Financial Statement of the Dominion Steel Corporation for the year ending March 31st, 1921, and was submitted to the Board by the representatives of the employees. This exhibit proves that the earnings of the Steel Corporation were \$3,678,311.76. But the steel end of this corporation is half idle now, and when working under normal condition can, according to the evidence of the employers, only be made to pay when

coal is supplied to it from the mines at a rate away below market prices. I am strongly of the opinion that both coal mines and steel work should carry their own legitimate load of cost.

(6) I made an earnest and sincere effort to agree with the other members of the Board to find such a solution of this difficult question as was likely to bring peace and steady employment to the coal industry of Nova Scotia; and in this connection I went even further in the matter of reducing wage rates than under other circumstances my best judgment would have allowed me to go. And as I fully believe that the majority report will utterly fail to bring peace and harmony between the employers and employees of the Companies affected I therefore respectfully submit to your Department and the parties directly affected, the following as a working agreement:—

(a) That a contract be entered into covering the period from January 1st, 1922, to December 31st, 1922, and in the event of either party desiring a change, that the party desiring the change shall give thirty days' notice prior to December 31st, 1922.

(b) That in the event of neither party asking for a change as above outlined, then the contract shall be continued subject to a thirty days' notice from either party at the end of each four months period commencing January 1st, 1923.

✓ (c) That all contract rates prevailing December 31st, 1921, be reduced 14 per cent.

(d) That a minimum rate of \$3.50 per day be established for all datal rates other than boys.

(e) That bearing in mind section (d) that all other datal rates be reduced, but not in any case more than 55c. per day.

(f) That all datal rates paid by the Nova Scotia Steel and Coal Company be made to conform to the same

class of rates as paid by the Dominion Coal Company and the Acadia Coal Company.

(g) That the rules governing working conditions be the same as those in the so-called Montreal Agreement.

(Sgd.) JAMES LING,
Member of Board.

New Waterford, C.B., Jan. 26, 1922.

EXHIBIT "I"

DOMINION STEEL CORPORATION LIMITED AND CONSTITUENT COMPANIES

Consolidated Profit and Loss Account for the fiscal year ending March 31, 1921.

Net earnings (including interest on investments and surplus funds), after deducting all manufacturing, selling and administration expenses, and provision for income tax, but before charging sinking funds, depreciation and interest..... \$7,212,750.71

Deduct—Provision for sinking funds, depreciation and renewals, etc..... 1,583,662.22
\$5,629,088.49

Deduct also—interest on bonds and debentures..... 970,776.73
\$4,658,311.76

Less—Preference Dividends for year ending March 31, 1921:
Dominion Steel Corporation, Limited..... \$420,000.00
Constituent companies..... 560,000.00
980,000.00

\$3,678,311.76
Add—Balance April 1, 1920..... 8,211,236.58
\$11,889,548.34

Deduct dividends on common shares of Dominion Steel Corporation, Limited, at the rate of 6 per cent per annum..... 2,226,000.00
\$ 9,663,548.34

NOTE.—The above is a copy of page 20 of the Dominion Steel Corporation, Limited, and Constituent Companies' Annual Report and Statements for year ending March 31st, 1921.

Agreement between the various railways, members of the Railway Association of Canada, and certain of their employees

PURSUANT to the recommendations of the interim report rendered in October last by the Board established to deal with the dispute between various railways, members of the Railway Association of Canada, and certain of their employees, being engineers, firemen, conductors, trainmen, yardmen and telegraphers, members of the several trades union of these classes of workers, negotiations between the disputants were renewed and as a result an agreement was reached. The Board was composed as follows: The Honourable Mr. Justice F. S. Maclellan, Messrs. Isaac Pitblado and David S. Campbell. Further procedure before this Board

was accordingly rendered unnecessary. The text of the agreement is reproduced in full below.

Text of agreement

Montreal, Jan. 16th, 1922.

To the Honourable
Justice F. S. Maclellan,
Judge's Chambers,
Court House,
Montreal.

Dear Sir,

Further conference having taken place between the representatives of the railways and the employees concerned in agreement executed at Montreal on

8th October, 1921, we take pleasure in sending you for your information and record a copy of agreement reached to-day, signed on behalf of the railways and the various groups of employees concerned.

Yours truly,

(Sgd.) W. G. CHESTER,
For the employees.

(Sgd.) G. HODGE,
For the railways.

TEXT OF AGREEMENT

Between the Canadian Pacific Railway, the Canadian National Railways (including the Grand Trunk Pacific Railway), the Grand Trunk Railway Lines in Canada, and the Toronto, Hamilton and Buffalo Railway; and The Brotherhood of Locomotive Engineers, The Brotherhood of Locomotive Firemen and Enginemen, The Order of Railway Conductors, The Brotherhood of Railroad Trainmen, and The Order of Railroad Telegraphers, represented by a Joint Conference Committee of the Organizations named.

MEMORANDUM OF AGREEMENT.

It is agreed between the above-named railway companies and their employees in engine, train and telegraph service, that the rates of pay made effective July 16th, 1921 (August 1st, 1921, for engineers and firemen on the Grand Trunk Railway), and existing schedules of rules governing working conditions, shall continue in effect subject to thirty days' notice, excepting where existing agreements show a longer period, from either the railways or their employees named herein, to the other.

The terms of the agreement dated 8th October, 1921, in so far as that agreement affects working conditions and the effective date of any changes in such working conditions, shall continue in effect.

It is understood and agreed that the rates provided for by this agreement shall be inserted in existing schedules on the individual railways, party to this agreement, to govern the several classes of employees named herein.

It is further understood and agreed that: based on the number of positions, the amount arrived at in the aggregate will be applied to adjust the rates for the same number of positions of agents and operators, assistant agents and train dispatchers, respectively, on each General Superintendent's District, as may be agreed upon mutually by the District Officers and representatives of the employees. For linemen the rates will be similarly adjusted between the Superintendents of Telegraphs and representatives of the employees.

The decrease applying to assistant agents in the so-called "Tentative Agreement" appears to be greater than the Wage Order which has been used by the railroads as a basis for this decrease. This matter will be adjusted between the managements and representatives of the men concerned.

For the Railways—

(Sgd.) G. HODGE,
For the Canadian Pacific Railway, and the Toronto, Hamilton & Buffalo Railway.

(Sgd.) A. J. HILLS,
For the Canadian National Railways (including the Grand Trunk Pacific Railway.)

(Sgd.) C. F. NEEDHAM,
For the Grand Trunk Railway System (Lines in Canada.)

For the Employees—

(Sgd.) ASH KENNEDY,
For the Engineers.

(Sgd.) J. M. MEIN,
For the Telegraphers.

(Sgd.) W. G. CHESTER,
Chairman Conference Committee.

Executed at Montreal,
January 16th, 1922.

COST OF LIVING ADJUSTMENT OF WAGES OF VANCOUVER ISLAND COAL MINERS

THE Cost of Living Commission appointed on January 21, 1919, to determine every three months the changes in the cost of living for coal miners on Vancouver Island, and to report the amount by which wage rates should correspondingly be increased or decreased, forwarded its report to the Department of Labour for the quarter ending December 31, 1921.* The Commission consisted of Mr. Matthew Gunness, representative of the miners; Mr. Tulley Boyce, representing the operators; and Mr. D. T. Bulger, Fair Wages Officer of the Department of Labour, Chairman.

As in previous investigations, forms were sent out to the merchants and dealers with whom the majority of miners were accustomed to trade in the various localities. The forms contained the same list of groceries, provisions, meats, etc., that was used on previous occasions. The method of computing the changes for the period under review was the same as used for previous adjustments, namely, to determine the percentage of increase or decrease, as the case may be, of prices of December 31 over September 30, for groceries, provisions, meats, etc., and to add a

further two-fifths of this increase, (or decrease) as an equivalent to cover similar increases (or decreases) in clothing, etc. A decrease of 9.94 per cent was ascertained, which amounted to a decrease in wages of 30 cents per day where the base rate was \$3 per day, and 31 cents per day where the base rate was \$3.15, the decrease in wages to become effective February 1, 1922, and to apply to all underground service, clerical and office employees.

Retail price lists were received from general merchants and retail dealers in meats in the towns of Nanaimo, Ladysmith, Cumberland, Courtenay, South Wellington, Union Bay, and Cassidy.

Sharp decreases were noted in sugar, prunes, soap, all flours, rolled oats, corn meal, sodas, lard, ham and bacon, fresh beef, mutton, pork and veal. Slight decreases were noted in jams, molasses, barley, corn and roast beef, oatmeal, cheese, evaporated fruits and matches. Slight increases were noted in syrup, dried peas, lima and small white beans, rice, tapioca, canned beans and tomatoes, vinegar, pickles, butter, tea and coffee. Sharp increases were noted in canned salmon, canned tongue, and evaporated milk. No changes were noted in brown beans, sago, canned peas and corn, cookies and flavouring extracts.

*For previous orders see **LABOUR GAZETTE**, December, 1921, page 1477, and various preceding issues.

PROCEEDINGS OF THE CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

FIVE new decisions of the Canadian Railway Board of Adjustment No. 1, have been received by the Department. (Earlier decisions of the Board appeared in the **LABOUR GAZETTE** for November, 1921, on pages 1359 to 1364, and in previous issues.) Case No. 103, the hearing of which had been deferred,

has reference to the pay of assistant agents on the western lines of the Canadian Pacific Railway. Case No. 111 has reference to the dismissal of an employee of the Canadian Pacific Railway on the charge of drinking intoxicants. Case No. 112 relates to the payment of a baggageman of the

Grand Trunk Railway System for overtime at a terminal. No decision has yet been given in case No. 113. Case 114 relates to the payment of crossing watchmen of the Grand Trunk Railway Company for Sunday labour. Case No. 115 has reference to the method of paying signal maintainers of the Grand Trunk Railway System.

Case No. 103.—The Canadian Pacific Railway Company (Western Lines) and the Order of Railway Telegraphers.

A controversy arose between the Canadian Pacific Railway Company, Western Lines, and the Order of Railroad Telegraphers with reference to the pay for assistant agents in the creation of new positions on the various districts. The company claimed that Article 28, clause "E" of the telegraphers' schedule which reads "The Minimum Rate for Assistant Agents will be \$78 per month," should be applied as it reads on all districts. The employees contended that the preamble of the schedule should govern in the matter of rates for assistant agents in new positions.

At the suggestion of the representatives of the company and of the employees, the Board decided that action be deferred pending further negotiations between the railway and the employees concerned.

Case No. 111.—The Canadian Pacific Railway Company (Eastern Lines) and the Order of Railway Conductors.

A trainman on the Canadian Pacific Railway was dismissed for violation of Rule G, which forbids employees drinking intoxicants. The company claimed that three of its officers had seen him and talked to him and after satisfying themselves that he had been drinking intoxicants had dismissed him from the service. The employee contended that when called to the superintendent's office on the day after he was charged with being intoxicated, he admitted having had two glasses of the ordinary temperance beer but denied having drunk

any intoxicants at any time that day. In opposition to the evidence of the company's officers, statements were produced from five witnesses who had seen and talked with the discharged man on that day denying that there was any indication that he had been using intoxicants.

By decision of the Board the claim of the employees was denied.

Case No. 112.—The Grand Trunk Railway System and the Brotherhood of Railroad Trainmen.

A disagreement arose between the Grand Trunk Railway Company and the Brotherhood of Railroad Trainmen over the wages paid a train baggageman who was held in his baggage car on two occasions after reaching the end of his run, the first time for one hour and twenty-five minutes and the second time for one hour. The company contended that this employee was paid strictly in accordance with Article 3, Clause "B" of the schedule which reads "Trainmen on passenger runs shall be paid overtime on a speed basis of twenty miles per hour, computed continuously from the time required to report for duty until released at the end of last run."

The employees contended that in accordance with Rule 11 of the Trainmen's schedule this baggageman should receive extra compensation as provided for by the rule for time held in the baggage car after his road trip had been completed.

By decision of the Board the claim of the employees was sustained.

Case No. 114.—The Grand Trunk Railway Company and the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

A disagreement arose between the Grand Trunk Railway Company and the United Brotherhood of Maintenance of Way Employees as to the payment of crossing watchmen at Hamilton for Sunday labour. The company claimed the right to make any arrangement for taking care of the seventh day work. It

held that the schedule only covered six days' work and that if a regular man wished to work on the seventh day at regular rates it had the right to employ him. It claimed that some of the men requested in writing the privilege of working on the seventh day at *pro rata* rates, and that in complying with this request there had been no violation of the schedule.

On behalf of the employees, it was claimed that that the crossing watchmen involved were required to work seven days per week for *pro rata* time, in violation of a clause in the agreement which reads as follows: "Time and one-half shall be paid for work done on Sundays, Christmas Day, New Year's Day and Labour Day", except for patrolling their own section of track. Employees with this exception, shall be paid at the rate of time and one-half for Sunday work unless assigned a regular day per week off duty instead of Sunday. They further contended that no official or individual employee or group of employees had power to abrogate, amend or revise the agreement. They therefore asked that the crossing watchmen affected be allowed time and one-half for all Sundays worked from April 1, 1919, to August 31, 1920, except such as were relieved from Sunday duties.

The decision of the Board was as follows:

The Board decides that effective from the date when it was agreed and conceded between the company and the organization that crossing watchmen were to be included in the schedule, crossing watchmen who worked on Sundays without being allowed one day

off in the week shall be paid time and one-half for such Sunday work.

Case No. 115.—The Grand Trunk Railway System and the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers.

A dispute arose as to the method of paying signal maintainers of the Grand Trunk Railway Company at Toronto terminals. The employees contended that the payment of signal maintainers was governed by Clause E, Section 22 of Wage Agreement No. 5 between the Canadian Railway War Board and the United Brotherhood of Maintenance of Way Employees and Railway Shop Labourers. The clause provided that this class of service should be paid the equivalent of two hundred and forty hours per month at the rate to which they might be entitled under Clauses A and C of this section, in lieu of any overtime pay which they might earn. They therefore made claim for the difference in the rates actually received by them and those as established by Wage Agreements No. 3 and No. 5, such adjustment of pay to be retroactive to April 1, 1919. The company contended that the signal maintainers were paid for the actual time worked in accordance with the schedule, and that they were not affected by Clause E of Section 22 of Wage Agreement No. 5. It was the understanding of the company that when this clause was originally entered in Wage Agreement No. 2 (Revised), it was to cover only the men who were regularly employed in road service.

By decision of the Board the claim of the employees was sustained.

STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1922

THE time loss on account of industrial disputes was greater during January than during either December or January, 1921. Six strikes, involving 993 workpeople, were reported as having commenced during January. There were in existence at some time or other during the month 23 strikes, involving approxi-

mately 3,357 employees and a total time loss of 76,070 working days, as compared with 17 strikes, 2,883 workpeople and 64,733 working days in December, 1921; and 21 strikes, 1,736 workpeople and 30,065 working days in January, 1921. The time loss occasioned by the 6 strikes which began in January was

14,606 days, while a loss of 61,464 working days was due to the 17 strikes that commenced prior to January. None of the strikes commencing prior to January were terminated, but two strikes commencing in January terminated during the month, leaving the following 21 strikes affecting 3,199 workpeople on record at the end of the month: coal miners, Drumheller; coal miners, Sydney; building trades, Toronto; employees of steel and coal companies, Sydney;

gauge men, Sydney; compositors, Montreal; compositors, etc., Vancouver; linotype operators, etc., Gardenvale, Que.; photo engravers, Montreal; photo engravers, Ottawa; printers, Montreal; printers, Ottawa; printers, Toronto; printers, Winnipeg; printers, bookbinders and pressmen, Halifax; typesetters, pressmen and bookbinders, Hamilton; two strikes of garment workers, Montreal; tailors, Charlottetown; cigarmakers, Vancouver, and shoemakers at Toronto.

Disputes by Industries

The following is a review of the disputes by industries in the order in which they appear in the statistical table. A brief summary is given of the more important strikes.

MINES, SMELTERS, QUARRIES, CLAY PRODUCTS, ETC.—A strike of 575 miners in Cape Breton commenced on January 14, growing out of the recent wage reduction put in effect by their employers. The wage reduction appears to be the more remote origin of the dissatisfaction, but the immediate cause of the strike is reported to be the transference of drivers to other duties and their subsequent suspension for alleged shirking. Mine managers blame the drivers for the trouble, claiming that, since the wage reduction these employees were not giving their best work. The strikers consider that the employers are taking advantage of industrial conditions to "drive" their employees. The strike is reported to be without authority from the headquarters of District 26, United Mine Workers of America.

The strike of miners in the Drumheller field, District 18, was untermiated at the end of the month. Departmental mediators were advising the appointment of a Board of Conciliation, which was receiving the consideration of the executives of both sides. The situation for the month in this group was 2 strikes, involving 725 employees with an estimated time loss of 11,950 working days.

BUILDING AND CONSTRUCTION. — In

Toronto, 200 employees in three building trades organizations—plasterers, plasterers' labourers, and sheet metal workers—struck in protest against a wage reduction. The strike commenced on January 2, and was untermiated at the end of the month. The Department was endeavoring to use its good offices in adjusting the dispute.

PRINTING AND PUBLISHING.—Eleven strikes involving 1,758 employees and an approximate time loss of 45,388 working days was the standing for the month in this group. The strike for the 44-hour week is still in effect in Halifax, Montreal, Ottawa, Toronto, Winnipeg and Vancouver. An additional strike commenced at Gardenvale, Que., on January 7, when a dispute arose over the reported refusal of the firm to dismiss certain employees who had discontinued their membership in the International Typographical Union and joined the National Catholic Syndicate. The Union claims that the cause of the strike was a disagreement "regarding the terms of a contract verbally accepted."

CLOTHING.—One hundred and forty clothing workers in Montreal struck against a wage reduction averaging between 12 and 15 per cent. After being on strike two days, work was resumed on a compromise basis of a reduction averaging 7 per cent. Fifty journeymen tailors went on strike at Charlottetown, P. E. I., against a wage reduction on piece work. This strike remained untermiated at the end of the month.

STRIKES AND LOCKOUTS DURING JANUARY, 1922

Industry or Occupation	Particulars	No. of employees affected	Time loss in working days
MINES, SMELTERS, QUARRIES, CLAY PRODUCTS, Etc.—			
Coal miners, Drumheller, Alta.....	Commenced December 22. Against a reduction in wages. Unterminated.	150	3,900
Metals, Machinery and Conveyances—			
Employees of steel and coal companies, Sydney, N.S.	Commenced November 22, 1920. For increased wages and improved working conditions. Unterminated.	150	3,900
Gauge men, Sydney, N.S.....	Commenced June 9. In sympathy with employees of the steel and coal companies. Unterminated.	16	416

Garment workers, Montreal, Que.....	Commenced January 12. Against a reduction in wages. Settled by negotiations; work resumed January 16.	140	420
Tailors, Charlottetown, P.E.I.....	Commenced January 16. Against a reduction in wages. Unterminated.	50	700

STRIKES AND LOCKOUTS IN THE UNITED KINGDOM DURING DECEMBER, 1921

THE following details with regard to strikes and lockouts in the United Kingdom during December, 1921, and during the years 1921 and 1920, based on returns from employers and workpeople, are taken from the January issue of the British *Labour Gazette*.

NUMBER, MAGNITUDE AND DURATION.

The number of trade disputes involving a stoppage of work, reported to the Department as beginning in December, was 35, as compared with 74 in the previous month, and 34 in December, 1920. In these new disputes about 6,600 workpeople were directly involved and 300 indirectly involved (*i. e.*, thrown out of work at the establishments where the disputes occurred, though not themselves parties to the disputes). In addition to the numbers involved in new disputes nearly 7,700 workpeople were involved, either directly or indirectly, in 50 other disputes which began before December, and were still in progress at the beginning of that month. The total number of new and old disputes in progress in December was thus 85, involving about 14,600 workpeople and resulting in a loss during December of about 127,000 working days.

CAUSES.—Of the 35 new disputes, 19, directly involving nearly 5,100 workpeople, arose out of proposed reductions of wages; 6, directly involving about 600 workpeople, on other wages questions; 4, directly involving about 700 workpeople, on questions respecting working hours; and 6, directly involving about 200 workpeople, on other questions.

RESULTS.—During December, settlements were effected in the case of 12 new disputes, directly involving over 4,600 workpeople, and 24 old disputes, directly involving about 3,900 work-

people. Of these disputes, 8, directly involving about 400 workpeople, were settled in favour of the workpeople; 9, directly involving about 4,200 workpeople, in favour of the employers; and 19, directly involving over 3,900 workpeople, were compromised. In the case of 8 disputes directly involving nearly 900 workpeople, work was resumed pending negotiations.

The following table classifies the disputes by groups of trades, and indicates the number of workpeople involved (whether directly or indirectly) at the establishments concerned, and the approximate time lost during December in all disputes in progress:—

Groups of Trades.	Number of disputes in progress in December			Number of workpeople involved in all disputes in progress in December.	Aggregate duration in working days of all disputes in progress in December.
	Started before 1st December.	Started in December.	Total.		
Building.....	8	3	11	600	6,000
Mining and quarrying..	9	6	15	7,100	57,000
Metal, engineering and shipbuilding.....	12	4	16	1,000	10,000
Textile and clothing	5	5	10	900	15,000
Other trades	16	17	33	5,000	39,000
Total, December, 1921.	50	35	85	14,600	127,000
Total, November, 1921	47	74	121	36,000	252,000
Total, December, 1920	65	34	99	77,000	529,000

The number of disputes shown for December is the lowest recorded in any month since December, 1918; the numbers involved in disputes and the aggregate time lost are lower than for any month since the early part of 1917.

Of the 127,000 working days lost in December by all the disputes in progress, about 91,000 were lost by disputes which

began before December and were still in progress at the beginning of that month, and 36,000 by disputes which began in the month.

Trades Disputes in 1920 and 1921

The total number of disputes beginning in 1921 was 800, compared with 1,715 in 1920.

About 1,800,000 workpeople were involved, either directly or indirectly, and about 86,000,000 working days were lost through disputes which began in 1921, or which began before 1921 and were still in progress at the beginning of that year. In 1920 about 2,000,000 workpeople were involved in disputes having an aggregate duration of approximately 27,000,000 working days.

ANNUAL CONFERENCE OF THE ALBERTA FEDERATION OF LABOUR

THE ninth annual conference of the Alberta Federation of Labour was held at Lethbridge on January 9 to 11 with about 75 delegates present. President Frank Wheatley occupied the chair. The officers' reports referred to difficulties experienced during the year by the organization due to unemployment and its attendant hardships. There had been added to the membership, however, local unions of the following trades: bookbinders, bakers, projectionists, street railway men and garment workers of Edmonton, cereal mill workers and railway clerks of Medicine Hat, teamsters of Calgary and musicians of Lethbridge. The financial statement showed the receipts for the year as \$4,185, most of which came from the per capita tax, while expenditures were \$3,234 and the bank balance \$950. Attention was called to the necessity for measures for the relief of unemployment. Regret was expressed that the United Mine Workers of Lethbridge are unaffiliated with the Lethbridge Trades and Labour Council. During the year a co-operative store had been started by the labour men at Lethbridge which had proven a success.

The convention decided to press for the labour legislation submitted by the Federation and not adopted by the preceding government. It approved of the announcement of the federal Minister of Labour that the unemployment question would receive his immediate attention and expressed willingness

to co-operate heartily in this respect. The executive was instructed to bring to the Minister's attention the critical situation prevailing in Coalhurst and other mining centres, and to request that immediate action be taken toward placing the mining industry on a more stable and permanent basis. The executive was also instructed to take up with the provincial government the matter of establishing a permanent policy to deal with the unemployment question. The present Alberta government was commended for its efforts to relieve unemployment, and endorsement was given to the action taken at the unemployment conference called by the provincial government which met in Edmonton on August 23, 1921 (see LABOUR GAZETTE, September, 1921, page 1154). The following recommendations with regard to unemployment were adopted: that public works should be undertaken by the government during periods when there is unemployment and scarcity of other work and not during periods when work is plentiful and labour scarce; that the refusal of jobless men to work on farms or elsewhere for board and lodging be not considered as grounds for refusal to grant these men "no-work" cards, and that a system of unemployment insurance should be introduced by the federal government at the next session of parliament. The convention also recommended in all contracts let by the provincial government or sub-contracts arising therefrom, or contracts on which

they guarantee the bonds, that residents of Canada should be given preference in employment, and that such contracts should provide for the payment of the union wages and hours prevailing in the district.

The Honourable Alexander Ross, provincial Minister of Labour, laid before the convention a draft of a proposed minimum wage bill to be introduced at the coming session of the legislature, also a draft of a proposed early-closing by-law for the stores of the province. After discussion, the convention recommended concurrence in the bill, with slight amendments. It decided that 6 p.m. should be the closing hours for stores on all week days with the exception that on either Saturday or Wednesday every shop should close at 1 p.m.

Among other resolutions adopted were the following: that the federal government do all in its power to encourage trade with Russia; that a member of the Federation be appointed to investigate old age pensions; that work required by the telephone department be not let out to contract by the government; that the Coal Mines Act be amended requiring that every miner possess a certificate of competency, and to provide for the payment on every second Saturday of employees' wages; that provision be made for a maximum 44-hour week and one day's rest in seven for all workers; that fire fighters be guaranteed a pension, and be allowed one day's rest in seven; that jurors be paid \$8 a day so that working people can serve and not feel the loss of their wages; that the minimum wage for teachers be \$1,200 and that the model teachers' contract be granted; that the provincial government recognize the necessity of establishing negotiations with the accredited representatives of their employees through the respective *bona fide* organizations; that an Industrial Conditions Act be enacted; that there be a pro-

vincial standard for milk and that the percentage of butter fat be raised; that the compulsory school attendance age for children be raised to 16 years; that electors sick in hospitals and university students be privileged to vote on election day; that proportional representation be put into effect in all provincial elections; that legislation be enacted regulating the employment of women in factories, offices and shops before and after childbirth, and the night work of women and young persons; that legislation be enacted providing for the sanitation of barber shops and the efficiency of barbers, with provision of examining and licensing of members of said profession; that the Theatre Act be amended to provide for the appointment of an inspector, a board to examine the capabilities of applicants for license, and rules for the issuing of licenses. It was also recommended that the Workmen's Compensation Act be amended to provide for competent stage electricians to be in charge of all switchboards; for the appointment of sufficient inspectors to enforce the safety measures for building operations; to broaden the medical aid scheme so as to bring rheumatism and anthrocosis(?) within the scope of the Act; to increase the scale of funeral benefits to \$200; to guarantee protection to workmen regardless of whether the major industry of the employer is within the scope of the Act, provided the industry in which the workman is engaged is within its scope; to assure the worker of a full allowance for loss of time through illness directly due to his occupation; to guarantee payment of claims 14 days after date of accident, everything being in order, and further payment each 14 days thereafter and settlement within five days after the worker returns to work.

President Frank Wheatley and Secretary A. Smitten were re-elected. Medicine Hat was chosen for the meeting place of the next convention.

ANNUAL CONFERENCE OF THE ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRIES

THE Fourth Annual Conference of the Canadian Association of Building and Construction Industries was held at Hamilton, Ont., on January 17 to 20. The President, Mr. J. B. Anglin of Montreal, occupied the chair. The principal subject of discussion was the relations between employers and employees in the building trades. An important resolution was also passed regarding apprenticeship.

The report of the labour committee of the conference was adopted. This report contained the following resolutions:—

Resolved that the basic principles herein enumerated should be adopted:—

1. No business can last unless there be a substantial accumulation of reserves in order to provide for expansion, periods of depression, and unfortunate experiences involving loss.

On the other hand, employees are justly entitled to expect a remuneration for their services which is more than sufficient to provide for a mere existence, and which will enable them to accumulate a surplus to meet contingencies always provided that efficient services have been rendered.

2. In localities where any particular labour organization or organizations are in the ascendancy, it is wise and expedient for employers and the employees representing such organization or organizations to enter into agreements, the objects of which will be to stabilize the industry. But it must be recognized that every individual should have the unrestricted right to work where and with whom he chooses, irrespective of his affiliations with labour organizations.

3. Labour organizations, who effect agreements with employers, should not endeavour to make use of this relationship to the disadvantage of such employers, in order to wrest advantages from employers who do not make such agreements with labour organizations.

The combined efforts of both parties should be exerted to increase and stabilize the earning power of both employers and employees.

4. There should be no discrimination against either employer or employee in a locality where no trouble exists, because of the collective action of his organization in another locality.

5. The best efforts of both employers and employees should be directed to the elimination of jurisdictional disputes.

6. The general principles of arbitration should be the basis of settling all disputes. Each party should agree to submit disputes to arbitration, and refrain from making use of lock-out or strike until the lapse of a specified period after the recommendation of the Board of Arbitration has been made.

7. Special encouragement should be given to Apprenticeship.

The foregoing principles are those that may be held to apply to existing conditions and any change in these conditions that the future may bring forth may warrant their modification or amendment.

Resolved, that in the common interest of the public, the employee and the employer, the policy of this Association shall be to deal directly with the actual employees rather than with business agents.

Resolved, that when any agreements are reached with Labour, that these be reduced to writing, and that they should only cover wages and hours of work, having in view the stabilizing of rates, and that the basic principles enunciated above should find expression in all such agreements.

Resolved, that the very apparent injustice created by the flat rate system appears to have no complete solution at this time; but it is recommended that all members of this Association should do everything possible to reward the more efficient men by arranging, by transfer, to provide constant employment for these men.

Resolved, that in our industry we have found Joint Industrial Councils tend only to cause dissension rather than cure it, and therefore such Councils should not be continued.

Resolved, that until such time as the Labour members of this Board can agree to the basic principles adopted at this Conference, that the activities of the Board shall cease.

Whereas the present conditions are not favourable for the training of apprentices in the construction industry, and

Whereas it is realized that a serious shortage of trained artisans in certain trades exists:—

Resolved, that the Executive be authorized to take up this question with the Federal Department of Labour, in an effort to assist the employers by proper legislation and funds to alleviate this condition.

Resolved, further, that the National Apprenticeship system, as adopted at the May, 1922, Conference at Ottawa, be modified where necessary by the preceding and following recommendations, and particularly as to age limit, and that it should be used as a basis for action.

The attitude of the Association toward joint industrial councils arose from the failure of the National Joint Conference Board of the Building and Construction Industries which met at Ottawa on January 10, to reach an agreement as to the basic principles that should be re-

cognized by employers and employees in dealing with specific questions coming before these councils. A statement of principles had been submitted by the employers to the Joint Conference Board, which were similar to those adopted by the Association in their first resolution given above, with certain exceptions. These principles however had not met with the approval of the union representatives, and the alternative proposals made by them had been rejected by the employers' representatives.

POLICY OF FEDERAL GOVERNMENT ON UNEMPLOYMENT RELIEF

ON January 25, an order-in-council was passed (P.C. 191) setting forth the policy of the Dominion Government with regard to the relief of unemployment. The complete text of the order-in-council is as follows:—

The Committee of the Privy Council have had before them a report, dated January 25, 1922, from the Prime Minister, submitting the following observations with reference to the Order-in-Council on October 7, 1921, (P.C. 3831) respecting unemployment relief.

1. The present administration, assuming office at the close of the year 1921, finds that a condition of unemployment beginning in the late months of 1920 and continuing throughout the year 1921 does not promise any material abatement during the early winter months of 1922.

2. Consideration has been given to the means which would seem best adapted to the relief of the distress resulting from severe unemployment conditions, and the provisions to this end of P. C. 3831 have been carefully noted.

3. The Minister concurs in the view that the question of unemployment relief is fundamentally a municipal and provincial responsibility; that the abnormal economic and industrial conditions now existing and arising in a measure out of the late war alone afford justification for action on the part of the federal authorities; that federal action must, therefore, supplement municipal and provincial efforts, must be designed on lines permitting close and effective co-operation with and

supervision by municipal and provincial authorities, and must be proportioned by the efforts of those authorities.

4. That municipal undertakings in the nature of public works are important factors in meeting unemployment conditions, but such undertakings cannot be proceeded with during the winter months save at a considerably increased cost, which is in many cases beyond the financial resources of the municipalities.

5. That, having these various points in mind, it is desirable that federal employment assistance and unemployment relief should be granted on the following basis:—

(a) In the case of public works undertaken by a municipality during the winter months and specially with a view to relief of unemployment in the district, the municipality will bear the normal cost and the federal government will bear one-half of the extra cost incurred by the prosecution of the work during the winter season, the estimate of the normal cost to be approved by officers of the Federal Department of Public Works; the Federal grant to be conditional on the province assuming responsibility for one-third of such excess expenditure.

(b) That where work cannot be provided, the Federal Government will refund to a municipality one-third of the disbursements made on account of unemployed relief, disbursed to others than those specified in paragraph (d) following and conditional on the participation on an equal basis by the province concerned.

(c) That where in certain provinces there are unorganized districts without municipal

government in which unemployment and distress exists and the Provincial Government finds it necessary to administer a system of unemployment or distress relief, the Federal Government reimburse the Provincial Government concerned to the extent of one-half of such disbursement for relief and for the administration of the unemployment or distress relief policy in the district.

(d) That in the case of unemployed former members of the Canadian or British Forces, now in Canada, discharged as physically fit or not entitled to assistance by the Department of Soldiers' Civil Re-establishment, the Federal Government will reimburse the municipal authorities to the extent of one-half the disbursements made for unemployed relief, the remaining quota to be contributed in equal parts by the Province and municipality respectively.

6. It is to be noted that these regulations do not seek to meet the case of disabled members of the Canadian Overseas Forces and other classes of returned soldiers which fall within the jurisdiction of regulations administered by the Department of Soldiers' Civil Re-establishment; or of persons (where such exist) whose necessities do not clearly arise from inability to secure employment, and with whose necessities the municipal authorities have been accustomed to deal.

7. It is the expectation of the Federal authorities that the provisions herein will be interpreted broadly and generously by the municipalities and the provinces so that no resident of Canada willing and able to work and unable to secure employment shall lack food, clothing or shelter for himself or herself and dependants.

8. These provisions to continue in effect until the close of the present fiscal year.

LABOUR LEGISLATION IN CANADA IN 1921

DURING the past year regular sessions were held by the Parliament of Canada, by the Legislatures of all the provinces, and by the Council of the Yukon Territory, and many laws directly or indirectly affecting labour were enacted. Summaries of such legislation have appeared in previous issues of the LABOUR GAZETTE in each case where the session terminated before the close of the year. The Legislature of British Columbia held two complete sessions during 1921, important labour legislation being passed at both sessions. The Saskatchewan Legislature did not meet until December 8, but the Speech from the Throne promised legislation providing for the establishment of a bureau for child protection and for the confirmation of agreements entered into with the Government of Canada respecting relief, and measures relating to minimum wages, mothers' allowances, mines and factories inspection were also contemplated. A second session of the New Brunswick Legislature was opened on December 29, 1921.

In continuation of its series of reports on Labour Legislation in Canada, the Department of Labour has in course of

preparation a report covering the year 1921, from which report the following summary is taken. The chapter numbers quoted refer to the Statutes for 1921 of the Dominion or of the province concerned. No reference is made to acts dealing with professional classes, including school teachers, civil servants, etc., except in the case of acts in which some principle of interest to labour is introduced, as, for example, those providing for boards to arbitrate disputes arising between these classes and their employees.

The Dominion Government, in conformity with the recommendation of the first conference of the International Labour Organization (League of Nations), held at Washington, D.C., in October, 1919, to the effect that wool infected with anthrax germs be disinfected either in the country exporting such wool or at the port of entry, issued an order-in-council rendering more explicit the order issued in the previous August in regard to anthrax infection. The earlier order approved regulations previously made under the Animal Contagious Diseases Act, requiring the furnishing of sanitary certificates by foreign exporters

as to cleanliness of wool and hair destined for Canada. The province of British Columbia also had regard to the draft conventions of the first International Labour Conference and the Provincial Legislature at the first session of 1921 enacted a series of measures which dealt with the employment of women during the night and before and after child-birth; the night employment of young persons in industry; the minimum age for the employment of children; and the limitation of the hours of work in industrial undertakings. The legislation in question will, however, come into force concurrently with, or after, the coming into operation, in other Provinces of the Dominion, of laws containing similar provisions. An exception to this proviso was made in the case of the Maternity Protection Act which was amended at the second session of the Legislature (chapter 32) so as to be effective on January 1, 1922, this statute being the first legislative act of its kind to come into force in the Dominion.

It is interesting to note that some of the legislation enacted is in accordance with recommendations contained in the Report of the Royal Commission on the Uniformity of Labour Laws, which Commission sat at Ottawa during the last week of April, 1920. Among such enactments may be mentioned amendments to the Workmen's Compensation acts of Manitoba and Alberta; factory act amendments in Ontario; the Hours of Work Act of British Columbia; the provision of an eight-hour working day for underground employees in Yukon Territory; as well as several measures and orders tending towards stricter inspection of plants and more secure conditions for the workers.

The main provisions of the labour measures passed during the year are outlined below under their subjects heads.

Arbitration and Conciliation

An act passed in Quebec respecting disputes between employers and employees of municipal public services (chapter 46) provides for the establishment of boards for the compulsory arbitration in municipalities employing not less than ten workers, of disputes as to wages, hours of work, or membership of a trade union; the procedure closely follows the lines of the Federal statute, the Industrial Disputes Investigation Act, 1907. The employees covered by the act are policemen, firemen, water-works employees, and the sanitary incineration service.

In an act to amend the School Ordinance of Alberta (chapter 43), a Board of Conciliation is provided for in the event of a dispute arising between a board of trustees and any of its teachers in regard to the carrying out of existing contracts, this board to consist of three members, one representing the trustees of the Province, one the teachers of the Province and the Chairman of the Board.

Workmen's Compensation

Various amendments were made to the Workmen's Compensation acts of Alberta, Manitoba and Nova Scotia, the scale of benefits being considerably raised in the two former Provinces. By an amendment to the Dominion Bankruptcy Act (chapter 17), indebtedness under any Workmen's Compensation act is included among those debts of a bankrupt which have priority over general claims.

In Alberta (chapter 38), the scale of compensation for the dependents of workers who are killed is raised from \$30 to \$35 for widows, and for children under 16 from \$10 to \$12.50 with advances also in the amounts payable to other dependents. For permanent total disability compensation is no longer made as formerly by weekly payments at a flat rate of \$10 with further allowances to dependents, but instead the amount is estimated at 55% of the rate of average earnings during the previous

year. The same method is followed in cases of temporary total disability, so long as the disability lasts. For permanent partial disability the weekly payment is 55% of the average earnings of the worker before and after the accident, but where the disability is less than 10% the Board may substitute a lump sum for weekly payments. Formerly a definite value was assigned to the part of the body injured and payments made on that basis. The minimum amount of compensation for permanent or temporary disability was fixed at \$10 per week, or the amount of average earnings where these were less than \$10. On the other hand the average earnings of a workman may not be held to exceed \$2,000. Further important amendments provide that where the deceased worker leaves no widow, or the widow subsequently dies, a relative or foster mother taking the place of the parent, may receive the same amount of compensation as a widow would receive; that workers in any industry not within the scope of the act, have the privilege, formerly confined to employers, of applying to the Board to be admitted; and that all Provincial employees may benefit under the act. Rules issued by the Alberta Board during the year under the Workmen's Compensation Act were amended in regard to the medical aid fees to be collected from workmen, also in regard to accident prevention and interest charges in cases of arrears. The Board also provides for first aid instruction to employees in the factories and shops of the Province.

The amending act in Manitoba (chapter 83) increases the amount of allowance for burial, and removes the previous limit of \$60 per month as the maximum amount payable to a family of dependents. The minimum weekly compensation for permanent total disability is advanced from \$6 to \$15. In sub-contracts the principals are held responsible for payment of compensation in cases where the immediate employer has failed to provide protection. Further provision is also made to safe-

guard the interests of the workers in cases where action is taken in the civil courts against some person other than the employer. Under regulations issued by the Manitoba Board during the year employers were required to make provision for first aid equipment at their plants.

An amendment was made in the Nova Scotia act (chapter 48) reducing the amount of annual wages estimated for purposes of assessment, to be earned by fishermen working on shares.

By an order of the Ontario Workmen's Compensation Board theatre stage and moving picture operators were brought under the Act of that Province.

An arrangement was made during the year between the Provincial Governments of Quebec and Ontario whereby workers residing in Quebec, but employed in Ontario, will henceforth, in the event of accident be entitled to compensation from the Province in which they were employed.

Inspection and Regulation of Factories, Boilers, etc.

By the Factory, Shop and Office Building Amendment Act of Ontario (chapter 76) the minimum age for the employment of children in shops was raised from 12 to 14 years, except where members of an employer's family work in a shop attached to the house in which they live. Factory inspectors were required to report any cases of failure to comply with the provisions of the Minimum Wage Act as to the posting in the establishments concerned of the orders of the Minimum Wage Board. The inspectors may direct that chairs be provided for female employees in cases where they can work as efficiently when seated. The requirements of the Act are subject to the provisions of the Adolescent School Attendance Act providing that adolescents shall attend schools or part time classes up to the age of 18. Provision is made for the closing on any day, on the order of a

City or Town Council, of a specified class of shops, provided three-fourths of the occupiers of shops of the same class have applied to have such action taken.

In Quebec (chapter 37) head butter and cheese makers are required to possess certificates of qualification for their position.

In Quebec (chapter 75) and New Brunswick (chapter 10) new measures provided additional security to workers in regard to fire.

An amendment to the Alberta Factories Act (chapter 41) makes some changes in the powers assigned to the Minimum Wage advisory committee.

Several amendments were made in the Boilers' Inspection Act of British Columbia (second session, chapter 4), the regulations governing the erection and inspection of boilers being made more stringent. No certificate issued under this section is now transferable. A new scale of fees is also provided for the examination of engineers and new regulations are made for registering boilers. It is further provided that the Crown shall have a lien as a first charge upon any steam boiler for the amount of fees due.

The Steam Boiler Inspection Act of Nova Scotia (chapter 10) brings inspection by Dominion and Provincial authorities into closer conformity.

Municipalities in Quebec are required by an amendment to the Act respecting the inspection of scaffolding (chapter 76) to employ an inspector who must issue certificates to contractors erecting scaffolding over 15 feet in height.

Examination and Licensing of Workmen

New measures affecting workmen's licenses were passed in several provinces, chauffeurs' licenses being dealt with in Nova Scotia, Quebec and Alberta, and electricians' licenses in Quebec. In Alberta, an additional provision was made (chapter 5) to the Motor Vehicle Act to the effect that a chauffeur who operates only a conveyance carrying pupils to

and from a consolidated school is not required to pay a license fee.

The Ontario Stationary and Hoisting Engineers Act of 1919 was amended (chapter 56) by widening its scope to cover new classes of steam plants, and by revising the existing rules as to the registration of engineers, the employment of substitutes and the issue of provisional certificates.

Hours of Work

Acts affecting the working hours of employees were passed in several provinces. In Ontario, the "two-platoon" system for fire-fighters was established (chapter 80) in cities with a population over 10,000, and additional powers were given (chapter 76) to municipalities in regard to the closing of specified classes of shops. In British Columbia the measures already referred to in connection with the Washington conventions make provision respecting an 8-hour day and the night employment of women and young persons. Further provision was also made in the same Province (second session, chapter 52) for the closing of stores on certain days. A Yukon Territory ordinance limits to eight hours the working day of underground employees on mineral claims.

Minimum Wages

Amendments were made in the minimum wage acts of Ontario and British Columbia, and to the sections of the Alberta Factories Act which define the powers of the minimum wage committee. The Ontario Minimum Wage Board was given power (chapter 78) to suspend temporarily or to vary any of its orders upon petition of employers or employees and to make different orders for the same industry in different localities where conditions vary. The first orders of the Ontario Board were issued during the year. These orders govern the wages of female employees in laundries and dye works, retail stores, and certain classes of industrial establish-

ments in Toronto. (The last order was extended early in 1922 to cover all such establishments throughout the Province.) The Factory, Shop and Office Building Act (chapter 76), as noted above, secured the co-operation of factory inspectors in regard to the posting in factories of the orders of the Minimum Wage Board.

Amendments to the British Columbia Minimum Wage Act made new provisions (chapter 40) governing the wages of inexperienced workers, and the issue of special licenses. The Board was also, by another act, as mentioned in the next section, placed in charge of the administration of the Mothers' Pensions Act. New regulations in relation to learners and inexperienced workers in various industrial establishments were under the consideration of the Board as the year closed.

The Alberta Factories Act of 1917 was amended (chapter 41) with regard to the powers of the advisory Committee on minimum wages, the Committee being empowered to recommend but not to "determine" the minimum rates of wages to be paid to and the maximum hours of labour to be worked by female employees as classified according to locality and occupation. The Committee may also make recommendations regarding apprentices, who will be similarly classified, their wages, hours of work, term of indenture and, if advisable, conditions of apprenticeship. Orders-in-council appointing this committee were issued, but these were subsequently cancelled.

Orders were issued by the Manitoba Minimum Wage Board standardizing the regulations previously made regarding rates of wages for female employees in various industries.

The Minimum Wage Board of Saskatchewan issued with some minor amendments, the previous order regulating wages in shops, millinery and dressmaking establishments, laundries and factories, mail order houses, and hotels and restaurants.

Payment of Wages

By a Yukon Territory ordinance (chapter 8) wages earned during any month by persons engaged in mining operations in the Territory, including workers in stores and offices as well as miners, must be paid not later than the 15th day of the following month.

Mothers' Pensions

Changes were made in the Mothers' Pensions acts of Ontario and British Columbia, while in Manitoba new administrative facilities were created. A Royal Commission appointed in December, 1919, by the Government of Nova Scotia, to inquire into the subject of Mothers' Pensions, recommended the adoption of a scheme for that Province.

The scope of the Ontario Mothers' Allowances Act was extended (chapter 79) to conform with the provisions of the Adolescent School Attendance Act of 1919, the age limit for children towards whose support allowances are paid being raised from 14 to 16 years upon the coming into force of the latter act. The benefits of the allowances act were also extended to cover cases of desertion; also to cover the mother of one child under 14 years who has also dependent on her an invalid husband or another child over 14; and foster mothers. The Commission is authorized to use its discretion as to the granting of allowances in cases of women otherwise not strictly eligible. Reciprocal arrangements may be entered into by the Commission with other provinces, regarding the payment of allowances.

The British Columbia act was amended (chapter 43) by a clause requiring domicile in the province at the time of the husband's death, disablement, incarceration, etc. The administration of the act was placed (second session, chapter 35) in charge of the Workmen's Compensation Board, instead of being, as under the original act, assigned to a Minister specially designated to this duty. The

functions of the Superintendent of Neglected Children under the original act were also transferred to the Board. The Board was authorized as in Ontario to assist cases not specially provided for, and was further given the right of appointing local advisory Boards which were previously appointed by the Lieutenant Governor in Council. A series of regulations under the act was issued at the close of the year.

Maternity Protection

The Maternity Protection Act of British Columbia (chapter 37) forbids the employment of any woman in any industrial or commercial undertaking during the six weeks following her confinement and permits her on production of the necessary medical certificate to leave her work six weeks previous to the probable date of confinement. Employers are forbidden to dismiss employees so absents themselves from work.

Mines Regulation

A few changes were made in the various provincial acts regulating the mining industry. An Ontario regulation requiring that the hoisting rope in a mine shall once in every six months have a portion not less than six feet in length cut off the lower end, was proclaimed and became effective. The British Columbia Act was amended (chapter 39) to prohibit any light or lamp other than a locked safety-lamp to be used underground in any mine after July 1, 1921. The regulation as to the watering and treating of dusty places in a mine was extended to cover all mines without exception. Some minor changes were also made in the acts of Nova Scotia (chapter 20) and Alberta (chapter 5).

Employment Service

The Trades and Labour Branch Act of Ontario of 1916 was further amended

(chapter 77), the Lieutenant-Governor-in-Council being given authority to make regulations for the establishment of a Provincial Employment Service Council and Local Employment Service Councils, pursuant to the provisions of the Dominion Employment Offices Co-ordination Act of 1918.

The Employment Agencies Act Repeal Act Amendment Act of British Columbia (chapter 18) requires persons or corporations keeping employment offices to make monthly returns to the Provincial Branch of the Employment Service of Canada. Public school teachers are definitely included among the workers for securing whose employment no agencies are permitted to accept fees.

All employment bureaus in Quebec were brought (chapter 45) under the general requirements of the Provincial License Act.

Immigration

The Immigration Act was amended by the Dominion Parliament (chapter 32) to allow entry to accredited representatives of international trade unions without regard to the conditions usually imposed on persons admitted to the country. Previous regulations requiring persons seeking entry to be possessed of money to a prescribed minimum amount were confirmed and widened to cover all classes of immigrants, except Canadian citizens, diplomatic representatives and officers and men of the military or naval forces and their families. The Chinese Immigration Act was also amended (chapter 21) by providing that all Chinese immigrants must establish their identity to the satisfaction of the Controller, subject to the approval of the Minister. A Board of Inquiry is given power to order the deportation of persons not allowed to enter and the definition of prohibited persons as contained in the Immigration Act is made applicable to Chinese.

Oriental Labour

The British Columbia Oriental Orders-in-Council Validation Act (chapter 49) confirmed the Orders-in-Council approved in 1902, forbidding employment of Chinese or Japanese in Provincial Government contracts, leases or concessions of any kind. (The Supreme Court of Canada, on appeal, decided early in February, 1922, that this statute was *ultra vires* the Provincial Legislature (see page 205 of this issue).

Liens

The Mechanics Lien Act of Nova Scotia (chapter 49) was extended in its scope in regard to liens on mining properties, while in British Columbia (2nd session, chapter 32) some administrative changes were introduced into the Act. In the latter province, also, the amount of wages exempted from attachment for debt was raised (chapter 5) from \$40 to \$60; and saw mill workers were included among those entitled to woodmen's liens.

Superannuation, Pensions, and Insurance

Dominion Government employees working for daily, weekly or monthly wages were included in the scope of the Public Service Retirement Act (chapter 49). The group insurance plant was adopted by the Province of Quebec (chapter 21) for the lives of all employees of the Provincial Government. A new pension fund was created in Alberta (chapter 14) for the benefit of the members of the Provincial police force. In British Columbia a voluntary and contributory superannuation scheme was provided (chapter 60) primarily for the benefit of Provincial, municipal and school board employees, but also available for industrial employees, who may agree with their employers to have 4 per cent of their wages deducted, and forwarded together with a like amount from the employer, to the Finance Min-

ister, this amount representing the employees' share in the superannuation fund.

Education

A new development took place in Ontario in regard to the guidance of school children in their selection of a life calling, provision being made for the appointment of qualified officers (chapter 90) to bring the work of the Vocational Schools to the attention of employers and employees, and to act as co-ordinating agents between local industries and the school authority. School boards were also authorized (chapter 89) to appoint officers to distribute among school pupils useful information regarding occupations and employments and enable them to make intelligent plans for the future. In Prince Edward Island provision was made (chapter 5) for the establishment of schools under the Dominion Technical Education Act. In Quebec a Provincial dairy school and intermediate agricultural schools were provided for (chapter 39). In British Columbia the age limit for the compulsory attendance of children at school was raised (chapter 56) from fourteen to fifteen years, while another act prohibited the employment in industrial undertakings of boys under 14 and girls under 15, except in undertakings in which only members of the same family are employed. Employers were required to keep a register of all their employees under 16 years of age.

Taxes of Employees

Employers in Nova Scotia having ten or more employees were required (chapter 56) to furnish the municipal collector with a list of their employees, and with respect to the rates and taxes due from these employees, the employers may make the required deductions from wages and pay these rates and taxes direct on behalf of their employees. Similarly, in British Columbia (second session, chapter 48) every employer is required to furnish the surveyor of

taxes with a list of his employees and a statement of the wages paid to each.

Electric Railways

A new section was added to the British Columbia Railway Act (second session, chapter 41) requiring street railway companies before introducing street cars operated by one man to obtain the consent of the Minister of Railways, who before sanctioning the operation of "one-man" cars is required to consult with the municipalities affected.

Housing and Fair Rent

Three acts respecting housing were passed during the year. A supplementary act relating to Better Housing was passed in New Brunswick (chapter 13)

giving additional powers to local housing boards.

The Manitoba Housing Act of 1919 was amended (chapter 33) to enable municipalities to advance money to war veterans whose property may be encumbered by reason of unpaid instalments of principal, interest or taxes.

In British Columbia (chapter 6) the amount which may be borrowed by the Provincial authorities from the Dominion Minister of Finance under Dominion order-in-council P.C. 2997, for better housing, was raised from \$1,500,000 to \$2,500,000.

In Nova Scotia the act of 1919 providing for fair rents and restricting the eviction of tenants (chapter 64) was amended so as to continue in force for another year.

JUDICIAL DECISIONS ON RIGHT OF EMPLOYERS TO REDUCE WAGES PENDING ACTION OF CONCILIATION BOARD

IN the January issue of the LABOUR GAZETTE, on page 109, a brief account is given of an action in the Nova Scotia Courts instituted by District 26 of the United Mine Workers of America and certain employees, who sought an injunction to restrain the Dominion Coal Company, the Nova Scotia Steel and Coal Company, and the Acadia Coal Company from reducing the wages of their miners before the matter had

been dealt with by a Conciliation Board for which the men had made application under the Industrial Disputes Investigation Act, 1907. An interim injunction to restrain the companies from reducing their wages was issued by Mr. Justice Russell. The companies appealed against this injunction, and their appeal was sustained by the Supreme Court of Nova Scotia.

The two decisions are given below.

Decision of Mr. Justice Russell

The following is the complete text of the decision of Mr. Justice Russell, giving his reasons for granting an interim injunction against the coal companies:

RUSSELL, J.:—This is an application by counsel on behalf of Robert Baxter, President, and one other named official of District No. 26 of The United Mine Workers of America, and also of three

persons named as members of the said District and employees of the defendants suing on behalf of themselves and all other members of the District or employees of the defendant who may wish to join. The application is for a restraining order against the Dominion Coal Company and two other companies named to restrain them from making certain proposed reductions in the wages

of the employees pending the decision of a Board of Conciliation under Chapter 20 of the Acts of 1907.

Objection is taken to the status of the United Mine Workers as plaintiffs, being an unincorporated body, although the authority of the case of *Cumberland Railway Company vs. MacDougall et al.* 44 N.S. R. at 453, is cited in answer to the contention. As there are parties other than those referred to who can properly be plaintiffs the question thus raised must ultimately resolve itself into a mere question of costs which it is not at present necessary to decide.

The substantial question with which I have to deal is raised by the provisions of Section 57 of the Chapter already mentioned, which is as follows:

“Section 57. Employers and employees shall give at least thirty days’ notice of an intended change affecting the conditions of employment with respect to wages or hours; and in the event of such intended change resulting in a dispute until the dispute has been finally dealt with by a Board and a copy of its report has been delivered through the Registrar to both parties affected, neither of these parties shall alter the conditions of employment with respect to wages or hours,” etc.

Notice was given on the 19th of December, 1921, by the Dominion Coal Coal Company to all the employees at No. 9 Colliery of the said Company that changes therein specified would be made which would become effective on the 1st of January, 1922, and there can be no doubt, in view of the affidavits before me, that these changes involved reductions. With the propriety of or necessity for these reductions, it goes without saying that I have nothing whatever to do. The sufficiency of the notice is disputed because the section of the Act already quoted provides for a notice of thirty days, and the notice actually given is less than half that period. But the more important question is that presented by the fact that the notification of the proposed reductions has “resulted in a dispute” and that under the provisions of Section 57 un-

til that dispute has been finally dealt with by a Board of Conciliation no such reduction as proposed can become effective.

It is contended on behalf of the defendant companies that no injunction or restraining order should issue because it is not shown that any irreparable injury can result from the coming into effect of the order; and it is suggested in favour of this contention that the only injury that can be occasioned is one which a money payment can remedy. I think, however, that the jurisdiction in the matter of injunctions has been greatly enlarged by the Judicature Act which has enacted that “an injunction may be granted in all cases in which it shall be just or convenient” that such a remedy should be administered. Assuming the proposed reductions to go into effect on the First of January, and to be greater than a Board of Conciliation would approve of, the result might be that hundreds or thousands of rights of action would lie at the instance of individual employees against the companies for the unpaid balances due to the employees.

I am well aware that the proper construction of the phrase in the Judicature Act to which I have referred has been the subject of much comment and that the mere opinion of a Judge that a proposed restraint would be just or convenient is not sufficient in itself to warrant the intervention. The words used by Jessel, M.R., in the case of *Aslatt vs. The Corporation of Southampton* must be my guide in this case: They are reported in 16 Ch. D., at page 148:

“Of course the words just or convenient did not mean that the court was to grant an injunction simply because the court thought it convenient; it meant that the court should grant an injunction for the protection of rights or for the prevention of injury according to legal principles; but the moment you find there is a legal principle, that a man is about to suffer a serious injury and that there is no pretence for inflicting that injury upon him it appears to me that the court ought to interfere.”

I think that in these words the Master of the Rolls has indicated the spirit in which the remedy by way of injunction should be administered.

The defendants are about to effect a reduction of the wages payable to their employees after an inadequate notice and without the sanction of a Board of Conciliation which Chapter 20 of the Acts of 1907 makes a condition precedent to the change coming into effect. I think the number of persons to be affected by the change has much to do with the propriety or otherwise of granting the remedy. I am told that there may be thousands. It seems to me more convenient that the defendants should

be required to stay their hands until the matter has been dealt with by a Board of Conciliation than that a change should be made of which it is possible that such Board might not approve. The provisions of the Statute of 1907 seems so clear, and to prohibit the proposed changes on such distinct terms that I think it both "just" and "convenient" that the injunction should be issued. It has not been made clear to me that the right to the injunction has been established as respects the companies other than the Dominion Coal Company, but I assume that the intention to reduce wages is common to them all.

Halifax, December 30, 1921.

Decision rendered by Supreme Court of Nova Scotia on appeal

The following is the text of the Decision of the Supreme Court of Nova Scotia sustaining the appeal of the companies and setting aside the interim injunction which restrained them from reducing the wages of their miners:

MELLISH, J.:—The plaintiffs' claim is against defendants for a decree that the notice given or about the twentieth December, nineteen twenty-one, by the defendants herein of intended wage reduction and altered conditions in the mines operated by them is illegal as against the plaintiffs herein and an injunction to prevent the same going into effect.

District No. 26 is an unincorporated body, embracing in its membership the "Union" employees of the defendant companies.

On the 8th of November, 1920, an agreement was entered into on behalf of the defendant companies and their employees, fixing the rate of wages, etc., as from the 1st November, 1920, until 30th November, 1921, "both sides to agree to meet in Halifax twenty days before the expiration of this agreement *for the purpose of arranging a new understanding.*"

This is known as the "Montreal Agreement." It was subject to the ap-

proval of the Branch of the United Mine Workers of America known as District 26, a plaintiff herein. This approval was given as appears by a letter dated 22nd December, 1920, to the representatives of the different companies and signed by Mr. Baxter, President and Mr. McLachlan, Secretary of the District Union. On the 29th October, 1921, there is a letter from Mr. Merrill, General Manager of the Dominion Coal Company to Mr. McLachlan, referring to the latter's letter of 22nd December, 1920, and notifying him that the company's representative would attend in Halifax in conformity with the Montreal agreement on November 10th "*for the purpose of arranging a new understanding.*"

The letter points out that conditions are such that the company must in future pay smaller wages or restrict employment to one or two days per week.

The parties, *i.e.* the representatives of District No. 26 and of the companies, met at Halifax in compliance with the Montreal Agreement on November 10th, 1921, and on November 11th "it was mutually agreed that the said agreement be continued for a period of one

month additional or until 31st of December, 1921." "It was further agreed that a meeting of the representatives..... be held not earlier than December 15th, 1921."

This latter meeting was accordingly held at Montreal on 16th December, 1921, when the companies produced a new schedule of wages and conditions which the District Union refused to accept, and the modification of which apparently the companies refused to consider.

On the 20th December, 1921, the companies accordingly notified their employees that the proposed schedule would become effective on the 1st January, 1922, i.e. on the termination of the Montreal Agreement. This schedule provides for the payment of wages at rates 25 per cent less than those of the Montreal Agreement.

In view of the differences arising at the Montreal meeting on 16th December, an application was made on behalf of the employees to the Minister of Labour for a Board of Conciliation under the "Industrial Disputes Investigation Act, 1907." This was granted by the Minister on December 24th.

It is contended by the plaintiffs that by reason of the provisions of said Act the defendants are bound, notwithstanding the facts hereinbefore set out, to go on paying wages at the rate provided under the Montreal Agreement which is to be considered in force until the dispute has been finally dealt with by the Board and a copy of its report delivered to the parties affected, and that such agreement cannot be terminated except on a thirty days' notice.

A motion was accordingly made on plaintiff's behalf for an interim injunction restraining the defendants *inter alia* from putting into effect their proposed schedule until the trial. Mr. Justice Russell who heard the motion granted the order in these terms. The obvious intention of this order is to compel the companies to pay their employees under the terms of the Montreal

Agreement until the trial is concluded, and if the interpretation put on the Act by plaintiffs be correct, until the Conciliation Board has made its report.

This is an appeal from the said decision.

Following is the Section of the Act relied on by the plaintiffs:

"Section 57. Employers and employees shall give at least thirty days' notice of an intended change affecting the conditions of employment with respect to wages or hours; and in the event of such intended change resulting in a dispute, until the dispute has been finally dealt with by a Board and a copy of its report has been delivered through the Registrar to both parties affected, neither of these parties shall alter the conditions of employment with respect to wages or hours, or on account of the dispute do or be concerned in doing, directly or indirectly, anything in the nature of a lock-out or strike, or a suspension or discontinuance of employment or work, but the relationship of employer and employee shall continue uninterrupted by the dispute, or anything arising out of the dispute; but if, in the opinion of the Board, either party uses this or any other provision of this Act for the purpose of unjustly maintaining a given condition of affairs through delay, and the Board so reports to the Minister, such party shall be guilty of an offence, and liable to the same penalties as are imposed for a violation of the next preceding section."

Assuming for the present that the Dominion Parliament has the power to legislate in a way affecting, as this section obviously must, "property and civil rights" in the Province of Nova Scotia—a subject which under Section 92 of the B. N. A. Act is assigned "exclusively" to the Provincial Legislature, it must at least be conceded that such property or rights cannot be destroyed or impaired without clear and unequivocal language. This must be remembered in construing the section in question.

In my opinion the facts hereinbefore referred to including any other facts disclosed on the material before us are insufficient to establish that any of the defendants has violated or is violating or intends to violate the provisions of this section. I do not think either of

the defendants gave any notice of an "intended change" or of an intention to "alter the conditions of employment" within the meaning of this section.

It was the expressed intention of the parties that existing conditions should terminate on the 31st of December. After that date unless a previous arrangement was made as provided in the several agreements it was obviously contemplated by both parties that the conditions of employment should be open and unsettled. There is nothing I think in the Act to prevent the parties placing themselves in that position if they so desire. The Section of the Act hereinbefore quoted is, I think, dealing with such a change in "conditions" as might arise by the coercive action of either employer or employees and not with such as might arise by reason of the beginning or ending of the operation of such a contract as the Montreal Agreement. The notices given by defendants did not purport to change or alter any existing conditions. What they did propose was a schedule establishing new conditions to cover a period subsequent to the expiry of existing conditions on the date agreed on—a period as to which no conditions of employment had been settled either expressly or by implication. It was open to the employees to accept or reject this proposal, or to go on under protest as they apparently have done, saving any right of redress which may be afforded under the provisions of the Act or otherwise.

Being of this opinion I think it is unnecessary to deal with the other interesting and important questions raised on the appeal. On the ground stated I think there are no facts before us which would justify the action and am there-

fore of opinion, with great deference and respect, that the appeal should be allowed with costs and the judgment and order appealed from set aside.

Halifax, January 12, 1922.

RITCHIE, E. J.:—After having given the best consideration of which I am capable to the judgment of my brother Mellish I am unable to discover any answer to the position taken by him. I therefore adopt his judgment and the reasoning on which it is based. I may add that I have very grave doubt as to the power of the Parliament of Canada to pass the statutes on which the application for an injunction is made. The jurisdiction to legislate concerning "property and civil rights" is by Section 92 of the British North America Act given exclusively to the local legislature. The right to have wages continue on a certain scale that the plaintiffs contend for is certainly a civil right. The most plausible contention made in support of the statute was that it was *intra vires* as being a law "for the peace, order and good government of Canada" but in the "Attorney General for Canada v. The Attorney General for Alberta (1916)" I Appeal Cases, Viscount Haldane said at page 595:

"It must be taken to be now settled that the general authority to make laws for the peace, order and good government of Canada, which the initial part of s. 91 of the British North America Act confers, does not, unless the subject-matter of legislation falls within some one of the enumerated heads which follow, enable the Dominion Parliament to trench on the subject-matters entrusted to the provincial Legislature by the enumeration in s. 92."

However, I am content to rest my judgment on the point dealt with by my brother Mellish.

I would allow the appeal with costs.

Halifax, January 12, 1922.

BRITISH COLUMBIA LAW RESTRICTING ORIENTAL LABOUR DECLARED "ULTRA VIRES"

THE question of the validity of the British Columbia statute of 1921, entitled the "Oriental Orders-in-Council Validation Act," (see LABOUR GAZETTE, November, 1921, page 1334) was decided in the negative by the Supreme Court of Canada on February 7, 1922, the Court declaring this legislation to be *ultra vires* the provincial legislature. The orders-in-council confirmed by the statute were dated May 28, and June 18, 1902, and authorized the application to certain provincial works and concessions of the principle of the following resolution passed by the British Columbia Legislative Assembly on April 15, 1902:

That in all contracts, leases, and concessions of whatever kind entered into, issued, or made by the Government, or on behalf of the Government, provision be made that no Chinese or Japanese shall be employed in connection therewith.

The questions referred to the Supreme Court for decision were the following: (1) Has the legislature of British Columbia authority to enact this act? (2) If not, in what respect was the act *ultra vires*?

In giving judgment Chief Justice Sir Louis Davies stated that this legislation is *ultra vires* the provincial legislature, because the British North America Act reserved for the exclusive legislative authority of the Dominion the making of

laws with relation to such subjects as "naturalization and aliens." Such an interpretation of this section (section 91, sub-section 25) of the British North America Act, had already been made by the judicial committee of the Privy Council in the case of two appeals with relation to British Columbia legislation affecting Chinese and Japanese.

The Court further declared that the legislation in question conflicts with the Japanese Treaty Act of 1913, since it prohibits the employment of Japanese in the pursuit of their "industries and callings" in British Columbia on all provincial government works, or on works on lands held by leases, licenses or concessions authorized by the legislature of British Columbia, and places the Japanese on a footing less favourable than that of subjects or citizens of more favoured nations, contrary to the obligations of the treaty. The Crown was bound to perform within Canada its treaty obligations, the judgment declared, and "if so, it cannot successfully be contended that the Crown can by force of enactments of a Provincial legislature directly or indirectly break its treaty obligations."

Mr. Justice Idington dissented, and Mr. Justice Brodeur dissented in part, from the judgment of the Court.

REGULATIONS RESPECTING MOTHERS' PENSIONS IN BRITISH COLUMBIA

BY virtue of section 10 of the Mothers' Pensions Act, 1920, of British Columbia, the Lieutenant-Governor in Council approved in December last the following regulations (Nos. 1 to 14) respecting the expenditures to be made under the Act:

REGULATIONS.

1. No applicant for pension shall be considered as "indigent" if that person possesses more than \$500 in cash, bonds, stocks, or other negotiable securities, or personal property whatsoever except necessary household furniture and wearing apparel, or more than an assessed value of \$1,500 in real estate used as a

home, or an equity in real estate used as a home of a value in excess of \$1,500.

2. Where an applicant has a home valued at \$1,500 or less, or an equity of \$1,500 or less in a home, a reduction of \$10 per month shall be made in the pension which would otherwise be payable.

3. No applicant shall be granted a pension on the grounds of her husband being "an inmate of a penitentiary" unless there is a period of two or more years of his penal term still unserved at the date of the passing of the Act.

4. No applicant shall be granted a pension on the grounds of her husband being "unable to support his family by reason of total disability from sickness or accident" unless the applicant produces medical evidence satisfactory to the Board that the total disability may reasonably be expected to continue for at least one year, and any such pension granted shall not commence until at least two months from the commencement of such total disability.

5. No applicant shall be granted a pension on the grounds of being a "deserted wife" unless such desertion shall have continued for a period of at least two years prior to the filing of an application for a pension, or if the husband is a resident of British Columbia or the owner of property therein.

6. No applicant shall be granted a pension unless such applicant is the mother of the child or children for whom assistance is asked.

7. No pension shall be granted to any applicant who has children over the age of 16 years and who are capable of earning sufficient to support the family.

8. Where there are other relatives financially able to assist the applicant, partial pension only may be granted.

9. If the applicant is being furnished with board and lodgings without monetary cost to her for herself and family, the pension shall not exceed the sum of \$15 for the mother and one child, and \$7.50 for each additional child.

10. No pension shall be granted an applicant unless her husband was a resident of this Province at the time of the onset of the condition which resulted in his death.

11. No pension shall be allowed unless the Board is satisfied that the applicant is a person of good moral character and a fit and proper custodian for the child or children.

12. No pension shall be allowed when a child or children to be cared for are of a mentality making it more in their interests to receive institutional care.

13. No pension shall be granted if the applicant has made any false statement in her application for pension.

14. No pension shall be granted to an applicant unless she is the support of a child, or children, in such circumstances that proper care could not be furnished without Government aid.

CANADIAN IMPORTS AND EXPORTS

THE January issue of the LABOUR GAZETTE on page 73 contained some statistics of the Trade of Canada during the years ended September 30, 1919, 1920 and 1921, taken from a summary of the Dominion Bureau of Statistics. The Bureau has since issued a summary of the last three calendar years from which the following figures are taken.

The value of the imports for consumption during the year ended December 31, 1921, was as follows:—

Vegetable products	\$199,072,474
Animal products	43,793,277
Fibres and textiles.....	129,294,178
Wood and paper.....	38,239,672
Iron and its products.....	127,470,117
Non-ferrous metals	31,469,401
Non-metallic minerals	153,017,057
Chemical products	23,588,535
Other commodities	53,449,887
Total imports	\$799,394,598

The total imports for consumption during 1919 amounted to a value of \$941,013,613, and during 1920 to \$1,336,921,021.

The exports of Canadian products during the year 1921 were of the following values:

Vegetable products	\$357,728,877
Animal products	141,335,176
Fibres and textiles	7,875,525
Wood and paper.....	186,092,991
Iron and its products.....	32,620,942
Non-ferrous metals.....	27,214,004
Non-metallic minerals.....	25,034,872
Chemical products	10,086,477
Other commodities	14,710,956

Total exports\$802,699,820

The export of foreign goods during the past year amounted to \$13,994,461.

In the past calendar year the imports for consumption from the United Kingdom amounted to \$123,149,009 and from the United States to \$555,308,193; the exports of Canadian products to the United Kingdom amounted to \$308,866,848 and to the United States to \$326,969,382.

COAL STATISTICS OF CANADA FOR FIRST NINE MONTHS OF 1921

A REPORT of the Dominion Bureau of Statistics on Coal Statistics for Canada during the nine months ended September, 1921, shows a total output of 10.75 million short tons as compared with 12.08 million tons in the same period of 1920 and 9.15 million tons in 1919. Comparing the provinces, Nova Scotia led with an output of 4,263,134 short tons. Alberta came second with 4,022,615 tons, of which slightly more than half was bituminous, the balance being principally lignite, with 69,000 tons of anthracite. British Columbia produced 2,144,485 tons; Saskatchewan, 202,144 tons and New Brunswick, 124,144 tons. The last two mentioned provinces were the only ones this year to exceed their 1920 records. British Columbia mined 94 per cent of the quantity produced in the first nine months of 1920, and Nova Scotia, 90 per cent. Alberta produced 85 per cent of the quantity of bituminous and lignite coal credited to that province for the corresponding months of 1920, but the output of anthracite declined to 71 per cent of the

1920 production. The highest monthly output occurred in August when over 1.5 million tons were produced, the lowest monthly output being in April when rather less than one million tons were raised.

Exports amounted to 1.53 million short tons, or 14 per cent of the quantity mined, as compared with 2.3 million tons in the corresponding period of 1920, and 1.32 million tons in 1919. British Columbia was the province exporting the largest quantity of coal, the total for nine months being 864,541 tons. Nova Scotia ranked next with a shipment of 599,494 tons, and New Brunswick exported 65,839 tons.

Imports during the nine-month period ending September, 1920, amounted to 13.73 million short tons, which was 95 per cent of the quantity imported during the first nine months of 1920. The imports comprised 3.52 million tons of anthracite and 10.21 million of bituminous coal for 1921, and for 1920, 3.70 million tons of anthracite and 10.14 million tons of bituminous.

INDUSTRIAL STATISTICS OF ONTARIO FOR 1919

A PRELIMINARY report has been issued by the Dominion Bureau of Statistics on industrial statistics of the province of Ontario for 1919, with comparative statistics for 1917 and 1918. A similar report for the four western

provinces was summarized in the January issue of the LABOUR GAZETTE on page 75.

The following table gives the principal statistics relating to the leading industries of the province for the calen-

dar year 1919 in comparison with the two preceding years.

	1919	1918	1917
Establishments.....	16,438	15,365	14,381
Capital.....	\$1,583,161,271	1,508,011,435	1,335,968,699
No. employees on salaries.....	44,545	39,218	37,132
Salaries.....	\$67,249,559	56,802,691	49,270,800
No. employees on wages.....	278,814	294,754	289,503
Wages.....	\$269,328,710	263,937,523	229,191,908
Cost of materials.....	\$943,622,018	1,008,824,704	822,842,054
Value of products.....	\$1,737,543,996	1,809,067,001	1,533,738,655

In the amount of capital invested the greatest industry was that of electric light and power, of which there were 380 establishments with a total capital of \$192,898,095. Pulp and paper mills with a capital of \$95,281,040 ranked next. Butter and cheese factories with 1,104 plants led in the number of establishments, followed by plumbing and tinsmithing shops of which there were 845. In the value of products the largest industry was that of flour and grist mills, 588 of which had products to the value of \$150,061,254. Slaughtering and meat packing plants of which there were 28 came next with products valued at \$129,994,795. The largest number of employees were in lumber, lath and shingle mills in which there were 1,222 salaried employees earning \$1,846,144 and 21,932 employees on wages, earning \$16,871,282. Foundry and machine shops were in the second place with 2,431 salaried employees receiving \$3,737,271 and 13,601 wage-earners receiving \$14,473,926.

The following table gives information respecting the number of employees, and salaries and wages paid in forty leading industries in Ontario during 1919:

Industries	Employees on Salaries		Employees on Wages	
	No.	Salaries	No.	Wages
		\$		\$
Flour and grist mill products.....	633	1,080,642	3,353	3,248,087
Slaughtering and meat packing.....	1,710	2,116,685	5,276	5,885,650
Automobiles.....	937	1,560,633	5,834	8,152,155
Lumber lath shingles, etc.....	1,222	1,846,144	21,932	16,871,282
Butter and cheese.....	2,623	1,806,322	1,267	1,394,962
Pulp and paper.....	713	1,464,221	7,758	10,268,092
Rubber goods including rubber boots and shoes.....	1,327	1,678,008	7,201	6,790,962
Foundry and machine shop products.....	2,431	3,737,271	13,601	14,473,926
Building and construction.....	934	1,378,215	11,241	12,894,383
Leather, tanned, etc.....	232	616,102	2,739	2,709,934
Agricultural implements.....	1,172	1,721,990	8,758	9,423,607
Rolling mills and steel furnaces.....	322	706,583	6,474	8,679,852
Hosiery and knit goods.....	567	1,005,819	8,721	5,423,926
Smelting.....	323	699,435	2,155	3,067,051
Biscuits and confectionery.....	873	1,302,361	5,932	3,912,502
Clothing, women's, factory.....	782	1,475,002	5,715	6,393,067
Electric light and power.....	2,230	2,810,233	2,609	2,974,106
Bread and other bakery products.....	513	655,915	4,053	4,023,733
Plumbing and tinsmithing.....	777	922,338	4,967	4,814,126
Petroleum, refined.....	198	308,221	1,540	2,016,201
Woolen goods.....	216	527,866	4,316	3,290,298
Sash, door and planing mills.....	565	797,663	4,028	3,568,518
Electrical apparatus and supplies.....	1,182	1,705,092	5,092	4,536,565
Furniture and upholstered goods.....	727	1,158,589	6,498	5,112,209
Shipbuilding and repairs.....	243	485,014	5,328	5,845,328
Clothing, men's, factory.....	695	1,306,193	3,374	3,166,383
Boots and shoes, leather.....	590	1,093,755	4,002	3,135,823
Pig iron.....	67	165,471	989	1,521,102
Printing and publishing.....	2,066	2,722,269	4,156	4,079,777
Car repairs.....	467	808,423	7,219	10,424,751
Cottons.....	95	253,054	3,356	2,348,197
Printing and bookbinding.....	886	1,376,819	4,218	3,972,267
Sugar, refined.....	111	203,860	818	910,358
Condensed milk.....	88	130,805	680	568,446
Fruit and vegetable canning.....	223	291,480	2,270	1,262,649
Soap.....	244	375,227	811	616,994
Iron and steel products.....	215	409,231	1,918	1,976,168
Cars and car works.....	218	372,799	1,614	2,014,894
Furnishing goods, men's.....	390	772,935	2,235	1,361,399
Clothing, men's, custom.....	289	417,131	2,422	1,990,332
Totals for forty leading industries.....	30,096	44,283,816	196,500	195,120,062
Totals for all industries.....	44,545	67,249,559	278,814	269,328,710

The report also contains industrial statistics of individual cities and towns in Ontario having a population of 5,000 persons or over.

REPORT OF THE DIRECTOR OF TECHNICAL EDUCATION FOR CANADA

THE second annual report of the Director of Technical Education for Canada for the fiscal year ended March 31, 1921, has recently been published by the Department of Labour. A great advance over the previous year is indicated in the report. The total amount earned by the provinces under the Technical Education Act, which is based on provincial expenditures, increased from \$273,788 to \$665,167. Payments made to the provinces under the Act during the last fiscal year were \$580,635 and in the previous year, \$196,500. The total expenditures made by the provincial governments during the school years ended June 30, 1920, and June 30, 1921, respectively, increased from \$826,990 to \$1,241,243. The number of day schools increased from 41 to 69, and the evening schools from 127 to 193, with a corresponding increase in the number of teachers and pupils enrolled.

All the provinces are now actively engaged in developing a system of vocational training and technical education, Prince Edward Island, the last province to undertake this work, having established an Agricultural Technical High School in November, 1920. Important developments in various other provinces are recorded. In Nova Scotia, steps were taken to resume the correspondence courses which had been discontinued during the war. These

courses which had formerly been almost entirely confined to mining are now being extended to include a number of other subjects. Preparations were also made for more extensive work among the miners of that province. In New Brunswick itinerant classes for fishermen were inaugurated and a practical course in gas engine work was given to 265 fishermen. In Ontario additional evening classes were started in thirteen centres, and seven new schools were opened. Day classes were also organized for mechanics who were temporarily unemployed. In Manitoba, attendance at evening classes increased nearly 100 per cent. In Saskatchewan vocational education, which had been started in the Regina Collegiate Institute in 1919, was undertaken in three other schools. In Alberta, the Provincial Institute of Technology and Art was opened at Calgary in November, 1920, offering a variety of day, evening and correspondence courses. Prevocational and junior industrial education classes were formed at Calgary and Edmonton, to stimulate new interest in backward pupils, and to enable students with the aid of parents and teachers to choose suitable vocations. In British Columbia, new schools buildings were opened in Victoria, Vancouver and New Westminster, B.C., and additional day schools were opened in seven centres. Additional evening classes were also organized in eleven places.

VOCATIONAL EDUCATION AND INDUSTRIAL REHABILITATION IN THE UNITED STATES

THE fourth annual report of the Federal Board of Vocational Education of the United States contains an account of the activities of the Board during 1920. The work of the Board is carried on under three acts of Congress, the Vocational Education Act of

1917, the Rehabilitation Act of 1918 relating to soldiers, sailors and marines, and the Industrial Rehabilitation Act of 1920.

The report of the Vocational Education Division states that there has been a very general forward movement in

the United States with regard to vocational education. New day schools have been established in 32 of the 48 states during the past year, while only two states show a falling off in the number of day schools in operation. Reports of 44 of the 48 states show an increase in the number of evening classes. Compulsory part-time laws have been passed in 19 states, which in some instances force the establishment of part-time classes and in other instances develop these classes on an elective basis preparatory to meeting the requirements of the law at some later date. The Federal Board, which has devoted much time and attention to assisting the states in perfecting their programmes for the training of teachers for vocational classes, reports that more liberality for training practical men as instructors in trade education is needed in most of the states. During the year ending June 30, 1920, there were 30 states which were conducting teachers' training work in an entirely satisfactory way, 9 states had a fair system of teachers' training, and 8 states had no teachers' training in trades and industries whatever, while one state only offered summer courses, which were for the most part for teachers already employed. A number of states were conducting or purposing to conduct industrial surveys for educational trade analysis, and representatives of the Federal Board were assisting in organizing and analyzing the information obtained. A third service of the Federal Board was the development of effective programmes for foremen's conferences and the working out of methods for making such conferences effective. A fourth activity of the Federal Board was the development of methods of conducting simple and inexpensive local surveys to secure the information necessary for the setting up of a programme for industrial education to meet the needs in particular communities.

An account is given of the work of the vocational rehabilitation division of the Federal Board which was formed

under a law passed in June, 1918, for the retraining of disabled soldiers and sailors. By means of circulars widely distributed and surveys of hospitals, and with the aid of the Red Cross and other organizations, many thousands were reached, and by the end of June, 1920, over 100,000 cases had been registered. The Federal Board possesses no schools of its own, but during the fiscal year covered by the report it had utilized nearly 1,700 educational institutions, and had in addition made arrangements for training men in more than 8,000 shops, mills, factories and business places. It is stated that the attitude of the American Federation of Labour and trade unions generally toward the rehabilitation of disabled ex-service men has been one of genuine co-operation. Employers also have shown a spirit of co-operation, and it is stated that in practically no single case has an employer or employing concern refused to co-operate with the Board in providing facilities for training in the shop, office or factory. In the two years since the Board has been handling the rehabilitation of disabled soldiers more than 12,000 men have been placed with industrial concerns for training, and a fourth of that number have entered upon employment with these concerns.

The industrial rehabilitation division of the Board was formed on the passage of the Industrial Rehabilitation Act on June 2, 1920. The administration of this act is similar to the administration of the Vocational Education Act, as the rehabilitation of disabled workers is a responsibility of the state governments and not a direct obligation of the federal government as in the case of disabled soldiers, sailors and marines. Before a state can take advantage of the appropriations made in the Act it must, through legislative authority, accept the provisions of the Act. The Act provides that the State board for Vocational Education shall act as the state agent for co-operation with the national government and that the state treasurer

shall be the custodian of the federal funds allotted for this purpose. A plan outlining the methods proposed for carrying on the work of industrial rehabilitation shall be submitted by each state to the Federal Board for approval. This plan must show the kinds of vocational rehabilitation and schemes of placement proposed, the type of instruction to be provided, the course of study, the qualifications of teachers, provision for teacher training and the plan of administration and supervision. The essentials of a state plan for the administration of the Act have been outlined by the Federal Board, and certain points are suggested to be covered in the plan of co-operation required by the law between the state agency for workmen's compensation and the state board for vocational education. The Act allows much latitude to the states in drawing up laws to meet their various needs, as it is recognized that provision for the rehabilitation of the injured is an individual state problem. The duties of the Federal Board are to co-operate with the state boards in carrying out the provisions of the Federal Act; to examine plans submitted by the state boards and approve of the ones that are

in conformity with the Act; to ascertain whether the several states are using the federal grant in accordance with the provisions of the Act and to withhold the allotment of moneys when they have not been used in accordance with the Act. State boards determine the eligibility of persons who apply for training under the Act, except in the case of disabled civil employees of the United States, the Federal Board being required to refer them individually to the state board selected for their rehabilitation. The Act provides for an appropriation of \$750,000 for the fiscal year ending June 30, 1921, and for the next three years, \$1,000,000 annually. This sum is to be allotted to the several states in proportion to their population, with the provision that there must be expended within the state money equal at least to the federal funds received. Before the Federal Act was passed 12 states had made some provision for their handicapped workers, and since the law went into effect 17 other states have accepted the provisions of the Act through proclamation, and three other states accepted the Act through legislation.

MEETING OF THE INTERNATIONAL ASSOCIATION OF INDUSTRIAL ACCIDENT BOARDS AND COMMISSIONS

AT the eighth annual meeting of the International Association of Industrial Accident Boards and Commissions held at Chicago, Ill., on September 19 to 23, there were representatives from two provinces of Canada, 22 states of the United States and from the United States Bureau of Labour Statistics and Bureau of Standards. The question of "How Assessments are Made" was discussed by Mr. F. W. Armstrong, of the Workmen's Compensation Board of Nova Scotia, and that of "Merit Rating" by Mr. Geo. A. Kingston, commissioner of the Ontario Board. Other

subjects dealt with included: Reserves, Accident Prevention, Should Compensation Commissions Administer Accident Prevention and other Labour Laws, Court System of Administration, Administrative Troubles, Methods of Claim Procedure, and Medical Problems.

In his presidential address Mr. Charles S. Andrus recommended as legislative proposals: Compensation for occupational diseases; in permanent disability injuries, compensation for temporary total disability during the healing period in addition to the amounts provided for

permanent partial disability; unlimited medical service.

Mr. S. J. Williams, secretary of the United States National Safety Council, in a paper on the cost of industrial accidents, estimated the annual cost in the United States, including the wage loss of those killed or disabled, plus the cost of medical treatment, at \$1,014,000,000. Mr. John Roach, of New Jersey, stated that before effective accident prevention work can be expected not only employers and workers but the public generally must be imbued with the safety idea. A survey of the work of the National Safety Code Committee in formulating uniform safety standards was presented by Mr. R. McA. Keown, safety engineer of the Wisconsin Industrial Commission.

The association appointed a special committee to study the subject of compensation schedules for permanent disabilities and to formulate a schedule free from the objections of present schedules.

With regard to the question whether compensation commissions should administer accident prevention and other labour laws, it was evident that there was a striking tendency in the direction of consolidation of administrative departments during the year. Consolidation of labour-law-enforcing agencies and reorganization of industrial commissions were effected in the states of New York, Ohio, Michigan, Minnesota and Washington. Some of those present were of the opinion that accident prevention should be an important function of compensation commissions. The court system of administration of compensation acts was stated to be inadequate to secure justice to injured workmen, and to have been condemned practically everywhere.

Mr. E. S. Gill, of Washington, in discussing medical aid problems deprecated the contract hospital system in vogue in the state of Washington, claiming that

many of the hospitals provide inadequate service and that there would be much better results if the whole system was abolished. The following papers were presented at the medical session: Extent and Method of Medical Treatment, X-ray Interpretation and Standardization, Concussion and Contusion of the Brain with Post-concussional conditions, Neuroses—Their Handling from an Industrial Commission Standpoint, Can Breaking of Compensation in the Heart be Attributed to Accident, and Medical Aspects of Women's Ills in Industry.

Mr. Carl Hookstadt, of the United States Bureau of Labour Statistics, presented a paper on methods of accident reporting and claims procedure which gave conclusions as a result of a comparison of actual administrative practices of some 20 compensation commissions and funds investigated by the Bureau. One conclusion was that all accidents which cause time loss and require medical aid should be reported.

The resolutions adopted by the association included a re-endorsement of a uniform federal workmen's compensation act applicable to all maritime employments and employees, and an expression of appreciation of the valuable assistance given by the United States Bureau of Labour Statistics in regard to workmen's compensation legislation and administration.

It was decided that the next annual meeting would be held at Baltimore, Md., the date to be determined by the executive committee.

The following officers were elected: president, Robert E. Lee, chairman, Maryland Industrial Accident Commission; vice-president, F. A. Duxbury, chairman, Minnesota Industrial Commission; secretary-treasurer, Ethelbert Stewart, United States Commissioner of Labour Statistics. Mr. Fred W. Armstrong, vice-chairman of the Workmen's Compensation Board of Nova Scotia, was elected as one of the executive committee.

ANNUAL REPORT OF THE UNITED STATES DEPARTMENT OF LABOUR**Special Report of the Children's Bureau**

THE ninth annual report of the Secretary of Labour of the United States, which has recently been issued, contains an account of the activities of the various divisions and bureaus in the Department during the fiscal year ended June 30, 1921. These comprise the office of the Secretary, the bureaus of Labour Statistics, Immigration and Naturalization, and the children's and women's bureaus. The secretary's office includes the Division of Conciliation, the United States Employment Service and the Bureau of Industrial Housing and Transportation. The Division of Conciliation dealt with 457 cases of threatened or actual strikes involving about 593,000 workers directly or indirectly. The conciliation commissioners succeeded in adjusting 338 disputes only failing in 48 cases, the remaining cases being still pending at the end of the year. A recommendation was made that "special men" be appointed to act as conciliators in disputes affecting the twelve major or basic industries of the country. Each of these men would have expert knowledge of one of these industries, a thorough knowledge of the technicalities of these industries being considered necessary if a just and lasting settlement is to be effected.

The United States Employment Service continued the policy of co-ordinating the work of the state and municipal employment offices so far as funds would permit. In order to recruit workers for the harvest, between sixty and eighty thousand being usually required, officers were established at strategic points, and workers were recruited from communities where the least local disturbance would ensue by their transfer. An unemployment survey was made in January, 1921, and since then monthly statistics of employ-

ment have been published based on returns from 1,428 firms employing more than 1,600,000 workers. The junior division of the employment service was formed to aid the schools in assisting boys and girls to select and prepare for some definite occupation. Junior placement offices co-operating with the federal employment service are now functioning in 14 cities in the United States and similar arrangements are under way in a number of other places.

The record of the Bureau of Immigration shows a revival of immigration during the fiscal year 1921, there having been admitted 805,228 immigrant aliens as compared with 430,000 in the previous fiscal year. The races contributing the largest number of immigrants were the Italians with 222,496 and the Hebrews with 119,036. Chinese immigrants admitted to the United States for permanent residence numbered 4,017 as compared with 2,148 in the previous year. Japanese immigrants to continental United States decreased from 12,868 to 10,675. Japanese arrivals in Hawaii numbered 3,599 as compared with 3,306 in 1920.

REPORT OF THE CHILDREN'S BUREAU.

The ninth annual report of the Children's Bureau of the United States Department of Labour states that the appropriation for the Bureau for the fiscal year ended June 30, 1921, was \$271,040 as compared with \$280,040 in the previous year. The activities of the Bureau, which are "to investigate and report on all matters pertaining to the welfare of children and child life among all classes of our people," were conducted through the correlated work of five divisions—industrial, child hygiene, social service, editorial and statistical—in co-operation with other Government

and outside agencies. The creation of three additional divisions was recommended in the report; a division of legal research, a division of expert service in the field of recreation, and a division to report the scientific findings of the Bureau by means of the "exhibit method." During the year child welfare studies were conducted in the various states and in Porto Rico. One of the problems encountered in making these investigations was the securing of information from and imparting advice to the foreign population who could not speak English. This was partly solved by utilizing a foreign-language press service and the printing of periodical articles in 92 foreign-language papers.

In a survey of selected sugar-beet raising areas of Colorado and Michigan, covering 2,500 children between 6 and 16 years of age, 72 per cent of whom worked, and 1,400 additional children under 6 years, whose mothers or older brothers and sisters worked in the beet fields, it was found that 11 years was the average age of more than half the child-workers. The average working day was usually between 9 and 10 hours. The children thinned out small plants, hoed, pulled up mature beets of from 2 to 8 or 9 pounds, and cut off the beet tops. Cuts to legs and knees were not infrequent and occasionally a child cut off a finger. Most of the children who were examined by the hygiene division had postural deformities and malpositions apparently due to strain. Only 7 per cent of the labourers were native born Americans. Most of the labourers were transients, many of them coming for the beet season from Mexico. The living accommodation of the transients was poor, often overcrowded and unsanitary. The proportion of children engaged at beet-work who were retarded at school was 20 to 30 per cent higher than among the non-employed children. Children of resident owners showed less retardation than those of transient labourers. The resident children who worked were absent from 30 to 60 per cent of the

school days, while in the transient labourers' families the children sometimes left school in the early spring and did not return until November or December. A summer session conducted for beet workers had not enabled the children to make the progress they would have done in an uninterrupted term.

In Texas, about 60 per cent of all white mothers were reported to have worked in the cotton fields at some time during the year, especially in the picking season, about 40 per cent working 10 hours or more per day. A greater percentage of negro mothers worked, and their working hours averaged longer. Practically every child over ten worked in the field at least a month or two in the year; more than half of these worked 10 hours a day and sometimes 12 hours. In from 7 to 9 per cent of the white families, and in one-third of the coloured families one or both parents were illiterate. Overcrowding also existed in these homes.

A survey of the coal-mining camps of West Virginia showed one-eighth of the mothers and a greater number of the fathers and other chief wage-earners to be illiterate. Three-fifths of the families were native white and one-fourth were negroes. About 85 per cent of the children under 16 years were in school. Only one-fifth of the boys and 4 per cent of the girls of from 13 to 16 years of age had regular work, the mines being unable to legally employ boys under 16 and there being only domestic service for the girls. Seven-tenths of the school children were, however, from one to six years below the normal grade of their age. The schools were found to be unfitted to take advantage of the fact that children in the district were not employed, the school term was short, the school equipment was inadequate and the teachers young, untrained and inexperienced. The home life did not afford much opportunity for development of the children. The camps were in isolated districts. Only one per cent of the miners own their homes and 93.5 per cent live in homes owned by the mining

companies. Only 8 per cent of the families had been 10 years or more in the community. Many of the families were large and the earnings of the heads of households are less than \$1,850 a year (two-fifths earning less than \$1,450) whereas the average cost of mere subsistence of a miner's family in 1919 was estimated at more than \$1,750.

The report emphasized the need for a thorough scientific study of the occupations open to young persons and the effects upon their health and strength especially where there are laws providing that children shall be physically fit

for the occupations. The need for providing family homes for children deprived of the care of their families was also emphasized. Forty states were reported to have laws providing for some form of special assistance to children in need of aid because of the death, disability, incarceration, or desertion of the father. It was stated that studies were under way to determine the status of mothers' pension administration, to form a basis for improved standards of administration, to secure information with regard to the adequacy of aid and the special measures taken to promote the welfare of children.

BRITISH SCHEME FOR OVERSEA SETTLEMENT

ACCORDING to a recent despatch, out of a total of 16,000 ex-service men given transportation to the dominions under the British scheme for oversea settlement, approximately one-third have come to Canada. A number of these have secured employment through offices of the Employment Service.

This scheme of oversea settlement was inaugurated by the British Government on the recommendation of an Oversea Settlement Committee appointed after the close of the war to deal with the question.* In addition to recommending the granting of free passages as a reward for their service in the war to ex-service men and women and their dependants desirous of emigrating to other parts of the Empire, the Committee suggested state aid for the emigration of women, and for supplementing the existing provisions for the emigration of juveniles. In April, 1919, the Committee's proposals with regard to the grant of free passages to ex-service men were accepted by the Government.

Under this scheme, as at present in operation, ex-service men and women and their dependants, who wish to settle within the Empire overseas, may obtain free third-class passages at the lowest Government rate to the nearest convenient port to their destination, providing they are approved under one of the agricultural settlement schemes of the oversea government or are going to assured employment and are otherwise acceptable to that government. Applications receiving the approval of the Oversea Settlement Office are forwarded to the representative of the oversea government concerned. In the case of Canada, for instance, it is the Superintendent of Emigration for Canada at London who decides whether the applicant is in all respects acceptable to his government.

With regard to the emigration of women, the Oversea Settlement Committee succeeded in effecting the formation of an organization known as the Society for the Oversea Settlement of British Women and composed of representatives of the various societies interested in the settlement of women overseas. This organization assists the Government in the selection, departure

*Reports of Oversea Settlement Committee (Great Britain):

Report for 1919 [Cmd. 573], February, 1920.

Report for 1920 [Cmd. 1134], February, 1921.

and supervision on the voyage of women emigrating to the dominions, and for this purpose receives an annual grant from the state of £7,500. During 1919 representatives of the Oversea Settlement Office were sent to Canada, Australia and New Zealand for the purpose of inquiring into and reporting on the prospects of suitable openings for women.

In dealing with industrial employment overseas an arrangement was effected with the Canadian Government, under which information regarding vacancies which cannot be filled by Canadian labour is forwarded to the Oversea Employment Branch of the British Ministry of Labour, which refers persons available under the oversea settlement schemes who are qualified to fill the vacancies in question.

In the winter of 1921 the Government held a conference with the dominion governments principally concerned for the purpose of discussing the possibility

of initiating a system of state-aided settlement within the Empire. At this conference proposals were formulated for consideration at the Conference of Prime Ministers and Representatives of the United Kingdom, the Dominions and India to be held during the following summer. These proposals embodied a comprehensive policy of Empire land settlement and Empire-directed emigration, involving an annual contribution on the part of the British Government up to a maximum of £2,000,000. At the conference in the summer these proposals were considered by a special committee and a resolution was finally adopted by the conference, expressing satisfaction with the proposals. With the exception of South Africa, the representatives of the dominions offered their co-operation, subject to parliamentary sanction, in the development of schemes based on these proposals but adapted to the particular circumstances and conditions of each dominion.

EMPLOYMENT CONDITIONS IN CANADA FROM OCTOBER 9, 1921, TO JANUARY 15, 1922, AS REPORTED BY EMPLOYERS

EMPLOYMENT during the period October 9—January 15, showed a distinctly unfavourable tendency; the downward movement increased in force until the end of the year and was only slightly checked by the comparatively weak reaction recorded during the first fortnight in 1922. The curve of employment in the accompanying chart rose almost imperceptibly during the first fortnight of the quarter and the index number of employment on October 22 stood at 90.4, the highest point attained since the middle of January, 1921. In November, however, the winter contraction of industry set in and employment declined steeply until on December 31 the index number stood at 77.9, reaching a new low level. The recovery recorded during the following two weeks as indicated above was far from complete, the index number on January 15 standing at 80.6

as compared with 90.4 for the corresponding fortnight of last year.

Returns received by the Dominion Headquarters of the Employment Service of Canada from some 5,600 employers showed the following net changes:—

Fortnight ending	Increase in staff	Decrease in staff	Percentage of Change
Oct. 22, 1921...	5,971		.87
Nov. 5, 1921...	994		.14
Nov. 19, 1921...		9,729	1.38
Dec. 3, 1921...		9,460	1.37
Dec. 17, 1921...		12,276	1.81
Dec. 31, 1921...		53,138	8.07
Jan. 15, 1922...	18,955		3.05

There was a net decline in the staffs of the firms making returns of 58,683 workers during the 14 weeks under review. Of this number, over 36,000 persons were released from employment by Ontario

and Quebec concerns. In the Prairie provinces the contractions reported affected approximately 12,000 employees, while the reductions in payrolls in the Maritime provinces and British Columbia were on a smaller scale.

The most pronounced expansion in employment during the quarter under review was recorded by firms in the logging group, who enlarged their working forces by over 7,200 persons. Ontario absorbed the larger share of this increase, but there was also some improvement in the situation in Quebec. In the pulp and paper group increased activity was indicated, although the gains in employment were considerably smaller than those recorded in logging. Continued expansion was reported in the leather group in Quebec and Ontario, the boot and shoe firms making returns adding nearly 600 workers to their payrolls. Employment in this group continued to be in larger volume than during the corresponding period of last year. The mining of metallic ores showed an increase in British Columbia. A minor gain in employment on the whole was registered by rubber factories, the improvement in this group being confined

to the early part of the quarter. The production of wood distillates and extracts afforded more employment on the whole during the quarter.

Very decided declines in employment were recorded in railway construction and maintenance during the three months under review, from which almost 17,000 workers were released, largely in Ontario and the Prairie provinces. This shrinkage was a seasonal movement and approximated that reported during the same period of 1920 and 1921. Sawmills also continued to show pronounced decreases in employment, but furniture works on the whole were busier than during the preceding quarter. Confectionery, sugar, chocolate and biscuit factories recorded important losses and canneries continued to release employees. Employment in the iron and steel group showed a distinctly downward movement during the whole period; the closing of the railway car and other shops for holidays, inventories and other purposes caused very marked shrinkage at the end of December. Employment in the crude, rolled and forged division of the industry also suffered heavy losses. During the first two months of the quarter

NOTE.—The curve shows the percentage of employees actually at work on the last day of each half month as reported by the firms making the returns, based on the number of employees reported by the same firms on January 17, 1920.

there was steady expansion in employment in the textile industry, the thread, yarn, cloth, hosiery and knitting branches, especially, showing activity. During December, however, the tendency was downward and the improvement recorded early in January was not sufficient to restore employment to the level it had attained during the autumn. Tobacco factories showed the decided losses in staffs usual to the December and January holidays and inventories though the movement during October and November was also downward. There was considerably less activity in coal mining in Nova Scotia and British Columbia, but in the Alberta coal fields the situation showed improvement. Building contractors reported the declines incidental to the autumn and winter, and highway construction, mainly in Ontario, afforded employment for a much smaller number of men than during the preceding quarter. The transportation group as a whole was considerably slacker, the losses in the railway and shipping and stevedoring divisions being particularly heavy. Employment on street and electric railways was in lesser volume also. The decided expansion recorded in retail trade owing to Christmas buying during November and December was counterbalanced by the

equally large reductions in sales force reported in the early part of January. Telephones and telegraphs afforded less employment, particularly the former. Glass, brick, cement, soap, electrical apparatus, electric current, musical instrument, brass, bronze, copper and baking powder factories and petroleum refineries registered reductions in employment, though the losses were somewhat less pronounced than those recorded above. While practically all provinces shared in the declines reported in the various groups for the quarter under review, the contractions in Ontario and Quebec in most cases exceeded those indicated elsewhere.

At the end of the period under review employment in leather, edible plant, rubber, fur and textile factories and in street railway and cartage and shipping and stevedoring divisions was in greater volume than during the same period of last year. All other groups reported less activity, operations being especially curtailed in pulp and paper, non-ferrous metal products, communication, and construction and maintenance.

A summary of employment conditions during the period December 18 to January 15 appears also in the regular monthly article on page 123 of this issue.

UNEMPLOYMENT IN TRADE UNIONS DURING THE QUARTER ENDED DECEMBER 31, 1921, AS REPORTED BY UNIONS MAKING RETURNS

THE present article on unemployment among the members of local trade unions deals with the situation reported during the quarter ending December 31, 1921. The unemployment registered at the close of October was 7.4 per cent of the membership reported, or slightly over one per cent less than in September; during November and December, however, the improvement noted during the

preceding month was not maintained and the situation gradually became less favourable until at the close of December the percentage of idleness stood at 15.1. For the corresponding period of 1920 the percentage had stood at 13.1. (Unemployment as used here has reference to involuntary idleness due to economic causes. Persons occupied in work other than their own trades, or who are idle

because of sickness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the unions reporting.) Employment in manufacturing, transportation, and building construction declined steadily during the quarter, the contraction in the last two indicating to some extent seasonal dullness. There was, however, increased activity in mining particularly in the coal fields in Alberta.

The accompanying chart shows the curve of unemployment as reported by trade unions by quarters for 1916-17-18 and by months for 1919-20-21. Unemployment declined constantly from March, 1921, until October, the per-

centage at the end of October being only 7.4 as compared with 16.5 at the end of March. From October, however, unemployment increased steadily, although at the end of December it was not as pronounced as during the period from February to May. Conditions during the whole of 1921 compared very unfavourably with those registered during the preceding year.

During the quarter under review the situation in the Maritime provinces was on the whole better than in other provinces. Quebec and British Columbia reported particularly large percentages of idleness. On the whole, there was less activity in every district than during October, November and December of the preceding year, although unions in the Maritime provinces, Ontario and Alberta indicated less slackness for the period under review than at the end of Decem-

ber, 1920. Table I on this page summarizes the returns by provinces, and Table II on page 221 shows the percentages of unemployment reported in the different groups of industries.

Unemployment in the manufacturing and mechanical industries during October was only about 1 per cent higher than in the corresponding month in 1920. The metal, food, textile and printing trades were not so busy, but considerable improvement was reported for garment and leather workers. Trans-

portation, mining and building construction afforded decidedly less employment; and fishermen, lumber workers and loggers were a great deal slacker.

During November, unemployment in the manufacturing group increased by over 6 per cent, mainly on account of inactivity for workers in the metals, textiles, pulp and paper industries. Leather and glass workers also registered higher percentages of idleness than during November of 1920. The clothing trades recorded practically the same percentage of unemployment, while the situation reported by workers in the food, jewelry and printing groups showed improvement. Transportation workers were slightly less fully employed and in the mining group there was a large increase in slackness. Tradesmen in the building and construction industries reported about 5 per cent more unemployment. Fishermen continued to indicate a very much less favourable situation. On the other hand, the percentage of idleness reported by lumber workers and loggers was considerably smaller than that registered at the end of November, 1920.

Numerous shutdowns over Christmas and New Year's Day materially affected employment in the manufacturing industries during December, the slackness being particularly marked in the metal trades. Workers in the printing group reported considerably more idleness than in December, 1920, but textile, pulp, paper and leather workers were a great deal busier. Transportation, especially steam railways, afforded much less employment; mining, fishing, lumber working and logging also were not active. On the other hand, unions in building construction reported a

smaller percentage of unemployment, although the change was very slight.

The accompanying tabulations (table III) show in some detail the returns for the month ending December 31, for which 1,520 unions with an aggregate member-

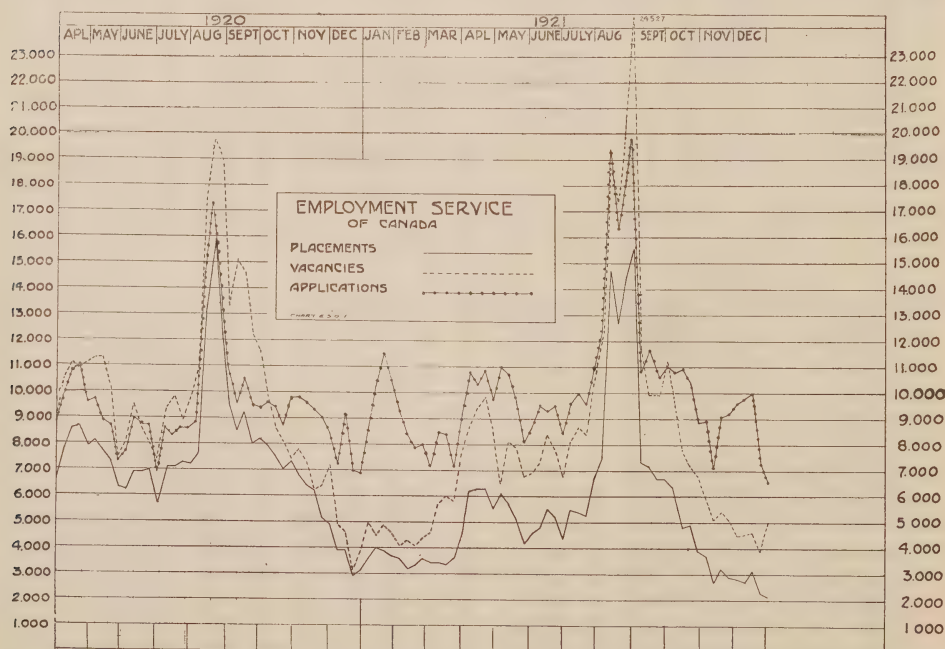

ship of 161,085 persons reported 24,311 of their members as unemployed, a percentage of 15.1. The table also gives the general percentages of unemployment in the various trades and industries for October and November.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA DURING THE PERIOD SEPTEMBER 26—DECEMBER 31, 1921

THE volume of business transacted by the Offices of the Employment Service of Canada during the period September 26—December 31, 1921, was considerably less than during the corresponding period of 1920. Applications for employment showed a slight increase over the report of last year, but in vacancies offered there was a reduction of more than ten per cent and in place-

ments in regular employment a contraction was shown of approximately 35 per cent.

The accompanying chart, which is based on the weekly returns from the offices, shows that at the end of September, 1921, applications and vacancies were at a level higher than at the same time in the preceding year. Placements and vacancies, although marked by con-

siderable fluctuations, declined rapidly, the curve of placements falling to a point during December considerably lower than at any time since March, 1919. Vacancies, however, did not drop to the low level of the preceding year and during the last week of the year showed a slight recovery from the decline during Christmas week. During the first months of the period under review applications also showed a considerable reduction, followed by an increase during the early part of December, but during the last two weeks of the year a slight falling off in registration was evident.

During the period under review the offices reported that 52,737 placements (44,823 of men and 7,914 of women) were effected, as compared with 81,750

during the corresponding period of 1920. Placements in casual employment during the period were 20,450 as compared with 19,253 during the corresponding period of last year. Employers notified the Service of 87,308 vacancies (of which 63,551 were for men and 23,757 for women) as compared with a total of 97,664 during the same period of 1920. The number of applicants registered for employment at the office during the quarter was 128,045 (of which 102,958 were of men and 25,087 of women) as compared with 124,020 during the corresponding period of 1920.

A summary in detail of the six weeks from November 21 to December 31, 1921, may be found on page 124.

EMPLOYMENT IN THE BUILDING TRADES AS INDICATED BY BUILDING PERMITS ISSUED DURING OCTOBER-DECEMBER

EMPLOYMENT in the building trades as indicated by the value of building permits issued in 56 cities registered a decrease during the quarter ending December 31, 1921, as compared with the previous three months. In comparison with the corresponding quarter in 1920 a substantial increase was shown. October reported a decline of slightly over 7 per cent in the value of permits issued as compared with September; the value for November, however, was more than 18 per cent above that for October, but in December a decrease of nearly 54 per cent was reported as compared with November. The amount for December, therefore, was considerably less than that recorded

in October. The total value of the permits issued during the quarter stood at \$25,278,652 as compared with \$29,786,589 for July, August and September and with \$19,672,317 in the last three months of 1920. This represented a decrease of slightly over 15 per cent in the former comparison and an increase of nearly 29 per cent in the latter.

During October, 1921, Quebec, Saskatchewan and British Columbia registered increases as compared with October of the preceding year, the gain of \$1,651,968 in the first named being the largest. This expansion in the province of Quebec was chiefly due to increased activity in building operations in Montreal, Quebec city and Westmount. Of

the losses reported elsewhere that of \$1,-370,528 in Ontario was the most noteworthy, although considerable decreases occurred also in Nova Scotia and Manitoba.

During November, Nova Scotia, Quebec, Ontario and Alberta reported expansion in the value of permits issued as compared with November, 1920. Quebec, with an increase of \$5,561,763, showed the most substantial gain, indicating greatly increased activity in building operations in Montreal. The contraction of \$139,302 recorded in Manitoba was the most pronounced; of this decline Winnipeg reported nearly 89 per cent.

An increase of almost 9 per cent in the value of building authorized was reported in December as compared with the same month of the preceding year. Quebec and Ontario were the only provinces to record gains in that comparison. Toronto issued permits valued at \$2,100,490, an increase of 88 per cent over December of last year. The most pronounced contraction was reported in British Columbia where the value of permits issued dropped from \$947,230 in December, 1920, to \$528,802 in December, 1921, a difference of 44.2 per cent.

A comparison in some detail between the statements for December and those for November may be found on page 125 of this issue.

The accompanying table shows, in detail, the value of building permits issued by months for the third quarter of this year. The thirty-five cities for which a continuous monthly record has been kept since 1910 are marked by asterisks.

ESTIMATED COST OF BUILDING WORK AS INDICATED
BY BUILDING PERMITS

FAIR WAGE CONTRACTS, JANUARY, 1922

DURING January the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to eight fair wage contracts, of which seven were awarded by the Department of Public Works, and one by the Department of Railways and Canals. All the contracts contained the usual fair wage clause which provides for the prompt payment of such wages as are current in the district in which the work is to be performed, and for observance on the various works under contract of the prevailing hours of labour, and which otherwise prevents abuses and secures the legitimate rights of the labour employed.

A statement was also received as to supplies ordered by the Post Office Department, subject to the Regulations for the Suppression of the Sweating System, the securing of fair wages, etc.

DEPARTMENT OF PUBLIC WORKS.

Contract for sinking of an Artesian Well, Lawlor's Island, (Quarantine Station) N.S. Name of contractor, The Trask Artesian Well Co., Ltd., Berwick, N.S. Date of contract, January 5, 1922. Amount of contract, \$9 per foot, depth not less than 150 ft.

Repairs, renewals, chipping, scrapping and painting of steel hopper scow No. 157, Departmental Dredging Fleet, Maritime Provinces. Name of contractor, The Sydney Foundry and Machine Works, Ltd., Sydney, N.S. Date of contract, January 11, 1922. Amount of contract, \$6,900.

Repairs to wharf, Port Washington, North Pender Island, B.C. Name of contractor, The Vancouver Pile Driving and Contracting Co., Vancouver, B.C. Date of contract, January 6, 1922. Amount of contract, unit prices.

Reconstruction of South Breakwater, Cobourg, Ont. Name of contractor, H. A. Croft, Cobourg, Ont. Date of contract, November 1, 1921. Amount of contract, \$3,500, and unit prices.

Construction of wharf, Ganges, B.C. Name of contractor, The Vancouver Pile Driving and Contracting Company, Vancouver, B.C. Date of contract, January 6, 1922. Amount of contract, unit prices.

Repairs, renewals, etc., to steel hopper scow No. 107, Departmental Dredging Fleet, Maritime Provinces. Name of contractor, A. McMillan and Heighton, New Glasgow, N.S. Date of contract, January 10, 1922. Amount of contract, \$4,950.

Electric wiring and fitting in Public Building, Walkerton, Ont. Name of contractor, Harris Bros., Lucknow, Ont. Date of contract, January 19, 1922. Amount of contract, \$1,475.

DEPARTMENT OF RAILWAYS AND CANALS.

Manufacture, supply and erection of two highway steel swing bridges at the upper entrance of the Lachine Canal. Name of contractor, Dominion Bridge Company, Ltd. Date of contract, January 30, 1922. Amount of contract, \$26,600 each bridge.

POST OFFICE DEPARTMENT.

The following is a statement of payments made in January for supplies ordered by the Post Office Department, subject to the Regulations for the Suppression of the Sweating System, the securing of fair wages, and the performance of work under sanitary conditions:

Nature of Orders	Amount of Orders
Making metal dating stamps and type, and other hand stamps and brass crown seals.....	\$1,051.86
Making and repairing rubber stamps, daters, etc.....	401.24
Supplying mail bag fittings.....	2,607.76
Making up and supplying letter carriers' uniforms, etc.....	26,701.55
Repairing letter boxes, etc.....	8.20
Making and supplying stamping ink, pads, etc.....	406.19
Satchels.....	2,394.13
Scales repaired.....	205.00

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Similar agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees, but verbal agreements are also included in the records, the latter being schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In the case of each agreement the dates of wages for principal classes of Labour are given, with other information of general interest.

Coal Mining

VANCOUVER ISLAND, B. C. — AGREEMENTS BETWEEN DIFFERENT COAL MINING COMPANIES AND THEIR EMPLOYEES. CANADIAN COLLIERIES (DUNSMUIR) LIMITED, AND EMPLOYEES IN AND AROUND COMOX MINES. Agreement effective from November 1, 1921, to October 31, 1923.

Company to give employees such employment as convenient and expedient; employees to accept such employment subject to conditions of the agreement.

Company to pay its employees a day bonus subject to the fluctuations of cost of living as determined by the Cost of Living Commission established under the

Department of Labour at Ottawa, and at present acting in this field.

System of dockage inspection to be continued. In event of dismissal for excess refuse, party dismissed may appeal to the District Superintendent, decision to be final.

A miner taken from the face and required to perform day work, to receive miner's day rate. When Company has no work at the face a miner electing to perform day work temporarily to be paid regular day work wage.

An agreement committee to be elected to represent underground and surface employees. Management of Company and Agreement Committee to meet monthly and in special meetings. Disputes, suggestions, etc., to be laid before the Management by the members of the agreement committee. Pending hearing and adjustment of disputes or grievances, no stoppage of work to take place.

Mine operation not to be suspended in event of a fatal accident. Employees if attending funeral of victim of accident to do so upon their own time.

Representatives to be elected in October, 1923, by units represented on agreement committee to negotiate a new agreement with the company.

To the earnings of each employee there is added the bonus mentioned above, which fluctuates quarterly according to changes in the cost of living. The bonus

at the time of signing of the agreement, October 20, was \$1.22 per day; this was reduced on November 1 to \$1.15 per day, and on February 1 to 85 cents per day.

The rates of pay per day for men on day wages for the principal classes are as follows: — Underground: Handpick miners, not on contract rates, \$4.20; machine runners (coal cutting), \$4.55; timbermen, tracklayers, bratticemen, driver bosses, double drivers, head cagers, machine runners' helpers, \$4.20; timbermen's helpers, single drivers, pushers, rope riders, pumpmen, mechanics' helpers, labourers, \$3.85. On the surface: hoistmen, \$5.07; blacksmiths, \$4.39; blacksmiths' helpers, \$3.04-\$3.37; picking tablemen, lampmen and labourers, \$3.37; machinists, \$4.64; carpenters. \$4.20.

A similar agreement is in effect over the same period in the Extension and South Wellington Mines in the Lady-smith-Wellington Field.

The Canadian Western Fuel Company has a somewhat similar agreement with its employees in effect from October 1, 1919, until September 30, 1922. This agreement provides for bonuses to cover the high cost of living, which are to continue in effect until the cost of living is reduced in like amounts. The bonus in effect as from November 1, 1921, was \$1.10 per day.

Manufacturing Iron

GUELPH, ONT. — CROWE'S IRON WORKS, LTD., AND INTERNATIONAL IRON MOULDERS' UNION, No. 212. Agreement effective from July 1, 1921, to July 1, 1922.

Hours of work and shop conditions to be same as during the past year.

Minimum Wage: Per day—journeymen, moulders and coremakers, \$5.75. Piecework moulders (bench) to be paid the Board Price of their work plus 27½ per cent of the board price. Prices paid for piano plates to be adjusted on basis of \$6.88 per moulder per day, each

pattern to be a 6-up, 7-up, or 8-up, according to what it has been during the past year.

KINGSTON, ONT.—LOCAL EMPLOYERS, AND SHEET METAL WORKERS, LOCAL 117. Agreement effective from March 9, 1921.

Wages: per hour, 80 cents. Hours per week 44. Overtime, until 10.30 p.m. and Saturday afternoon, time and one-half. Thereafter and Sundays and holidays, double time.

Printing and Publishing

SYDNEY, N.S.—CERTAIN LOCAL JOB OFFICES AND SYDNEY TYPOGRAPHICAL UNION No. 460. Agreement to be in effect from January 1, 1922, to January 1, 1923.

Agreement is identical with the one formerly in effect as summarized in the LABOUR GAZETTE for August, 1921, page 1043, with the following additions.

Starting with the third year, apprentices to be required to take the course of lessons in printing provided by the International Typographical Union, and cards for fourth and fifth years not to be granted until apprentices have passed examinations showing that their workmanship entitles them to promotion. On completion of the course, each apprentice on receiving the diploma to be granted by local union half the cost of course.

After six months, wage scale not to be binding; negotiations may be reopened with view to readjustment. Change if made not to exceed ten per cent.

SYDNEY, N.S. — NEWS OFFICES AND SYDNEY TYPOGRAPHICAL UNION, No. 460. Agreement to be in effect from January 1, 1922, to January 1, 1923.

Wages: Per week—handman operators—day shift, \$32; night shift, \$35. Hours, per day, 8; per week, 48.

In other respects, including the additional clauses as given above, the agreement is similar to that for job offices.

Pulp and Paper

MERRITTON, ONT. — LINTON PAPER MILLS COMPANY, LIMITED, AND INTERNATIONAL BROTHERHOODS OF PULP, SULPHITE AND PAPER MILL WORKERS, PAPER MAKERS, STATIONARY FIREMEN AND OILERS AND MACHINISTS. Wage scale effective November 21, 1921, with 30 days' notice of change.

See the LABOUR GAZETTE for October, 1921, page 1305, for wage scale effective August 16, 1921. On November 21, 1921, a cut of 5 cents per hour was effective in wages of sulphite workers, with the exception of wages of firemen and head fireman which remained the same.

New schedule for paper makers, per hour — machine tender, 72 and 80 cents; back tender, 55 and 60 cents; third hand, 48 and 50 cents; fourth hand, 45 cents; beater engineer, 58 and 68 cents; boss calender man, 63 cents; calender runner, 58 cents; calender helper, 45 cents; calender boy, 30 cents; cutter boy, 34 cents; labourers, tour, 45 cents, day, 42 cents; finishers and winders, 54 cents; counters, 30 cents; learners and sealers, 25 cents; millwrights, 65 cents; helpers, 50 cents; electricians 60 cents; engineer, 65 cents; fireman, 55 cents; engine oilers, 53 cents; coal passers, 45 cents; yard boss, 55 cents; wrinkle machine, 62 cents; finisher, 50 cents; bag room — experienced girls, 30 cents; non-experienced, 25 cents; bag machine runners, 54 cents; yards boss, 55 cents.

THOROLD, ONT.—ONTARIO PAPER COMPANY, LIMITED, AND INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS AND OTHER ORGANIZATIONS. Agreement in effect from September 25, 1921, to May 1, 1922.

Any question of jurisdiction coming up between the unions to be decided by the American Federation of Labour.

Permanent employees inside the mill to maintain membership in good standing in the proper union, company to assist in bringing this condition about.

Union men to be hired when available and new employees not union men to

become so within fifteen days from date of starting work. Men laid off, if older in point of service, when efficient, to have preference of re-employment.

Paper mills to operate six days per week; pulp mills, six to six and one-half days when pulp is needed, and longer when mutually necessary. During Sunday shutdowns, work on paper machines to be limited to cleaning, oiling and repairs.

“Rules governing mill employees” as issued by the Company to become part of agreement.

No strikes or lockouts during period of this agreement. All parties signing the agreement to endeavour to bring about a condition of maximum production.

Wages: Per hour—on machines, according to machine—machine tenders, 73 cents to \$1.25; back tender, 93 cents, to \$1.12; third hand, 69 to 77 cents; fourth hand, 61 to 65 cents; fifth hand, 58 cents; sixth hand, 50 cents; oilers, 50 cents; helper, 44 to 58 cents; winder-man, 66 cents; cleaners, 44 cents; head beaterman, 90 cents; mixers and beaterman, 47 cents; beltman, \$1.04. Boss machine tender, on machines Nos. 1, 2, 3 and 4, \$337.50 per month; on No. 5, \$315 per month. When changed to give one boss Nos. 1, 2, and 3, he shall receive \$330 per month, and man on Nos. 4 and 5, \$320 per month.

Wages: Per hour—Electrical: electricians, 70 to 86½ cents; helpers, 46 to 61 cents; apprentice, 35 cents; maintenance men and operators, 70 cents. Ground-wood mill: tour foreman, per week, \$43.32, others, per hour—repair men, 69 cents, repair helper, 54 cents; stone sharpeners, 60 cents; carriers, 46 cents; oilers, 49 cents; grinder men, 54 cents; screen men, 49 cents; waste men, 44 cents; wood pullers, 47 cents. Sulphite mill—cooks, 75½ cents; helpers, 53 cents; acid makers, 70 cents; screen men, 49 and 63 cents; stonemen, 53 cents; millwrights, 71 and 84 cents; labourers, 44 cents. Finishing room: head finisher, per week, \$42.20; others,

per hour—finishers, 49 cents; weighers, 58½ cents; loaders, 49 cents; core men, 49 cents; cutter operator, 58½ cents.

Foreman (steam plant), head machinists (machine shop), \$1.08; firemen, 49-59 cents; turbine operators, 71 and 80 cents; machinists, 67½ and 84 cents; apprentices, 38 and 40 cents; pattern maker, 87 cents; millwrights, 67 to 84 cents; oilers, head, 71 cents; others, 49 and 57 cents; steamfitters, foreman, 95 cents, others, 66 and 77 cents. Wood room barkers' foremen, 58 and 68 cents; chippermen, 57 cents; drum barker men, 47 cents; knife barkers, 50 cents; labourers and cleaners, 44 and 47 cents. Yard: foremen, 63 and 82 cents; teamsters, labourers and cleaners, 40 to 57 cents.

Building and Construction

NIAGARA FALLS, ONT.—CERTAIN LOCAL BOSS PAINTERS, AND PAINTERS, DECORATORS AND PAPERHANGERS No. 631. Agreement in effect from April 1, 1921, to April 1, 1922.

Hours of labour, eight per day. When in shifts, hours not to exceed eight in twenty-four.

Overtime, in case of necessity only, time and one-half. Holidays, double time. No work on Labour Day or Dominion Day.

Only union men to be employed if available, this applying to paperhangers, grainers, signpainters and all journeymen affiliated.

Instructions to be received only from boss painter, foreman, painter or superintendent of painting job.

Minimum rate: Per hour, for 1921, 70 cents; on bridge or high structural iron work, 75 cents; sign writers, trade grainers and free hand fresco painters,

75 cents. Transportation to be paid to journeymen working out of city.

One apprentice to every shop employing two or more men; all apprentices to be indentured.

Contractor to submit grievances in writing to the shop steward.

In case of trouble on any job where painters are at work, no member of union to be called off until business agent, with boss painters, tries to adjust the same. Grievance or violation of rules to be submitted to a "joint committee of contractor, business agent and executive board."

REGINA, SASK.—ASSOCIATION OF CONSTRUCTIVE INDUSTRIES, AND BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA, No. 1867. Agreement to be in effect from June 1, 1921, to March 1, 1922, with two months' notice of change. Hours per week, fifty—nine hours per day with five on Saturdays.

Wages: Per hour—85 cents. Where two shifts are necessary, second shift not to be considered overtime except where two are worked continuously. Overtime from 5 p.m. until midnight, and from noon until 5 p.m. on Saturdays, time and one-half. Thereafter, and Sundays and holidays, double time. Any night shift from 10 p.m. to 7 a.m. time and one-quarter.

Travelling time, and expenses for a job not exceeding two weeks to be paid to men.

Cases of violation of agreement, to be submitted to a joint committee composed of three members of each party, findings to be final.

Members not to take part in any sympathetic strike unless ordered to do so by International Headquarters.

PRICES, RETAIL AND WHOLESALE, IN CANADA, JANUARY, 1922

THE prices movement again showed little change, the retail cost of foods being only slightly higher in January than in December, while the index number of wholesale prices which had risen in December fell back to the same level as in November.

In retail prices the average cost of a family budget of twenty-nine staple foods in some sixty cities was practically unchanged at \$11.03 for January as compared with \$11.00 for December, \$14.48 for January, 1921; \$15.30 for January, 1920; \$13.78 for January, 1919; \$12.42 for January, 1918; and \$7.73 for January, 1914. Including the cost of fuel and of rent with that of food, the figures were as follows: \$21.52 for January, 1922; \$21.49 for December, 1921; \$25.30 for January, 1921; \$24.15 for January, 1920; \$21.73 for January, 1919; \$19.80 for January, 1919; and \$14.49 for January, 1914.

In wholesale prices the index number was down to 227.7 for January as compared with 230.7 for December and 227.3 for November, 281.3 for January, 1921; 336.4 for January, 1920; 286.5 for January, 1919; 258.7 for January, 1918; and 136.5 for January, 1914. The chief changes for the month were increases in the animals and meats group, with decreases in the dairy group, in fruits and vegetables, in miscellaneous foods, in miscellaneous building materials and in house furnishings.

Other index numbers of wholesale prices in Canada show fluctuations rather than a tendency upward or downward in the movement. The index number of Professor Michel rose from 160.0 for the end of November to 161.9 for the end of December, falling to 158.4 at the end of January. The Bank of Commerce index number of prices of goods mainly exported rose from 143.43 for December 15 to 147.17 for January

15, the first movement upward it had shown since last August, and due to higher prices for wheat, cattle, and hogs. The index number of goods mainly imported, however, was lower, falling from 148.10 for December 15 to 147.88 for January 15, due partly to improvement in exchange for Canadian funds at New York.

A special index number of wholesale prices in Canada, covering 50 important commodities only, based upon prices in 1913 = 100, was down to 148.0 for January as compared with 150.1 for December, 147.2 for November, 147.7 for October, 150.4 for September, 158.0 for August, 153.3 for July, 154.1 for June, 159.5 for May and 260.5 for May, 1920, when the peak was reached.

The table of retail prices and rentals shows the prices at the beginning of January of over one hundred staple foodstuffs, groceries, coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these have been published each month since the beginning of 1910, the figures being secured at the middle of each month by the

correspondents of the LABOUR GAZETTE resident in each locality from dealers who did a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915, when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts exclusively occupied by workingmen. The first class is of houses in good condition, favourably located in more such districts, with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease)

in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the difference in quality. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc.; so that the comparative expenditure would be little changed.

The index number of wholesale prices is based on the quotations for 271 commodities and is the simple average of the percentages of current prices of the several commodities in relation to the average prices for the base period, 1890-1899, these being therefore made equal to 100. The quotations for most farm products are obtained weekly and averaged for the month; the quotations for other commodities are taken for the middle of the month. The table of index numbers shows the changes by groups

RETAIL PRICES OF STAPLE FOODS, GROCERIES, FUEL AND LIGHTING

*December only.

and sub-groups for the previous month and for the corresponding months back to 1913.

Retail Prices

Sirloin steak was slightly higher, averaging 27.3c. per pound as compared with 26.7c. in December, and 35.7c. in February, 1921, being higher in all the provinces except Nova Scotia and Prince Edward Island. Round steak was 0.4c. per pound higher and rib roast 0.7c.. Shoulder roast and stewing beef were 0.5c. higher. Veal was practically unchanged in the average. Mutton averaged 25.6c. per pound as compared with 24.3c. in December and 32.2c. in February, 1921, being slightly higher in all the provinces. Lamb averaged 29.8c. as compared with 27.8c. in December and 37.2c. in April, 1921. Fresh pork was practically unchanged in the average. Breakfast bacon averaged $\frac{1}{2}$ c. per pound lower. Boiled ham averaged 59.6c. as compared with 69.3c. in December and 74.8c. in January, 1921. Fresh fish showed little change. Fresh whitefish were up slightly in Ontario and Quebec.

Fresh eggs averaged 71.2c. per dozen as compared with 67.7c. in December and 85.2 in January, 1921. Cooking eggs averaged 58.7c. as compared with 56.2c. in December and 75.7c. in February, 1921. Milk averaged slightly lower, being down at Amherst, Orillia, and Edmonton, but slightly higher at Three Rivers and Belleville. Dairy butter averaged slightly lower, being down in all the provinces except Alberta and British Columbia, where prices averaged slightly higher. Dairy prints averaged $\frac{1}{2}$ c. per pound higher. Creamery butter averaged 48.6c. per pound as compared with 48.0c. in December and 63.6c. in January, 1921, the prices being slightly higher in the Eastern provinces. Oleomargarine averaged 29.9c. as compared with 29.3c. in December and 42c. in January, 1921. Cheese was practically unchanged. Bread averaged slightly lower, being down in Amherst, Sherbrooke, Thetford Mines, Saskatoon, and Nelson, but higher at

Medicine Hat. Flour and rolled oats averaged very slightly lower. Corn meal and pearl barley averaged the same as in December. Rice and tapioca showed very little change. Canned vegetables were unchanged. Onions averaged slightly higher. Potatoes showed little change in any of the provinces. Fresh apples averaged slightly higher. Dried fruits showed little change. Jam and canned fruits were practically unchanged. Granulated sugar averaged 9.2c. per pound as compared with 9.5c. in December, 10c. in August, 12.8c. in April, and 12.3c. in January, 1921. Tea and coffee showed little change in the average. Cream of tartar averaged slightly lower. Anthracite coal averaged \$17.53 per ton as compared with \$17.62 in December and \$20.00 per ton in January, 1921. Bituminous coal averaged \$11.46 as compared with \$11.61 in December and \$14.74 in January, 1921. Hard wood averaged \$12.83 as compared with \$12.97 in December and \$14.49 in January, 1921. Coal oil averaged 31.7c. per gallon as compared with 31.6c. in December and 40.3c. in January, 1921. Rent was higher at St. Hyacinthe.

Wholesale Prices

GRAINS AND FODDER.—Wheat, No. 1 Northern at Winnipeg had fallen to \$1.12 per bushel at the beginning of the month but reached \$1.19 in the last week, and the market showed signs of further increases. Barley at Winnipeg was down to 54c. per bushel at the beginning of the month but reached 56 $\frac{3}{8}$ c. in the last week. Oats advanced from 42c. to 45c. per bushel. Flaxseed had improved during December and continued to rise during January, reaching \$1.94 per bushel in the last week. Bran and shorts were \$1.00 higher at \$28.00 and \$30.00 per ton respectively, at Toronto.

ANIMALS AND MEATS.—At Winnipeg the best cattle advanced from \$5.50 per hundred pounds to \$7.00 but fell in the last week to \$6.25. At Toronto butcher cattle rose from \$6.25 to \$7.50 per

(*) Preliminary figures. (†) Nine commodities off the market, fruits, vegetables, etc. One line of spelter was dropped in 1915.

hundred pounds. Beef was unchanged at the higher price reached at the end of December. Hogs at Toronto rose from \$10.50 to \$11.75 per hundred. Dressed hogs advanced from 15c. per pound to 16c. Bacon declined at the end of December and during January decreased further from 28c per pound to 26c. Barrelled pork advanced from \$30.00 per barrel to \$31.00. Fowl advanced from 25c. to 30c. per pound at Montreal and turkeys from 47c. to 52c.

DAIRY PRODUCTS. — Butter, finest creamery fell at Montreal from 38c. per pound to 34c. Dairy butter at Toronto fell from 35c. to 32c. Fresh eggs at Montreal fell from 70c. per dozen to 50c. Storage eggs at Toronto fell from 50c. per dozen to 35c.

FISH.—The export market for dried and smoked fish showed some improvement, but continued weak for shipments to Europe and South America.

FRUITS AND VEGETABLES. — Apples, winter, were up to \$7.50-\$9.00 per barrel at Toronto. Lemons and oranges were slightly lower but evaporated apples were firmer. Potatoes were steady while beans and onions were firmer. Canned tomatoes were down to \$1.65 per dozen.

MISCELLANEOUS FOODS.—Soda biscuits were lower at 13c. per pound. Tapioca was lower at 7½c. per pound. Flour was steady. Chocolate was lower at 26c. per pound. Sugar was down 60c. per cwt. at \$7.29 at Toronto. Salt fell 10 per cent. Baking soda was ½c. per pound lower at 3c.

TEXTILES.—A line of yarn declined 5c. per pound. Raw cotton was again

slightly higher. Cotton goods also averaged higher. Raw silk, both Japan and Italian, advanced. Spool silk advanced 10 per cent. Jute advanced 5 per cent. Table oilcloth declined 60c. per piece. Flax sewing twine was slightly lower.

HIDES, LEATHER, BOOTS, AND SHOES.—Tallow was down 1c. per pound. Upper leather fell from 35c. per pound to 33c.

METALS AND IMPLEMENTS.—Pig iron declined \$2.00 per ton. Galvanized sheets were lower. Steel billets declined \$1.00 per ton. Lead was lower at 7c. per pound. Crow bars were lower at 8c. per pound.

FUEL AND LIGHTING.—Anthracite coal was 50c per ton lower at Montreal at \$13.75. Coke at the ovens fell from \$3.50 per ton to \$3.00. Calcium carbide was \$10.00 per ton lower.

BUILDING MATERIALS.—Pine shipping culls, hemlock, and spruce were lower at Ottawa. Cement, building paper, soil pipe, iron pipe, nails, hinges, copper wire and galvanized wire were lower. Turpentine advance 10c. per gallon.

HOUSE FURNISHINGS.—Common kitchen chairs were lower. Crockery declined 10 per cent.

DRUGS AND CHEMICALS.—Bleaching powder fell 25c. per cwt. and soda ash 15c. per cwt.

MISCELLANEOUS.—In raw furs, muskrat skins were higher by 5c. each. Newsprint paper was down from 4c. per pound to 3¾c. Rubber was down from 21c. per pound to 20¼c. Laundry soap fell from \$7.10 per box to \$6.75. Laundry starch fell from 7¾c. to 6¾c.

PRICES IN THE UNITED KINGDOM AND IN OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movement of prices in other countries as compared with Canada.

The index numbers of retail prices which are listed are from official sources unless otherwise stated. The authorities for the wholesale price index numbers are named in all cases.

United Kingdom

WHOLESALE PRICES.

The Board of Trade index number of average prices for December (taking prices for 1913 as 100) was 171.4 as compared with 176.4 for November, a decline of 2.8 per cent. All groups were lower than in November except the meat, poultry and fish group. The three food groups show a fall of 2.1 per cent. For industrial materials a fall of 3.2 per cent is shown. During the second half of 1921, food prices fell nearly 19 per cent, and industrial materials about 13 per cent, prices in the iron and steel group falling 28.5 per cent, and other metals and minerals nearly 20 per cent. The general average of wholesale prices for the year 1921 as compared with the year 1913 was 201.2.

The *Times* index number of wholesale prices of 60 commodities had fallen to 162.1 on December 31. This is 35.2 per cent below the level of December 31, 1920, and 62 per cent above the average for 1913—the base year. The total fall from the peak of April, 1920, is 54 per cent.

COST OF LIVING.

At the beginning of January the official index number of retail prices of foods comprised in the food budget was about 85 per cent above the level of July, 1914. As compared with the previous

month there was a decline of about 5 per cent, mainly due to reductions in the prices of bread, flour, meat, butter and eggs. The index number for all items of cost of living at January 1 was about 92 per cent above the level of July, 1914. This showed a decrease of about 3.5 per cent during the month of December.

At the beginning of February the cost of the food budget showed a still further decline and stood at 79 per cent above the figure for July, 1914, a decrease of about 3.2 per cent for the month. The index numbers of other items in the cost of living are: rent, 155; clothing, 250; fuel and light, 220; sundries, 195; all items, 188.

France

A comparison of the official index number of wholesale prices for the month of December, with the average for 1913, shows an increase of about 225 per cent in the number representing prices of all commodities. The percentage decrease in December from the figures for November is nearly 2 per cent. The three food groups show a decrease of nearly 3 per cent and the three industrial groups of about one per cent.

Germany

COST OF LIVING.

During the period from November to December the official index number of cost of living increased 11 per cent. In the month under review, more than in the previous months, the costs of heat and light contributed to the increase, rent advancing only in a few districts. For foods alone the index number increased 9.1 per cent. The general increase in cost of living was less marked in agricultural regions than elsewhere.

India**COST OF LIVING.**

The official index number of retail prices in Bombay for December shows a decline of 1.6 per cent from the level of November, which places it 7 per cent below the peak reached in October, 1920. All food articles declined during the month about 1.6 per cent. Fuel and lighting remained the same, and clothing declined nearly 3 per cent.

New Zealand**WHOLESALE PRICES.**

The official index number of wholesale prices in October showed a decline of nearly one per cent from the level of the previous month, which is a decline of about 12.3 per cent from the peak reached in October, 1920. During the month under review there were slight increases in the coal and leather groups and in flour, bran, etc., and decreases in all other groups.

COST OF LIVING.

The official index number of retail prices of foods, taking the average for 1909-13 as 1000, declined 49 points or 2.3 per cent from October to November, 1921. This leaves the level of prices in November 51.87 per cent above that of July, 1914.

United States**WHOLESALE PRICES.**

The preliminary index number calculated by the Bureau of Labour Statistics of the United States stands on the same level for December as for November. There was a slight decline for farm products, foods, cloths and clothing and for chemicals and drugs, while there were correspondingly slight in-

creases for fuel and lighting, for building materials and for miscellaneous commodities. No change was reported for metals and metal products or for house-furnishing goods.

Gibson's average index number of prices for 22 articles of food for January (monthly average) was 64.3, a rise of nearly 2 per cent from the previous month, which, it will be remembered, was about 2 per cent above the average for November.

Dun's general index number for February 1, was \$164,974, an increase of 3 per cent from the previous month. While advances occurred in four of the seven groups, the only change of importance was a rise of about 8 per cent in meats.

Bradstreet's general index number for February 1, was \$11,4190, a gain of four-tenths of one per cent over that for January 1, which showed a gain of one per cent over December. This brings the general index up 7.4 per cent from the June 1, 1921, number, but it is still 7.7 per cent below February 1, 1921, and 45 per cent below the peak of February 1, 1920.

COST OF LIVING.

The index number of retail food prices for the United States, issued by the Bureau of Labour Statistics, showed a decrease of 1 per cent from November 15 to December 15. Of the 43 articles of food comprised in this index, 30 decreased in price, the chief decreases being in pork chops, evaporated milk and oranges, 5 per cent; lard, 4 per cent; bacon, ham, potatoes and granulated sugar, 3 per cent; butter, bread, flour, corn meal, tea and raisins, 2 per cent. Six articles increased in price, the chief increases being in cabbage, 11 per cent; onions, 7 per cent; leg of lamb, 6 per cent; storage eggs, 4 per cent; strictly fresh eggs, 1 per cent. For the year-

a. Average for year. b. Quarter beginning in specified month. c. 230 commodities, 1890-1909: 272. 1910-1914: 271. 1915-1921. New index number for 1920 and 1921 is joined to old index number (33 commodities) and all converted to base 1913=100. (e) The commodities comprised in these two new index numbers are in the one case articles chiefly exported, in the other case articles chiefly imported.

period, December 15, 1920, to December 15, 1921, the percentage decrease in all articles of food combined was 16 per cent. The price of onions increased 95 per cent; cabbage, 50 per cent; oranges, 2 per cent. The prices of all other articles decreased.

The cost of living index number for Massachusetts for the month of January was 157.3, the average for 1913 being taken as 100. This shows a drop

of 1.4 per cent for January. The group index numbers which made up the January average were as follows: food, 136.1; clothing, 180.1; shelter, 162.5; fuel, 174.9; sundries, 178.0.

The following table shows the changes in the cost of living in the United States from 1913 to December, 1921. These figures are a summarization of the figures in 32 cities, computed on a 1913 base.

IMMIGRATION DURING THE FOURTH QUARTER OF 1921

THE following statements compiled from information furnished by the Department of Immigration and Colonization give details as to the total immigrants into Canada during the fourth quarter of 1921. For purposes of comparison the figures for the previous quarter and for the corresponding quarter of 1920 are also given.

The table on page 251 gives the nationality, sex, occupation and destination of all immigrants who entered Canada during the quarter under review:—

FATAL INDUSTRIAL ACCIDENTS REPORTED DURING THE FOURTH QUARTER OF 1921

THE Department has received reports of 226 fatal industrial accidents that occurred during the fourth quarter of 1921. (Information has also been received of 22 additional fatalities that occurred previously in the year, one of which occurred in the first quarter, one in the second, and 20 in the third quarter making a total of 245 accidents for the third quarter.) Of the fatalities during the last quarter, 81 occurred in October, 82 in November and 63 in December, while in the corresponding quarter of 1920 there were reported 107 for October, 112 in November and 91

in December. The distribution of accidents according to industries showed 44 in the steam railway service, 37 in building and construction, 27 in lumbering, 24 in the mines, smelters and quarries, and 15 in the metals, machinery and conveyances group. Thirteen accidents occurred as a result of being caught in shafting, gears, belts, etc., and 11 were due to falls from trains.

The following statement does not necessarily include all the fatal industrial accidents that may have occurred but has been prepared from information received from all sources available.

FATAL INDUSTRIAL ACCIDENTS DURING THE FOURTH QUARTER OF 1921

Trade or Industry.	Locality.	Date.	Age.	Cause of fatality.
METALS, MACHINERY AND CONVEYANCES—				
Workman at steel plant.....	Sydney, N.S.....	Oct. 2	Bursting of a turbine.
Workman at foundry.....	Hamilton, Ont.....	" 11	Crushed under casting.
Workman at sheet metal plant.....	Oshawa, Ont.....	" 15	64	Fell into tank—burned.
Steamfitter at foundry.....	Montreal, Que.....	" 22	32	Fall of pipe.
Grinder at iron works.....	Oshawa, Ont.....	" 26	46	Struck by piece of emery wheel.
Watchman at machine plant.....	Barrie, Ont.....	" 26	Fell over casting.
Car repairer.....	Vancouver, B.C.....	" 31	55	Fell from roof of car.
Workman at foundry.....	Guelph, Ont.....	Nov. 5	Overcome by gas and smoke.
Motor mechanic.....	High River, Alta.....	" 14	over 21	Gasoline tank exploded.
Workmen at car shop, (2).....	Revelstoke, B.C.....	Dec. 1	39, 49	Struck by revolving crane handle.
Workman at wire plant.....	Hamilton, Ont.....	" 1	36	Burned.
Machinist.....	Montreal, Que.....	" 8	42	Fell from engine.
Employee at metal factory.....	Welland, Ont.....	" 19	39	Fell into hot lime vat.
Labourer at steel plant.....	Hamilton, Ont.....	" 28	55	Caught in gears of machine.
FOODS, TOBACCOS AND LIQUORS—				
Employee at flour mill.....	Haileybury, Ont.....	Nov. 9	Caught in unprotected shaft.
Employee at mill.....	Lanark, Ont.....	" 18	Caught in shafting.
Wall washer at dairy.....	Montreal, Que.....	" 2	42	Fell from scaffold.
Employee at cannery.....	Aylmer, Ont.....	Dec. 21	45	(No particulars) Leg broken.
PULP, PAPER AND FIBRE—				
Machine man at paper factory.....	Port Arthur, Ont.....	Oct. 7	Caught in shafting.
Workman at paper factory.....	Atikokan, Ont.....	" 7	Drowned.
Employee at paper mill.....	Woodland, N.B.....	" 15	58	Killed by water wheel—While adjusting a nut water was turned on.
Swamper with pulp company.....	Onaping Lake, Ont.....	Dec. 13	Struck by tree.
Employee at paper mill.....	Grand'mere, Que.....	" 16	Crushed between cylinders.
Employee of pulp mill.....	East Angus, Que.....	" 23	Struck by wood from pile.
Workman at pulp mill yard.....	Weymouth, N.S.....	" 27	Caught between cars.
PAINTS, OILS, CHEMICALS AND EXPLOSIVES—				
Labourer.....	Guelph, Ont.....	Nov. 6	Over 21	Burned; overcome by fumes from fire in japan room.

FATAL INDUSTRIAL ACCIDENTS DURING THE FOURTH QUARTER OF 1921.—Continued.

Trade or Industry.	Locality.	Date.	Age.	Cause of fatality.
STEAM RAILWAY SERVICE—				
Trainman	Kenebec, Ont.	Oct. 1	22	Fell between cars.
Trainman	Petawawa, Ont.	" 20		Fell from train.
Switchman	Rainy River, Ont.	" 3		Struck by engine.
Conductor	Indian Cove Mine, N.S.	" 6		Box car slipped; internal strain.
Yard Foreman	Lambton, Ont.	" 8	33	Fell from train.
Employee	Komoka, Ont.	" 10	50	Struck by train.
Sectionman	Near Rosevear, Alta.	" 11	32	Train struck hand car.
Fireman	Near Dufresne, Man.	" 16	34	Derailment.
Employee	Near St. Charles, Man.	" 17		Rear-end collision.
Yard foreman	Moose Jaw, Sask.	" 18	25	Fell while throwing switch.
Employees (4)	Mountain Sub., B.C.	" 20	34, 33, 46, 58	Roof of tunnel caved in.
Workman	Hunt, Ont.	" 21	22	Jumped from train.
Sectionmen, (2)	Swift Current, Sask.	" 25	30, 35	Struck by train.
Sectionman	Ducks, B.C.	" 25		Struck by engine.
Sectionman	Second sub-div., B.C.	" 25		While spiking ties was struck in abdomen by end of spike.
Engineer and fireman, (2)	Geikie, Alta.	Nov. 2	46, 26	Derailment due to rock slide.
Track watchman	Thompson, B.C.	" 6	35	Train struck velocipede on curve.
Employee	Mile 26, Portman, B.C.	" 7		Bank slid causing cave-in of tunnel.
Brakeman	Antikokan, Ont.	" 8	30	Struck by train.
Agent	Fort William, Ont.	" 12	62	Struck by train.
Foreman	St. Hyacinthe, Que.	" 12	22	Hand car struck by train.
Employee	St. Hyacinthe, Que.	" 19	37	Struck by train.
Engineer	Algoma, Ont.	" 16	38	Explosion.
Gateman	Toronto, Ont.	" 17		Struck by train.
Brakeman	Bredenbury, Sask.	" 20	23	Run over by train.
Sectionman	Saskatoon, Sask.	" 20	23	Struck by train.
Labourer	Agincourt, Ont.	" 23	59	Struck by train.
Yardman	Calgary Terminals	" 29	25	Fell while attempting to board moving engine.
Brakeman	Woodstock, Ont.	Dec. 3	30	Collision.
Sectionman	Lachute Sd., Que.	" 5	20	Hand car struck by train.
Switchman	Port Arthur, Ont.	" 5	40	Slipped under car.
Brakeman	Forest, Ont.	" 6		Fell off car.
Brakeman	Swan River Stn., Man.	" 12		Slipped when getting off engine.
Brakeman	Weymouth, N.S.	" 27		Caught between car and engine.
Trainman	St. John, N.B.	" 19	32	Run over by train.
Trainman	St. John, N.B.	" 21	58	Fell off icy train.
Yard foreman	Vancouver, B.C.	" 7	45	Crushed between car and platform.
Yard foreman	St. John, N.B.	" 18		Fell between cars.
Conductor	Toronto, Ont.	" 22	34	Crushed by car.
ELECTRIC RAILWAYS—				
Watchman	Toronto, Ont.	Dec. 13	50	Struck by street car.
Conductor	Toronto, Ont.	" 21		Crushed between car and wall.
Switchman	Winnipeg, Man.	" 28		Struck by automobile.
TRANSPORTATION—				
Millwright at elevator	Fort William, Ont.	Oct. 4		Caught in shafting.
Labourer with cartage company	Hamilton, Ont.	" 4	32	Thrown from car.
Teamster	St. John, N.B.	" 20	24	Struck against overhanging scale.
Longshoreman	Montreal, Que.	Nov. 2		Fell into hold of boat.
Longshoreman	Montreal, Que.	" 7	47	Arm caught in gangway when hoisting.
Longshoreman	Montreal, Que.	" 7		Fell into hold of boat.
Labourer at elevator	Fort William, Ont.	" 10	47	Caught in shafting.
Labourer at elevator	Port Colborne, Ont.	" 15	42	Drowned.
Teamster	Lumsden, Sask.	" 21	47	Horses ran away.
Employee at dry dock	Port Dalhousie, Ont.	" 22		Drowned; fell from ladder of boat.
Driver for dairy	Montreal, Que.	" 30		Fell down elevator shaft; entered through open door.
Driver	Quebec, Que.	Dec. 12	Over 21	Crushed by weight of load which upset.
Workman at elevator	Port Arthur, Ont.	" 23	48	Crushed; fell on belt.

FATAL INDUSTRIAL ACCIDENTS DURING THE FOURTH QUARTER OF 1921.—*Continued.*

Trade or Industry.	Locality.	Date.	Age.	Cause of fatality.
NAVIGATION—				
Fireman.....	At sea (Pacific).....	Oct. 8	23	While changing burner omitted to turn off oil.
Labourer with steamship company..	Toronto, Ont.	" 15	35	Struck by bale.
Oiler on steamship.....	Montreal, Que.....	" 22	35	Drowned between wharf and ship.
Schooner crew (7).....	Between Sydney, N.S., and St. Johns, Nfd.....	Nov. 23	Wreck.
Deckhand.....	At sea (Pacific).....	Dec. 11	Caught in shaft.
Mate.....	Bella Bella, B.C.....	" 23	32	Fell into hold of steamer.
MINES, SMELTERS AND QUARRIES—				
Electrician at mine.....	Stellarton, N.S.....	Oct. 4	Over 21	Electrocuted—put hand on iron bracket while cutting wire.
Miner.....	Florence, N.S.....	" 13	Fall of coal.
Rope rider.....	Cassidy, B.C.....	" 14	27	Crushed between car and post.
Mucker.....	Cobalt, Ont.....	" 17	32	Fall of rock.
Mucker.....	Britannia Beach, B.C.....	" 28	26	Struck by piece of pulley.
Superintendent at quarry.....	Guelph, Ont.....	" 27	35	Struck by rock from blast.
Car shunter.....	Springhill, N.S.....	" 26	Head caught while lowering gondola under screen.
Loader.....	Drumheller, Alta.....	" 26	Over 21	Fall of rock.
Miner.....	Joggins, N.S.....	Nov. 2	Electrocuted.
Mine examiner.....	Sydney, N.S.....	" 7	Explosion—crushed under rock.
Miner.....	Minto, N.B.....	" 10	26	Thrown under car when pipe used to set brake broke.
Miner.....	Mountain Park, Alta.....	" 14	Over 21	Cave-in.
Miner.....	Montague, N.S.....	" 20	29	Struck on head by cage.
Miner.....	Coal Creek, B.C.....	" 25	52	Struck by runaway cars.
Helper.....	Cassidy, B.C.....	" 16	34	Struck by falling rock.
Shaftman.....	S. Porcupine, Ont.....	" 28	36	Fell down shaft.
Driller.....	East Broughton, Que.....	" 30	Fall of rock in asbestos pit.
Miner.....	Dominion No. 2, N.S.....	Dec. 3	Fall of coal.
Miner.....	Timmins, Ont.....	" 6	34	Struck by hoist.
Mine captain.....	Kirkland Lake, Ont.....	" 12	36	Fall of rock.
Miner.....	Aerial, Alta.....	" 29	Over 21	Fall of rock from roof.
Miner.....	Mountain Park, Alta.....	" 30	30	Crushed between cars.
Smelterman.....	Trail, B.C.....	" 23	37	Fell into bin; suffocated.
Employee at smelter.....	Anyox, B.C.....	" 29	Delayed blast.
BUILDING AND CONSTRUCTION—				
Labourer.....	Toronto, Ont.....	Oct. 6	60	Crushed foot; infection.
Labourer.....	Westmoreland Co., N.B.....	" 7	45	Fell from staging.
Workman in trench.....	Vancouver, B.C.....	" 10	Scalded by steam.
Workman with contractor.....	Smithville, Ont.....	" 21	Explosion.
Bricklayer.....	Moncton, N.B.....	" 7	45	Staging gave way when cement blocks slid from wall.
Painter.....	Vancouver, B.C.....	" 10	Fell from scaffold.
Painter.....	New Glasgow, N.S.....	" 6	50	Collapse of scaffold.
Painter.....	Toronto, Ont.....	" 22	43	Overcome by fumes while painting inside an oil storage tank.
Carpenter with railway company...	Komoka, Ont.....	" 10	Struck by train.
Carpenter.....	Tisdale, Sask.....	" 14	32	Collapse of scaffold.
Road foreman.....	Kitchener, Alta.....	" 17	Over 21	Runaway team.
Superintendent.....	St. John, N.B.....	" 16	40	Struck by falling boom.
Workman.....	Montreal, Que.....	Nov. 2	56	Fell into a shaft.
Workmen (2).....	Owen Sound, Ont.....	" 8	Building collapsed while being torn down.
Workman.....	Spuzzum, B.C.....	" 12	Fell from bridge.
Bridge carpenter.....	Whitcourt, Alta.....	" 12	Over 21	Fell off trestle bridge.
Carpenter.....	Jansen, Sask.....	" 11	50	Fell from roof.
Carpenter.....	Pembroke, Ont.....	" 11	63	Fell from roof.

FATAL INDUSTRIAL ACCIDENTS DURING THE FOURTH QUARTER OF 1921—*Continued.*

Trade or Industry.	Locality.	Date.	Age.	Cause of fatality.
BUILDING & CONSTRUCTION—Cont'd.				
Rigger with power commission.	Queenston, Ont.	Nov. 2	28	Fell from gravel chute.

Trade or Industry.	Locality.	Date.	Age.	Cause of fatality.
AGRICULTURE—				
Gardener.....	Quebec, Que.	Oct. 5	60	Fell from a tree.
Farmer.....	Westwood, Ont.	" 5	64	Horse ran away.
Farmer.....	Champlain Village, Que.	" 6	75	Gored by a bull.
			Over	
Farmer.....	St. Anselin, Que.	" 24	21	Struck by branch from tree.
Farmer.....	Near Clair, N.B.	Nov. 3		Caught in tractor.
Farmer.....	Oak River, Man.	" 3		Caught in belt of separator.
			Over	
Farmer's helper.....	St. Agapit, Que.	" 7	21	Caught in belt of saw.
Farmer.....	Makamik, Que.	Dec. 19		Drowned; ice on lake broke under weight of load.
Helper at straw-cutting.....	St. Lazare, Que.	" 14		Hand caught in machine; loss of blood.
FISHING AND HUNTING—				
Fisherman.....	Esquimalt, B.C.	Oct. 1	55	Drowned.
Fishermen, (2).....	Banks of Newfoundland	" 29		Drowned.
MISCELLANEOUS—				
Sprayer.....	Vancouver, B.C.	Oct. 10	36	Stepped back off stage and fell into hold.
Labourer.....	Vancouver, B.C.	" 11	30	Burned by steam.
Labourer.....	Fielding Road, C.B.	" 12		Fell while opening dam gate.
Mill worker.....	Kent Co., N.B.	" 17	18	Whirled around shaft.
Prospector.....	Ymir, B.C.	" 18	65	Struck by boulder from mountain side.
Mill contractor.....	Nairn, Ont.	" 25	49	Caught in machine.
Watchman and labourer (2).....	Britannia Beach, B.C.	" 28	46, 34	Drowned when dam burst.
Mill worker.....	Gloucester Co., N.B.	Nov. 2	22	Skull fractured (cause unknown).
Driller.....	N. Vancouver, B.C.	" 17	52	Struck by falling plank.
Sweeper at factory.....	Fort William, Ont.	" 17	47	Caught in shafting.
Engineer.....	Powell River, B.C.	" 25	36	Making landing; drowned.
Labourer.....	Near Evansburg, Alta.	" 25		Caught by railway car.
Engineer.....	White Rock, B.C.	Dec. 19	29	Riding in jitney, struck by train.
Shop labourer.....	Port Mann, B.C.	" 25	47	Moving driving tyre which fell.
Labourer.....	Sydney, N.S.	" 3		Crushed between boiler frame and crane.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING THE FIRST THREE QUARTERS OF 1921.

Labourer.....	North Vancouver, B.C.	Mar. 15	47	Crushed against casing box by timber swung on rolls.
Lineman.....	Montreal, Que.	June 27	29	Electrocuted.
Porter.....	Prescott, Ont.	July 7	31	Fell off train.
Firefighter.....	Vernon, B.C.	" 30	62	Fell down mountain side.
Carpenter with railway company.....	Fort Erie, Ont.	Aug. 8	56	Fell off scaffold.
Hatchery keeper.....	Terrace, B.C.	" 8		Drowned.
Labourer.....	Montreal, Que.	" 9	47	Crushed under freight car.
			Over	
Miner.....	Mountain Park, Alta.	" 17	21	Fall of coal from roof.
Bricklayer.....	Woodfibre, B.C.	" 27	28	Gassed by steam and acid from blow-pipe.
Sectionman.....	Windsor, Ont.	" 31	51	Struck by train.
Labourer.....	Greenwood, B.C.	Sept. 30	62	Thrown on rock by scraper.
Labourer.....	Idco, B.C.	" 30	39	Fell from roof of building.
Hatchery keeper.....	Owl Creek, B.C.	" 27	50	Drowned.
Chokerman.....	Ocean Falls, B.C.	" 30		Struck by swinging log.
Logger.....	Kwatna Camp, B.C.	" 30		(No particulars).
Truck driver.....	Hamilton, Ont.	" 6	30	Burned by gas.
Labourer with lumber company.....	Warton, Ont.	" 15	48	Struck by tree.
Workman at beverage plant.....	Toronto, Ont.	" 16	41	Cut hand; infection.
Workman.....	Montreal, Que.	" 22	38	Burned; fire in varnish.
Sea captain.....	Georgetown, P.E.I.	" 25	72	Drowned.
Telephone employee.....	Gloucester Co., N.B.	" 26	44	Fell from wagon.
Sawmill worker.....	Markdale, Ont.	" 28		Crushed under ties

RECENT LEGAL DECISIONS AFFECTING LABOUR

THE four legal decisions summarized below relate respectively to a claim for damages for inexcusable fault in Quebec, an action brought in Saskatchewan for the death of an employee in British Columbia, and two cases in courts of the United States, one of which had reference to wages due to a non-unionist, and the other to an injunction against

certain employers to restrain them from violating an industrial agreement. On pages 200 to 204 of this issue is given the complete text of two important judgments delivered by Nova Scotia courts arising out of an application for an injunction to restrain certain coal companies from reducing wages.

Employer not guilty of inexcusable fault in placing an inexperienced man on an unguarded machine

An employee was placed by his foreman on the work of feeding a machine with material which passed between two rollers moving in opposite directions. About half an hour after he began this work both his hands were caught between the rollers and crushed. He brought an action in the Superior Court of Quebec against the Company, his employer, claiming \$25,000 damages on the ground of inexcusable fault. The employer admitted responsibility and offered to pay the injured workman the capital sum of \$2,500 with costs, but contested the balance of the claim, denying the charge of inexcusable fault. The Superior Court decided in favour of the plaintiff and awarded him \$17,500 damages.

The employer appealed against this decision and the case was heard in the Court of King's Bench. The grounds for the charge of negligence alleged by the injured workman against his employer were as follows: (1) Having employed an inexperienced man on a very dangerous job, without giving him any previous instruction. (2) Having put in operation a dangerous ma-

chine not equipped with safety appliances. (3) Providing no effective means for stopping the machine. (4) Providing no one to oversee or to help him. (5) The floor was in a dangerous condition. (6) A similar accident had taken place before. (7) All these facts were known by the higher officials of the Company.

It was held by the Court that there was no inexcusable fault on the part of the defendant Company. There was no hidden or unseen danger connected with the machine, and there were no quickly revolving wheels. The only danger to be avoided in the work was apparent. With regard to the absence of safety appliances, the Provincial Inspectors of industrial establishments had never suggested the provision of additional facilities for stopping the machine or of any protective guard in front of the rollers. With regard to failure to give the plaintiff enough help, it was shown that the usual number of workmen were engaged in the work. The condition of the floor did not constitute inexcusable fault on the part of the employer. It could not be urged that because there

had been one similar accident some time previously, that it was inexcusable fault to continue to operate this machine.

The Court therefore held in its judgment that the acts, negligence or fault charged against the Company defendant, even if established, did not amount to inexcusable fault, and declared that

the sum rendered by the Company was good and sufficient. The Court dismissed the action and demand of the plaintiff for any surplus with costs in both courts.

(*Quebec — Canadian Consolidated Rubber Company vs. Belanger.*)

Action for damages forbidden where accident occurs cannot be maintained elsewhere

A locomotive engineer was killed in the province of British Columbia when on duty. His widow soon afterwards left British Columbia and took up her residence in Saskatchewan. She there brought an action against the railway company for the death of her husband under the Fatal Accidents Act of Saskatchewan. The jury returned a verdict in favour of the widow, and in answer to a question found that the accident was caused by the negligence of the Company in not keeping a bridge in repair. The judge, however, dismissed the action, holding, as the plaintiff was domiciled in British Columbia at the time of the accident, that the British Columbia Workmen's Compensation Act gives the Workmen's Compensation Board exclusive jurisdiction in the matter. The widow appealed against this decision, and the case was heard in the Court of Appeal of Saskatchewan. It was held by the Court that as the accident occurred in the province of British Columbia it must first be established that the wrongful act or neglect would have been actionable in Saskatchewan if death had not ensued and the act had been done in Saskatchewan.

That was held to be clearly established. It was necessary, however, to consider to what extent the deceased would have been affected in prosecuting his claim in Saskatchewan by the law of British Columbia. The deceased was employed in an industry within the scope of Part I of the British Columbia Workmen's Compensation Act, and this Act provides that for any accident occurring in such industry the liability to pay compensation is that of the Board and not that of the individual employer. It is further expressly stated that "no action against the employer shall lie in respect of such accident." These were statutory conditions attached to the contract of employment made by the deceased as a resident of British Columbia in that province.

Had the deceased lived, he could not therefore have maintained any action for damages, and consequently neither could his widow maintain an action either under the Saskatchewan or British Columbia laws. The appeal was therefore dismissed.

(*Saskatchewan — Walpole vs. Canadian Northern Railway Co.*)

Non-unionist awarded wages below union scale by United States Court

A non-union carpenter in Cleveland, Ohio, was hired to put up some partitions. When the work was completed the employer refused to pay him on the ground that his bill was too high. Suit was brought by the carpenter in the Municipal Court of Cleveland. The

evidence at the trial showed that there had been no agreement as to wages, and the only testimony regarding wages was to the effect that the union scale for carpenters in that district was \$1.25 per hour.

By decision of the Court the carpenter

was only allowed \$1.10 per hour, because he was not a member of the Carpenters' Union and therefore he was not entitled to the union scale. This decision was based on the following grounds:

The non-union man not having contributed in any way to the securing of the union scale was, as a matter of justice, not entitled to the same wages as one who had by his thought, time and money aided in securing the union scale. The second ground was because

where a union man is employed to do a certain line of work in a community where there is a well known and established rate for that work which has been agreed upon as the just rate for a member of that union working in that district, then there is an implied contract that the union man shall receive the scale from whoever employs him in that line of work. But that does not apply to a non-union man because he has not brought himself within the class to which the rate applies.

Employers enjoined from violating an unexpired agreement with union

Last November, the Cloak, Suit and Skirt Manufacturers' Protective Association of New York announced their intention to introduce a piecework wage system and a forty-eight hour week. This was in alleged violation of an agreement with the International Ladies' Garment Workers' Union which was to continue operative until June 1, 1922. This step led to a strike of 55,000 cloakmakers on November 14. On behalf of the Union application was made in Court for an injunction restraining the Association or any of its members from violating the agreement. A temporary injunction was granted in December, and on January 11, the injunction was made permanent by order of Mr. Justice R. F. Wagner of the New York State Supreme Court. The order was as follows:

"The motion is granted enjoining *pendente lite* defendants herein, their and each of their agents, servants and attorneys, and each and all of their several members, and every officer, director and representative of every corporate member thereof, and all persons acting in aid of or in conjunction with them, or any of them, including members of the said The Cloak, Suit and Skirt Manufacturers' Protective Association, from combining and conspiring in any way, to order, direct, instigate, counsel, advise or encourage the members of

The Cloak, Suit and Skirt Manufacturers' Protective Association, or any of them, to cease performing or to violate the agreements of May 29, 1919, and June 3, 1921, made between the said The Cloak, Suit and Skirt Manufacturers' Protective Association and the International Ladies' Garment Workers' Union and the Joint Board of Cloakmakers' Union of the City of New York, and from doing or sanctioning any act in furtherance or support of such conspiracy; from ordering, directing, instigating, counselling, advising or encouraging such members of the said The Cloak, Suit and Skirt Manufacturers' Protective Association, or any of them, to abrogate and discontinue the provision of said agreement for the system of week work in their establishments prior to June 1, 1922, or to increase the hours of labour in their establishments above 44 hours per week until the said 1st day of June, 1922; from supporting, aiding or assisting members of The Cloak, Suit and Skirt Manufacturers' Protective Association, or any of them, in any effort to abrogate the existing contract as to the week-work system or increase the labour hours in their establishments by money contributions or in any other manner whatsoever; from expelling from membership in the said The Cloak, Suit and Skirt Manufacturers' Protective Association, fining or other-

wise punishing, disciplining or discriminating against such members of the said association as may agree with the International Ladies' Garment Workers' Union and the Joint Board of Cloakmakers' Union of the City of New York, or either of them, to resume work in their establishment upon the terms as to the system of work, hours of labour or otherwise, of the agreements between the parties of May 29, 1919; from doing or continuing any act in furtherance of the conspiracy above set forth by means of speech, writing, meeting or any other method, and from taking any steps whatsoever to put into execution or to retain in force and effect the aforesaid resolution

of the said The Cloak, Suit and Skirt Manufacturers' Protective Association, adopted on the 25th day of October, 1921. And for taking any action for the carrying out of said resolution or any of the purposes thereof, and they are required to abrogate the same and to cease acting thereunder or under any similar resolution, or from taking or continuing in any concerted action involving the violation or repudiation of said agreement of May 29, 1919, or any of the terms thereof."

(New York State—International Ladies' Garment Workers' Union vs. The Cloak, Suit and Skirt Manufacturers' Protective Association.)

V.—RATES OF WAGES AND HOURS ON STEAM RAILWAYS.....	
22	
ADDENDUM ON WAGES AND HOURS IN COAL MINING.....	
23	

Rates of Wages and Hours of Labour in Canada, September, 1920, and September, 1921

THE present bulletin, which is the third of a series on wages and hours of labour in Canada, is intended to bring down to date of September, 1921, on a more extended basis, information regarding the trend of wages and hours of labour in Canada which had been contained in Reports, No. 1 and No. 2.

The first bulletin covered the period from 1901 to 1920, and contained rates of wages and hours of labour in thirteen cities of Canada for a selected number of building, metal, and printing trades, and for the most important class of electric railway employees, conductors and motormen. It also contained tables of wages of typical classes of steam railway operating employees, while a number of samples of rates for common labour in factories, for miscellaneous factory trades and for employees in the lumbering industry were listed, to illustrate the trend of wages in these classes of occupations during the ten-year period of 1911-1920.

The second bulletin gave statistics for September, 1920, and June, 1921. Steam railway employees were omitted because their rates of wages and conditions of employment had not changed during the period under review. The statistics in the supplementary tables in Report No. 1 on factory labour and employees in the lumbering industries were not published for June. On the other hand, the number of building and metal trades included was increased, a new class, electric linemen, was added to electric railway employees, and several miscellaneous occupations were added, while the number of cities for which rates were listed was increased from thirteen to twenty-seven.

The present bulletin serves to indicate increases or decreases in rates of wages or hours, from September, 1920, to September, 1921. The sources of information are of the same character as in the first two bulletins, namely, returns from employers, trade unions, signed agreements in force, and in some cases reports from Departmental officers and correspondents. So far as possible, data for 1921 are of the same nature and from the same sources as for 1920. Where no one predominating rate could be found in the returns received, the ranges of representative rates appear. In some instances, where at September, 1921, conditions, chiefly in the printing trades, were uncertain owing to the fact that an appreciable number of the men engaged in a trade were on strike, foot-notes appear. Where September rates were not available those for the nearest month for which figures were available have been inserted, also indicated by foot-notes.

Table I covers the same localities as Report No. 2 issued as a supplement to the September issue of the LABOUR GAZETTE. It also covers practically the same classes, but the number of printing trades has been increased, also the num-

ber of classes in the group of electric railways, light and power. Three classes of civic employees have been added. Thus there are 32 classes instead of 27 as in Report No. 2. It was not found feasible to separate electric railways from light and power, owing to the fact that electric linemen and electricians (*i. e.* power-house) are found in both industries, and also that in many cities, the operation of electric railways and light and power, is conducted as a single industry.

In the building trades, plasterers were included and roofers omitted. The statistics for common labour in Table I have been limited to civic labourers, while a number of samples of common labour in factories have been given in Table III on the same lines as in Report No. 1.

The Metal Trades Group does not include those employed in railway shops, but railway shop employees are shown in Table V under "Steam Railways," in which group rates for 21 classes of workers (in running trades, maintenance-of-way, telegraphy, and shop trades) are shown. The rates for railway employees being standard for the whole country, are not given by localities, but for Canada as a whole, with a foot-note as to certain exceptions.

For factory labour, in Table II, a group of occupations was selected in each industry included, and a number of samples were then chosen of wages reported for each occupation by employers at the two dates (1920 and 1921). Where possible, an attempt was made to take samples suitably distributed over Canada from East to West.

In lumbering, samples are given for occupations in logging, and in saw-milling in several provinces, for British Columbia the prevailing rates in the coast and mountain districts being given instead of sample returns.

Index Numbers of Wage Rates

In Report No. I tables of index numbers were given in order to show the general trend of the movement in rate of wages and hours of labour. The first set of index numbers was for the rates of wages from 1901 to 1920 in the thirteen selected cities. For each series of rates, that is, for each trade or occupation in each locality, index numbers were calculated both from the hourly rates and from the weekly rates, and these index numbers were averaged by groups for all the localities, thus indicating the percentage of change in weekly rates and in hourly rates for each group. The year 1913 was taken as the base year, that is, the rate for 1913 in each case was taken as 100, so that the index numbers showed the percentages of change prior to and since that date. An average was also made for all of the series in these tables, in order to indicate the general trend in wages in such trades as a whole. In making the average index numbers the simple arithmetical averages were taken. This table of index numbers for the thirteen cities has now been brought down to June, 1921, and September, 1921. The average percentage changes in rates for the twenty-seven

cities have also been calculated and compared with those in each group for thirteen cities and found to be approximately the same.

A table of index numbers of wages for factory trades, for common labour in factories, and for lumbering, calculated from the sample records, was also published for the period of 1911 to 1920 in Report No. 1. This has also been brought down to 1921 in the following manner. Records were not available in all cases for 1921 to continue the sample records published in Report No. 1, but for 1920 and 1921 a larger number of samples was available than for the ten year period. From the samples for the two years here published the average percentage change in hourly rates has been calculated for each group; that is, for common labour, for miscellaneous factory trades and for lumbering trades. In each group the index number for 1920 was therefore reduced by the percentage change so ascertained. The changes in weekly rates were not calculated because the information as to regular weekly hours was incomplete owing to the prevalence of short time in some cases.

The classes of labour for which rates are published in Table I and used for the calculation of the thirteen-city index number table for the period 1901 to 1921 are, in the main, skilled trades; and practically all, even the unskilled, are in most cities organized to a great extent in trade or labour unions. The statistics given in these tables therefore show wage rates and hours of labour in a number of organized occupations in certain cities at the two dates under review. They do not, however, indicate the changes in wages or hours of organized or unorganized classes of labour in rural districts or outlying parts, such as farming, mining, lumbering, fishing, etc. The index numbers calculated from sample rates of wages show to some extent the trend of wages for common labour in factories, for a number of miscellaneous factory trades and for the lumbering industry. The index numbers published in the March bulletin indicated that rates of wages for these classes increased from 1913 to 1920 in somewhat greater proportion than for occupations in the building, metal, printing trades, etc. The figures for 1921 as compared with 1920 in most cases show somewhat greater decreases in the average for employees in factories and in lumbering than in the building, metal, printing trades, etc.

An addendum on wages in coal mining from 1900 to 1921 is included.

INDEX NUMBERS OF RATES OF WAGES FOR 21 CLASSES IN 13 CITIES OF CANADA, 1901-1921

						Cleaners.....	Hour	.50	44	.42	44

*Rates for running trades and despatchers and telegraphers in British Columbia are slightly higher than above. Where ranges are shown for despatchers and telegraphers, the lower rate is that paid east of Fort William, and the higher rate is that paid west of Fort William to British Columbia.

† Basis of 20 miles per hour. † Basis of 12½ miles per hour.

ADDENDUM ON WAGES OF COAL MINERS, 1900-1921

Report No. 1, on wages and hours of labour in Canada, issued as a supplement to the LABOUR GAZETTE for March, 1921, did not contain statistics as to wages for coal miners, as the information then available was incomplete. Additional figures being now available, Table A contains statistics back to 1900 for a small number of classes in each of the three principal coal mining areas in Canada, illustrating the trend of wage changes in this industry, as was done for a number of other industries in Report No. 1.

The four classes in each district for which figures are given were chosen chiefly as typical of the numerous classes employed, the choice, however, being governed to some extent by the classes for which continuous records were available. In all cases, except one noted in the table, averages for figures from at least two mining operators are given. In Alberta in the Southern district practically all the large operators pay the same rates, which are also paid in the adjoining areas in British Columbia including the Crow's Nest Pass district. Contract miners and miners on day rates are given as illustrating the wages for qualified miners, that is men holding certificates permitting them to perform certain mining operations. Drivers are given as illustrative of experienced men in underground work, and surface labourers as illustrative of changes in rates for common labour. Underground labourers usually receive slightly higher rates than those on the surface. No rates are shown for mechanics, such as machinists, blacksmiths, carpenters, etc., nor for engineers and firemen, a fairly large number of whom are employed. The wages of these have in most cases changed to about the same extent as for the actual mining employees.

In coal mining a large proportion of the men work "on contract" that is, singly or in pairs or small groups. They are given one part of the mine to work, either "at the face" removing the coal, being paid by the ton produced, or perhaps developing or opening up a section of the mine, laying tracks, timbering, etc., being paid according to the amount of coal produced incidentally, the yardage covered, etc. Upwards of 40 or 50 per cent of the mine employees are engaged in this way, the number varying according to circumstances. The average earnings per day worked therefore indicate the wages obtained by this important class. It should be noted, however, that these men have not only to provide tools as do other skilled workmen, but have to buy supplies required for their work, particularly powder for explosives. In addition to this, qualified miners are also engaged by the operators of the mines to perform work of this character or in connection with the upkeep of the mine, ventilation, etc., being paid by the day. Men engaged in moving coal, loaders, haulage men, drivers, etc., are also in some cases paid by the ton.

In comparing the figures for the various districts and the figures from year to year for a given district it should be kept in mind that in many respects conditions vary greatly according to both place and time. Without a large amount of such data available for the analysis of the statistics, no analysis of the figures shown here is possible other than that showing approximately the relative changes in wage rates from year to year in each case, and it is for this purpose only that the present statistics are published. In regard to two conditions, however, fuel and housing, the following points should be mentioned.

On account of various conditions incidental to coal mining operations, it is the custom for the operators of the mines to provide houses for a portion at least of the miners employed at rental charges more or less nominal, varying according to the size, age and condition of the houses. Water and electric light are also in some cases provided at low rates. Coal is usually provided at rates lower than for the public, the price being based nominally on the cost of production at the pit mouth. Accordingly, the cost of housing and fuel for coal miners has on the whole not risen greatly since 1914, in many cases no increases having been made by the mine operators, smaller increases in wages being given, therefore, than would otherwise have been the case.

Table B shows the wages for a number of classes in each district in September, 1920, and in September, 1921, the rates shown being for one of the large operating companies in each district. Since September, the rates for miners on Vancouver Island were decreased 30c. per day on November 1st and 6c. per day on February 1st. Decreases were proposed by some of the most important operators in Nova Scotia but were referred to a Conciliation Board. The rates for Southern Alberta, which also prevail in the Crow's Nest Pass area in British Columbia, are those provided for in an agreement which expires March 31, 1922.

§ Hours of labour in Nova Scotia, have in most cases been eight per day with ten in some cases for actual miners, that is, coal cutters, etc., and ten per day for coal handlers, etc., and ten or twelve for engineers, firemen, pumpmen, etc. Since 1919, the eight hour day for nearly all classes has prevailed. In Alberta the eight hour day has prevailed underground since 1900 with ten or twelve hours for most surface employees until 1905, ten hours till 1917, nine hours till 1919, and eight hours since. In Vancouver Island, the eight hour day has prevailed since 1900 for underground workers and most surface labour, with some classes working nine hours and some proper spacing or twelve hours. * Prevailing average earnings. †No Chinese employees included. ‡Including coal cutters on day wages, bratticemen, bricklayers, and timbermen. ‡ One mine only.

If you are in need of high grade help why not notify
your local office of the

EMPLOYMENT SERVICE OF CANADA

You will be able to select from the labour reserve of the community, and indeed, from the entire country if necessary, and you will not be limited in your choice to your own local reserve. You will dispense with the crowd at your factory gate.

You will save for the workers of Canada the fees paid to private employment agencies.

Only competent workers will be referred for interview.

Employment offices in the following cities are at your service:

NOVA SCOTIA:

Amherst,
Halifax,
New Glasgow,
Sydney.

NEW BRUNSWICK:

Chatham,
Moncton.

QUEBEC:

Hull,
Montreal,
Quebec,
Sherbrooke,
Three Rivers.

MANITOBA:

Brandon,
Dauphin,
Portage la Prairie,
Winnipeg.

ALBERTA:

Calgary,

of Labour, Ottawa.

CANADA AND THE INTERNATIONAL LABOUR CONFERENCE.

THE present bulletin has been prepared for the purpose of furnishing information in reference to the International Labour Organization of the League of Nations, which was created by the Treaty of Versailles and the other Treaties of Peace. The object of The International Labour Organization is to promote the regulation and improvement of labour conditions by international agreement.

As an indication of the results already achieved it may be mentioned that the decisions of the First International Labour Conference, held in Washington, D. C., in 1919, have led to the enactment of upwards of forty statutes bearing on labour matters in various countries, and to the preparation of upwards of one hundred separate bills. The Second International Labour Conference of 1920, which was devoted entirely to the consideration of matters affecting seamen, has been followed by the adoption of three laws and the preparation of twenty-three separate bills.

The Organization set up by the Treaty of Versailles consists of an International Conference which meets at least once in every year, a Governing Body, elected by the Conference, which meets more frequently, and an International Labour Office established at the seat of the League of Nations as part of the organization of the League.

Membership in the League of Nations carries with it membership in the International Labour Body. Germany and Austria have also been admitted to membership in the latter in accordance with a decision which was taken at the first International Labour Conference in Washington, in 1919. The complete membership of the International Labour Organization is, therefore, as follows:—

Albania,	Finland,	Norway,
Argentina	France,	Panama,
Austria,	Germany,	Paraguay,
Australia,	Great Britain,	Peru,
Belgium,	Greece,	Persia,
Bolivia,	Guatemala,	Poland,
Brazil,	Haiti,	Portugal,
Bulgaria,	Hedjaz,	Roumania
Canada,	India,	San Salvador
Chile,	Italy,	Kingdom of the Serbs, Croats
China,	Japan,	and Slovenes,
Colombia,	Latvia,	Siam,
Costa-Rica,	Liberia,	South Africa,
Cuba	Lithuania,	Spain,
Czecho-Slovakia,	Luxemburg,	Sweden,
Denmark,	Netherlands,	Switzerland,
Ecuador,	New Zealand,	Uruguay,
Esthonia,	Nicaragua,	Venezuela,

In the nineteenth century, the disadvantages of varying labour standards as between countries whose workers moved freely from one to the other and whose products competed with each other in a world market, led to a proposal to discuss the legal protection of labour from an international standpoint. The Swiss

Government took the initiative in this movement which resulted in 1900 in the formation of the International Association for Labour Legislation with headquarters at Basle, Switzerland. A Conference at Berne, Switzerland, in 1906, at which fifteen European States were represented, adopted conventions respecting the use of white phosphorus in the manufacture of matches and the employment of women during the night. Adhesion to these conventions became very general before the war, Canada taking her place in 1914 with the nations prohibiting the use of white phosphorus in matches. At the Conference at Lugano, Switzerland, in 1910, Canada was represented for the first time, the present Premier, Honourable W. L. Mackenzie King, at that time Minister of Labour being in attendance. The activities of the Association were interrupted by the outbreak of war, but the experiment of the international discussion of labour problems had been made, certain agreements had been reached and legislation enacted in conformity therewith.

Parallel with the movement towards the international regulation of labour standards, there was the development of international trade union action. The labour organizations of various countries were becoming familiar with each other and with labour conditions throughout the world. International conferences had been held and some agreement reached as to standards to be aimed at and methods to be used. Early in the war, the American Federation of Labour passed a resolution that "a Labour Congress should be held at the same time and in the same place as the Peace Congress." This proposal was discussed at a conference of delegates of British, Italian, Belgian and French labour organizations at Leeds in July, 1916. In October, 1917, a conference of labour representatives of Germany, Austria, Hungary, Bohemia, Bulgaria, Denmark, Norway, Sweden, the Netherlands and Switzerland, approved the proposal adopted at the Leeds conference, "to call an international conference before the beginning of the peace negotiations."

In accordance with the resolutions of these conferences and based on the experience of the International Association for Labour Legislation, a commission known as the Commission of International Labour Legislation was appointed by the Peace Conference to draw up a plan for a permanent organization. The report of this Commission formed the basis of the Labour sections of the Treaty of Versailles, comprising Part XIII of this Treaty, and of the subsequent Treaties of Peace.

Labour Principles Embodied in Peace Treaty.

The labour part of the Treaty of Versailles (the full text of which is appended hereto), providing for the establishment of the International Labour Organization, opens with a general statement of reasons for the action taken in the terms following:—

Whereas the League of Nations has for its object the establishment of universal peace, and such a peace can be established only if it is based on social justice; and whereas conditions of labour exist, involving such injustice, hardship and privation to large numbers of people as to produce unrest so great that the peace and harmony of the world are imperilled; and an improvement of those conditions is urgently required: as, for example, by the regulation of the hours of work, including the establishment of a maximum working day and week, the regulation of the labour supply, the prevention of unemployment, the provision of an adequate living wage, the protection of the worker against sickness, disease and injury arising out of his employment, the protection of children, young persons and women, provision for old age and injury, protection of the interests of workers when employed in countries other than their own, recognition of the principle of freedom of association, the organization of vocational and technical education and other measures; and whereas also the failure of any nation to adopt humane conditions of labour is an obstacle in the way of other nations which desire to improve the conditions in their own countries.

Certain general principles in relation to labour matters, were also embodied

in the text of the Treaty of Versailles for the guidance of the International Labour Organization. These general principles comprise article 427, as follows:—

The High Contracting Parties, recognizing that the well-being, physical, moral and intellectual, of industrial wage-earners is of supreme international importance, have framed, in order to further this great end, the permanent machinery provided for in Section 1 and associated with that of the League of Nations.

They recognize that differences of climate, habits and customs, of economic opportunity and industrial tradition, make strict uniformity in the conditions of labour difficult of immediate attainment. But, holding as they do, that labour should not be regarded merely as an article of commerce, they think that there are methods and principles for regulating labour conditions which all industrial communities should endeavour to apply, so far as their special circumstances will permit.

Among these methods and principles, the following seem to the High Contracting Parties to be of special and urgent importance.

First.—The guiding principle above enunciated that labour should not be regarded merely as a commodity or article of commerce.

Second.—The right of association for all lawful purposes by the employed as well as by the employers.

Third.—The payment to the employed of a wage adequate to maintain a reasonable standard of life as this is understood in their time and country.

Fourth.—The adoption of an eight hours day or a forty-eight hours week as the standard to be aimed at where it has not already been attained.

Fifth.—The adoption of a weekly rest of at least twenty-four hours, which should include Sunday wherever practicable.

Sixth.—The abolition of child labour and the imposition of such limitations on the labour of young persons as shall permit the continuation of their education and assure their proper physical development.

Seventh.—The principle that men and women should receive equal remuneration for work of equal value.

Eighth.—The standard set by law in each country with respect to the conditions of labour should have due regard to the equitable economic treatment of all workers lawfully resident therein.

Ninth.—Each State should make provision for a system of inspection in which women should take part in order to ensure the enforcement of the laws and regulations for the protection of the employed.

Without claiming that these methods and principles are either complete or final, the High Contracting Parties are of opinion that they are well fitted to guide the policy of the League of Nations; and that, if adopted by the industrial communities who are members of the League, and safeguarded in practice by an adequate system of such inspection, they will confer lasting benefits upon the wage-earners of the world.

International Labour Conference.

The International Labour Conference is composed of four representatives of each member state, two of whom are Government delegates and two represent employers and employed respectively. Each delegate is entitled to two advisers for each item on the conference, one of whom, it is specified, shall be a woman when questions specially affecting women are to be considered. Non-Government delegates and their advisers are to be nominated by the member states in agreement with the industrial organizations, if such organizations exist, which are most representative of employers or workpeople as the case may be, in their respective countries. The conclusions of the Conference may be cast in the form of Draft Conventions or of Recommendations to the national Governments, a two-thirds majority being required for the adoption of either a Draft convention or a Recommendation.

Article 406 of the Treaty of Versailles and of the other Treaties of Peace provides as follows:—

Each of the Members undertakes that it will, within the period of one year at most from the closing of the session of the Conference, or if it is impossible owing to exceptional

circumstances to do so within the period of one year, then at the earliest practicable moment and in no case later than eighteen months from the closing of the session of the Conference bring the Recommendation or Draft Convention before the authority or authorities within whose competence the matter lies, for the enactment of legislation or other action.

In the case of a Recommendation, the Members will inform the Secretary-General of the action taken.

In the case of a Draft Convention, the Member will, if it obtains the consent of the authority or authorities within whose competence the matter lies, communicate the formal ratification of the Convention to the Secretary-General and will take such action as may be necessary to make effective the provisions of such Convention.

If on recommendation no legislative or other action is taken to make a Recommendation effective, or if the Draft Convention fails to obtain the consent of the authority or authorities within whose competence the matter lies, no further obligation shall rest upon the Member.

It is of special interest to Canada that the Treaty recognizes the limited power of a federal government and provides that in the case of a federal state, the authority of which to enter into Conventions on labour matters is limited, the federal government may treat a Draft Convention as a Recommendation only.

Commissions of Inquiry.

Machinery is provided by the Treaty for securing the observance by the various states of Conventions which they have ratified. Complaints that any state "has failed to secure in any respect the effective observance within its jurisdiction of any Convention to which it is a party" may be made to the International Labour Office by any other state which is a party to the Convention or by any industrial association of employers or of workers or by any delegate to the Conference. The Governing Body of the International Labour Office is empowered to invite the state concerned to make such statement on the subject as it may think fit, and if no satisfactory reply is received, the complaint may be referred to a Commission of Inquiry which is to be appointed by the Secretary-General of the League of Nations from a standing panel of persons of industrial experience nominated by the member states. Each state is required to nominate three persons for appointment to this standing panel, two representing employers and workers respectively and the third a person of independent standing. A Commission of Inquiry is to be composed of three persons, one from each group.

The Government of Canada, in accordance with these provisions of the Treaty of Peace, nominated the Right Honourable Mr. Justice Duff, of the Supreme Court of Canada, as a person of independent standing, Mr. S. R. Parsons, of the British American Oil Company, Toronto, as a representative of the employers, and Mr. Joseph Gibbons, business manager of the Toronto Division of the Amalgamated Association of Street and Electric Railway Employees of America, as a representative of the workers.

Permanent Court of International Justice.

It is required by the Peace Treaty that each Government shall inform the Secretary-General of the League of Nations whether or not it accepts the report of the Commission of Enquiry and, if not accepting the report, if it proposes to refer the complaint to the Permanent Court of International Justice of the League of Nations.

Under Article 416 of the Peace Treaty, in the event of any member state failing to take the action required by the Peace Treaty with regard to a Draft Convention or Recommendation any other member state is entitled to refer the matter to the Permanent Court of International Justice whose decision with regard to such matters shall be final.

International Labour Office.

Article 396 of the Treaty states that "the functions of the International Labour Office shall include the collection and distribution of information of all subjects relating to the international adjustment of conditions of industrial life and labour and particularly the examination of subjects which it is proposed to bring before the Conference with a view to the conclusion of international Conventions and the conduct of such special investigations as may be ordered by the Conference."

The International Labour Office is required to collect all available information in regard to the problems to be dealt with and to prepare Draft Conventions or recommendations for submission to the Conference. The work of the Office has been divided for the proper performance of its duties into two divisions, namely: the Diplomatic Division which conducts the correspondence with Governments and is called upon to deal "with the questions connected with the obligations entailed by the labour provisions of the Treaty and in particular with those relating to the work of the International Labour Conference", and the Scientific Division, which is "responsible for the collection, compilation and dissemination of information of international interest and importance about industry and labour conditions in all countries". Technical services have been created to supply the necessary information on technical questions such as maritime problems, industrial hygiene, employment and unemployment, hours of labour, agriculture, alien labour, employment of women, home work, wages, social insurance, education and co-operation.

Mr. Albert Thomas is the Director of the International Labour Office. He has been associated with political and social movements in France both as a writer and as an active worker in public affairs. During the war he rendered signal service as Minister of Munitions and he has, therefore, a wide knowledge of industrial conditions and labour problems. Mr. H. B. Butler, formerly Assistant Secretary to the British Ministry of Labour, is the Deputy Director of the Office. Mr. Butler acted as Assistant Secretary General of the Commission on International Labour Legislation at the Peace Conference and, later, as Secretary-General of the Organizing Committee of the Washington Conference. The staff of the International Labour Office has been recruited from different countries, Dr. W. A. Riddell, formerly Deputy Minister of Labour for the province of Ontario, being head of the Agricultural Service.

Three of the publications of the Labour Office are issued periodically "Industrial and Labour Information", published weekly, contains brief notes on current events of interest to labour and industry; the "Official Bulletin", also a weekly publication, contains the text of official documents, reports of meetings of the Governing Body and similar matters; "The International Labour Review", published monthly, is a "scientific popular publication containing articles, statistics and information of interest to employers, workers and Governments". A Series of Studies and Reports is being issued giving short reports on special subjects of immediate interest. A Legislative Series is also being published which contains translations of the texts of the laws, decrees, etc., affecting labour which are issued in the various countries of the world.

It has devolved upon the Department of Labour of Canada to conduct considerable correspondence with the International Labour Office, with other departments of the Dominion Government, with the provinces and with workers' and employers' organizations in connection with the collection and transmission of information of various kinds at the request of the International Labour Office, and also to prepare the replies of the Government of Canada to various questionnaires.

Governing Body of International Labour Office.

The International Labour Office is under the control of a Governing Body consisting of twenty-four persons appointed by the International Labour Conference; twelve persons representing Governments, six representing employers and six representing workers. The Governing Body, in addition to its control of the Labour Office, is charged with the preparation of the Conference Agenda. Article 393 of the Treaty provides that "of the twelve persons representing the Governments, eight shall be nominated by the members which are of chief industrial importance and four shall be nominated by the members selected for the purpose by the Government Delegates to the conference, excluding the Delegates of the eight members mentioned above. Any question as to which are the members of chief industrial importance shall be decided by the Council of the League of Nations."

The countries at present represented on the Governing Body of the International Labour Organization as states of chief industrial importance are Belgium, France, Germany, Great Britain, Italy, Japan and Switzerland. The states nominated by the Conference are Argentine, Canada, Denmark, Poland and Spain. It is to be noted that a place has been left among the chief industrial states for the United States of America and that in the absence of that country representation has been given to Denmark. The Government of Canada has been duly represented at all of the meetings of the Governing Body which have been held since its establishment in October, 1919.

The employers' and workers' representatives are chosen by the employers' and workers' delegates at the Conference. At the present time the representatives of the employers are from the following countries: Belgium, France, Czechoslovakia, Italy, Switzerland and Great Britain. The workers' representatives are from Great Britain, Canada, France, Germany, Sweden and the Netherlands. Appointments to the Governing Body are for a period of three years. The Canadian Government representative on the Governing Body of the International Labour Office is the Honourable James Murdock, Minister of Labour, who succeeded Senator G. D. Robertson in this capacity following the change of government in January, 1922. Mr. P. M. Draper, Secretary-Treasurer of the Trades and Labour Congress of Canada, is one of the six workers' representatives.

Protests have been made regarding the present composition of the Governing Body, both as to the states deemed to be of chief industrial importance and as to the number of representatives accorded to European countries. As the term of office of the present members expires in 1922, consideration was given at the last Conference to proposals for adequate representation of extra-European countries and for a satisfactory basis of selection of the states of chief industrial importance. These subjects have also been set down for consideration at the next Annual Conference of the International Labour Body with a view to the possible necessity of changes in the terms of the Treaty of Peace. The League of Nations also has the latter subject before it at present for interpretation of the intent of the Treaty in its present terms, and it is hoped that a decision will be announced before the next Annual Conference in October, 1922.

FIRST INTERNATIONAL LABOUR CONFERENCE, 1919

The first session of the International Labour Conference, was held at Washington in October and November, 1919, in accordance with Article 424 of the Treaty of Peace. The subjects to be considered at this first Conference were stipulated in the Treaty and included the application to industry of the principle of the eight-hour day or forty-eight hour week: the prevention or mitigation of unemployment; the employment of women before and after child-birth, during the night and in unhealthy processes; the employment of children during the night and in unhealthy processes, and the age at which they should be employed the extension and application of the International Conventions adopted at Berne in 1906 on the prohibition of night work for women and of the use of white phosphorus in the manufacture of matches.

Thirty-eight countries were represented by delegates as follows: Argentina, Belgium, Bolivia, Brazil, Canada, China, Czecho-Slovakia, Columbia, Denmark, France, Great Britain, Greece, Guatemala, Haiti, India, Italy, Japan, Luxemburg, Netherlands, Nicaragua, Norway, Panama, Paraguay, Persia, Peru, Poland, Portugal, Roumania, San Domingo, San Salvador, Siam, Kingdom of the Serbs, Croats and Slovenes, South Africa, Spain, Sweden, Switzerland, Uruguay and Venezuela.

The Canadian Government delegates were the Honourable G. D. Robertson, at that time Minister of Labour, and the Honourable N. W. Rowell, at that time President of the Privy Council and Acting Secretary of State for External Affairs. As some of the items on the agenda related to matters falling within the jurisdiction of the provinces, the Dominion Government invited each province to nominate a representative to act as adviser to the delegates. The list of advisers included Mr. F. A. Acland, Deputy Minister of Labour, Mr. Gerald H. Brown, Assistant Deputy Minister of Labour, Mr. Loring G. Christie, Legal Adviser to the Department of External Affairs, and the following provincial representatives: Mr. D. A. Cameron, M.P.P., of Sydney, N.S., on behalf of the province of Nova Scotia; Honourable C. W. Robinson, Minister of Lands and Mines of the province of New Brunswick; Honourable W. L. Mackenzie King, M.P., at that time Leader of the Dominion Opposition, on behalf of the province of Prince Edward Island; Mr. Louis Guyon, Deputy Minister of Labour of the province of Quebec; Dr. W. A. Riddell, then Deputy Minister of Labour of the province of Ontario; Honourable Thomas H. Johnson, Attorney General of Manitoba; Honourable C. R. Mitchell, at that time Provincial Treasurer for Alberta; and Mr. J. D. McNiven, Deputy Minister of Labour of the province of British Columbia. Mr. Gerald H. Brown, also acted as secretary of the Canadian delegation. The employers' delegate was Mr. S. R. Parsons, appointed on the nomination of the Canadian Manufacturers' Association. The workers were represented by Mr. P. M. Draper, Secretary-Treasurer of the Trades and Labour Congress of Canada. Each of these delegates was accompanied by five advisers. One of the advisers of the workers' delegation was a woman, Mrs. Kathleen Derry, of the Boot and Shoe Workers' Union, Toronto.

Commissions, composed of an equal number of representatives of Governments, employers and workers, were set up by the Conference to consider the various items of the agenda. In dealing with the matter of the eight-hour day, it was decided to appoint two commissions, one to deal with the general problem of hours of work and the other to deal with it as it affected countries in which special climatic or other conditions exist. The Peace Treaty recognized that "differences of climate, habits and customs, of economic opportunity and industrial tradition, make strict uniformity in the conditions of labour difficult of immediate attainment," but holding "that labour should not be regarded merely

as an article of commerce," it considered "that there are methods and principles for regulating labour conditions which all industrial communities should endeavour to apply, so far as their special circumstances will permit." It was, therefore, necessary to give particular consideration to the requirements of tropical countries and countries less highly developed materially.

Draft Conventions were adopted by the Conference on the eight-hour day, unemployment, employment of women before and after childbirth, employment of women during the night, minimum age for the employment of children, and the night work of young persons.

Draft Convention Respecting the Eight-Hour Day.

The Draft Convention regarding hours of labour, adopted by a vote of eighty-two to eight, with one abstention, limits the working hours of persons employed in any public or private industrial undertaking to eight in the day and forty-eight in the week with certain exceptions. The daily hours of labour may be extended not more than one hour for the purpose of obtaining a shorter work-day on one or more days of the week. Provision is made for a maximum average work-week of fifty-six hours in continuous industries, and for the regulation by public authorities of exceptions in the case of men whose work must necessarily be carried on outside the limits laid down of the general working of an establishment or whose work is essentially intermittent. Such regulations may be made only after consultation with the organizations of employers and workers concerned and the rate of pay for overtime must not be less than one and one-quarter times the regular rate.

In case of accident, actual or threatened, or of urgent work to be done to machinery or plant, or in case of *force majeure*, the limit of hours may be exceeded, but only when necessary to avoid serious interference with the regular working of the undertaking. In order to insure against abuse of these exceptions, each Government is required to communicate to the International Labour Office a list of processes deemed necessarily continuous, full information in regard to public regulations permitting exceptions, and as to agreements between workers' and employers' Associations which permit more than eight hours work in a day but not more than an average of forty-eight in a week.

The term "industrial undertaking" is defined to include, besides mining, manufacturing and construction work, the transport of passengers or goods by road, rail, sea or inland waterway, the handling of goods at docks and warehouses, but excluding transport by hand.

The Draft Convention provides for the consideration of the provisions relating to transport by sea or inland waterway by a special Conference which was held in the following year.

Certain modifications in the Draft Convention were made in its application to Japan, a maximum of fifty-seven hours being fixed for all persons of fifteen years of age or over except in the silk industry, in which case the limit is fixed at sixty hours. Forty-eight hours in a week is the maximum allowed all persons under fifteen years of age and this age-limit must be raised to sixteen not later than July 1, 1925. It is further provided that in the case of factories, only the undertakings covered by the Japanese factory law shall be covered by the Convention, though it is also provided that the law must be amended to cover factories employing ten or more persons instead of only those employing more than fifteen persons as at present.

The Convention is not to apply to China, Persia and Siam, nor to British India except in a limited degree. In the case of the last-named country, a maxi-

imum of sixty hours in a week is fixed for all workers in industries covered by the factory acts and in certain branches of railway work. Consideration of the application of this convention to China, Persia and Siam was reserved for a future Conference.

In Greece and Roumania, the period allowed for ratification is extended, the date for full ratification being July 1, 1924.

The ratification of the Draft Convention regarding hours of labour must be considered in connection with the political constitution, existing laws and customs and the economic conditions of the various countries.

The eight-hour day and forty-four hour week is the general practice in Great Britain through the working of collective agreements and in the coal mining industry by law, but the British Government has found difficulty in ratifying the Draft Convention owing as it is understood, to the restrictions on overtime work imposed by the Convention and the fact that existing agreements between the railway companies and their employees provide for an eight-hour day and the forty-eight hour week, but allow a greater amount of daily overtime than the Draft Convention permits.

In Italy the eight-hour day or a forty-eight hour week is already established in the majority of industries, and a bill was drawn up in 1920 to give legal force to the practice. Delay has occurred however, owing as it is understood to a desire to combine acceptance of the Draft Convention with a previously proposed bill.

In France, a somewhat similar situation exists. An act of 1919 provided for an eight-hour day in industrial and commercial undertakings, and special acts of the same year made similar provision for the mercantile marine and for mines. A law enacted in 1913 established an eight-hour day for coal mines. A bill to ratify the Draft Convention of the Washington Conference was introduced in the Chamber of Deputies in 1920 but has not yet been passed.

In the Netherlands an act was passed in 1919 providing for an eight-hour day and forty-five hour week in factories and workshops. Ten hours a day and fifty-five a week were permitted in mercantile stores and in hospitals. Authority was given to the Minister of Labour to extend the hours in factories by not more than two hours a day and not more than ten hours a week during a maximum period of four years if the protection of national industries rendered such action advisable. The act was to come into force on October 24, 1920, but in September, 1920, regulations were issued exempting from its operation for two years the iron and steel foundries, engine-building, shipbuilding, railway construction, textile industries, cotton and wool spinning, ribbon and hosiery manufacture and some less important industries. The extensions of hours of work in no case, however, exceeded forty-eight hours. A revision of the act was proposed to permit of exemptions in undertakings which are liable at certain seasons of the year to extra pressure of work, or where the employers' and workers' organizations agree to demand them. The Draft Convention, therefore, has not as yet been ratified by the Netherlands Government.

In Sweden, a law which came into operation in July, 1921, enforces a forty-eight hour week with a daily maximum of nine hours in establishments employing more than four persons. Overtime is limited to 30 hours in a month and 200 in a year, except in cases of special urgency when the Department of Social Affairs may permit a further extension of not more than 20 hours in a month and 120 in a year. This act is of an experimental nature and is to be revised in 1923.

In Belgium, an act providing for an eight-hour day came into force in October, 1921. Permission is to be given for an extension of hours in consequence of an agreement between an employer and a majority of his workmen and the application of the act may be suspended by the King in cases of national danger or

if it is deemed "necessary in the national interest to secure by the development of exports the means of exchange required for the import of necessities."

In Germany the normal system is now the eight-hour day. Orders issued in 1918 and 1919 limited the working day of industrial and commercial employees to eight in a day, and the majority of collective agreements have embodied the eight-hour day system often with less than the forty-eight hour week. A draft bill was prepared during the latter part of 1921, concerning hours of labour of industrial workers in industry, commerce and mines. The introductory note accompanying it states that one of the main reasons for introducing the bill "arises from the participation of Germany in the International Labour Organization of the League of Nations of which Germany is a member with full rights and obligations." The essential provisions are in agreement with the fundamental provisions of the Draft Convention of the International Labour Conference, and it is expected that a bill to ratify the Draft Convention will be considered when the government bill on hours of work is brought before the Reichsrat.

In Switzerland, the Factory Act of 1919 provided for a forty-eight hour week for all but small industries and the Federal Council proposes to enact special legislation covering these occupations.

Austrian laws, enacted in 1919, conform in their essential principles with the Draft Convention.

A Spanish decree, issued in 1919, also conforms generally to the Washington Draft Convention and in April, 1921, a bill was submitted to the Senate to ratify the various Draft Conventions.

In Denmark similar action has been taken, and a commission has drawn up a bill concerning hours of labour.

In Poland, it has been decided to lay before the Diet a bill for the ratification of the majority of the Draft Conventions, and an act of 1919 established the eight-hour day and forty-six hour week.

In Luxemburg, a ratifying bill has been submitted to the Council of State and a decree of December, 1918, and an act of October, 1919, partially cover the requirements of the Convention.

In Argentine and Chile, bills embodying the principles of the Draft Convention have been submitted to the proper authorities.

In South Africa, an amendment to the Factories Act in course of preparation limits working hours to eight in a day and forty-eight in a week in industrial undertakings.

Greece, India, Roumania and Czecho-Slovakia have ratified the Draft Convention concerning hours of work. The first three of these states, however, were made the subject of special provisions at Washington.

In Canada, the question of legislative jurisdiction as between the Dominion and the provinces in the matter of dealing with this Draft Convention was referred by the Dominion to the Minister of Justice for examination and was afterwards dealt with in a federal order-in-council, dated November 6, 1920.* The opinion given by the Minister of Justice, which is confirmed by the Order in Council, is that it involves legislation competent to the Dominion Parliament in so far as Dominion works and undertakings are concerned but which is otherwise within the authority of the Provincial Legislatures. Following the adoption of this Order in Council the subject was referred to the attention of the several provincial governments in so far as the matters within their jurisdiction were concerned. The Draft Convention was also brought to the attention of the Dominion Parliament.†

* See LABOUR GAZETTE, November, 1920.

† See LABOUR GAZETTE, June 1921.

With respect to the existing hours of labour in industrial undertakings in Canada, it may be observed that the provincial Factory Acts and Minimum Wage Acts restrict the employment of women and young persons in the matter of hours, and collective agreements and trade practices make the eight-hour day the rule for large numbers of workers. A basic eight-hour day obtains for railroad workers through agreements effected by the Canadian railways in 1918. In Alberta, British Columbia and Ontario the eight-hour day is enforced by law for miners working underground. British Columbia includes within its act men working above ground and Ontario excludes shift-bosses, cage-tenders, etc. In 1921, British Columbia passed an act providing for an eight-hour day in accordance with the provisions of the Draft Convention, but it is provided that this act shall come into force concurrently with or after the enactment of similar legislation by the other provinces.

Draft Convention Concerning Unemployment

The second item on the agenda of the Washington Conference was "the question of preventing and providing against unemployment." A Draft Convention was adopted providing that each Government should communicate to the International Labour Office at intervals, not exceeding three months, all available information, statistical or otherwise, concerning unemployment; providing for the establishment of a system of free public employment exchanges under central control and assisted by committees including representatives of employers and employed; and providing, further, that states which already had systems of unemployment insurance should come to some arrangement among themselves whereby workers moving from one country to another might receive the same benefits as other workers in the same country.

Two Recommendations were also adopted regarding this item; one that each state should, on condition of reciprocity and upon terms to be agreed between the countries concerned, admit foreign workers and their families to the benefit of its labour laws and to the right of organization enjoyed by its own workers, and the other, suggesting the establishment of an effective system of unemployment insurance; the co-ordination of all work undertaken under public authority in order to reserve such work as far as practicable for periods of unemployment; the prohibition of private employment agencies and of the recruiting of bodies of workers in one country with a view to their employment in another except by mutual agreement between the countries and after consultation with the employers and workers in the industries concerned. A resolution was passed inviting the Governing Body of the International Labour Office "to form an International Commission empowered to formulate recommendations upon the best methods to be adopted in each state for collecting and publishing all information relative to the problem of unemployment in such form and for such periods of time as may be internationally comparable."

The Draft Convention regarding unemployment has been ratified by Denmark, Finland, Great Britain, Greece, India, Roumania and Sweden.

The Government of Austria is of the opinion that all the provisions of the Draft Convention and Recommendations concerning Unemployment are already in force in that country.

The Italian Government has made a similar statement.

Belgium has undertaken since 1919 the larger part of the cost of carrying on free public employment agencies.

France has a system of free public exchanges, and a bill has been introduced to define their legal status and that of the joint committees controlling them and to give the monopoly of finding employment to these institutions.

Germany has a highly developed employment system.

A Spanish decree of September, 1920, established, under the control of the Ministry of Labour, a general service of employment agencies in order to develop and promote the agencies established by other bodies.

Norway has a system of public employment exchanges, and private offices are allowed to operate only with the consent of the Minister for Social Affairs and under municipal license.

A bill has been introduced in the Netherlands to develop the present system of public employment agencies along the lines of the Draft Convention.

Switzerland has also drafted a bill to bring the existing system into conformity with the draft convention.

Similar legislation is pending in Poland, Czecho-Slovakia and in the Serb-Croat-Slovene State.

In Chili, private employment agencies will be prohibited if a proposed bill is adopted.

In Uruguay a bill is being drawn up to provide for the organization of public facilities for finding employment under the joint control of employers and workers.

A Japanese law of April 8, 1921, provides for the establishment of free public employment exchanges in all towns of more than 30,000 inhabitants. The Government has announced its intention of gradually suppressing private agencies and, in the meantime, placing them under its control.

The Canadian Employment Offices Co-ordination Act of 1918 provides for co-operation between the Dominion and the provincial governments in the operation of public employment exchanges. By provincial legislation in Alberta, British Columbia, Manitoba, Nova Scotia and Saskatchewan, employment offices charging fees have been abolished. Ontario has taken similar action except in the case of a few specified agencies. British Columbia passed an act in 1921 requiring that all private employment agencies shall furnish a written monthly report to the Provincial Government officer in charge of the provincial branch of the Employment Service of Canada.

Recommendation Concerning Unemployment.

One section of the Recommendation of the Washington Conference concerning unemployment deals with unemployment insurance. In this matter a choice is allowed between the establishment of a state system and the grant of government subventions to institutions providing benefits for unemployed members.

In 1920 and 1921, Great Britain extended the scheme of compulsory insurance established by the National Insurance Act of 1911.

In Austria, compulsory unemployment insurance was established by an act passed in March, 1921.

An Italian decree to the same effect was issued in October, 1919.

In Belgium, Germany and Luxemburg, bills providing for compulsory insurance are being prepared.

Denmark, Spain, Finland, France, Norway, Netherlands, and Czecho-Slovakia have in force systems with state subventions.

In Poland, Sweden, Switzerland, South Africa, Brazil, Chile, Argentine and India, the matter of unemployment insurance is under consideration.

An investigation of the subject of unemployment insurance was also undertaken for the Government of Canada in 1921.

With regard to that part of the Recommendation urging that Governments should take measures to co-ordinate the execution of public works and to reserve as far as practicable such work for periods of unemployment, and for districts most affected by such unemployment, approval has been expressed by a number of Governments. Austria, Denmark, Finland, France, Great Britain, Italy, Norway, the Netherlands, Poland, Sweden and South Africa are taking steps to carry out this policy. In the case of some of these countries, the practice had already been established.

In Canada the regulation of employment by a well-planned distribution of government orders has been endorsed by the Employment Service Council. An order-in-council of October 4, 1921, provides for co-operation between the Department of Labour and the Department of Railways and Canals in the placing of orders for equipment for the Canadian National Railways. Various Government departments have conferred with the Employment Service as to the advisability of initiating or continuing public works in view of the prevailing employment situation. The local offices of the Employment Service are constantly being called into council by Dominion, provincial and municipal authorities with regard to the need for undertaking public works in their localities.

That the collective recruiting of workers in one country with a view to their employment in another should be permitted only by mutual agreement between the countries concerned and after consultation with employers and workers in each country in the industries concerned, was a further feature of the Recommendation concerning Unemployment of the Washington Conference.

Denmark, Germany, Spain, Finland, France, Italy, Norway, Netherlands, Poland, Czecho-Slovakia and the Argentine have adopted this Recommendation.

Spain, France, Italy, Poland and Czecho-Slovakia have concluded international agreements based on this principle.

Under the terms of the federal order-in-council of November 6, 1920, the Draft Convention respecting unemployment is regarded as falling within federal jurisdiction. Consideration has since been given to the subject by the federal authorities. The principal object of the Draft Convention, namely, the establishment of a national system of employment agencies, has already been met by the establishment in 1919 of the Employment Service of Canada.

Reciprocity of Treatment of Foreign Workers.

With regard to the Recommendation on reciprocity of treatment of foreign workers, the International Labour Office has been informed that South Africa, Germany, Austria, Chili, Denmark, Spain, Finland, France, India, Italy, Luxemburg, Poland and Czecho-Slovakia have adopted it in whole or in part. In the case of certain countries conventions have been concluded with other states with respect to reciprocal treatment of foreign workers in the matter of certain laws such as social insurance.

In this connection a resolution of the International Labour Conference at Washington is worthy of note. It is to the effect that the Governing Body of the International Labour Office should appoint "an International Commission which, while giving due regard to the sovereign rights of each state, shall consider and report what measures can be adopted to regulate the migration of workers" and protect the interests of wage-earners living abroad. A Commission was duly constituted for this purpose in 1921, of which Viscount Ullswater is chairman, and the problems dealt with will be placed, in all probability, on the agenda of a future Conference. Canada is represented on this Commission by Lt.-Col. Obed Smith, Commissioner of Emigration in London.

Employment of Women Before and After Childbirth.

The Draft Convention for the protection, before and after childbirth, of women employed in industrial and commercial undertakings provides for the prohibition of employment for six weeks following childbirth and the right to leave work on production of a medical certificate stating that confinement will take place within six weeks. Maternity benefits paid from public funds or by a system of insurance, free medical attendance and the right to half-hour periods twice a day for the purpose of nursing the child are to be provided. No women may be dismissed by an employer during the time she is permitted under this convention to remain away from work unless the absence exceeds a maximum period fixed by the competent authorities in each country. A resolution was passed by the Conference requesting the various countries to study this question with a view to giving every working woman the right to more than six weeks' freedom from employment after childbirth and for further benefits.

Greece and Roumania have fully ratified this Convention. Argentine, Belgium, France, Germany, Italy, Poland and Spain have taken steps with a view to ratification. In Great Britain, provision is made for maternity and sickness benefits by the National Insurance Act of 1911, and the Act respecting factories forbids any one to employ a woman within four weeks after childbirth. Switzerland has provided for an examination of the question together with a revision of the system of sickness insurance.

Austrian legislation of 1921 gives practical effect to the Convention, and Chili, Denmark and Portugal have introduced bills making similar provision. Action in Czecho-Slovakia has been delayed owing to the desire to include agricultural workers. The Netherlands Government has expressed its intention of amending legislation in order to put into force the principles of the Convention. In South Africa the Factory Act provides for freedom from work for four weeks before and six weeks after childbirth and for a benefit of 20s. per week.

The enactment of legislation in Canada to carry out the provisions of this Draft Convention is declared by the federal order-in-council of November 6, 1920, to be a matter within the jurisdiction of the several provinces. An act was passed in British Columbia in April, 1921, which became operative on January 1st, 1922, and which provides for the carrying out of the Convention in all respects except in so far as maternity benefits are concerned.

Night Work of Women

A Draft Convention adopted at Washington prohibits the employment of women in any industrial undertaking for eleven consecutive hours between 10 p.m. and 5 a.m. In countries where there is no legislation on this subject, the consecutive period is reduced to ten hours but must be extended to eleven at the end of three years. An exception is permitted in the case of an interruption to work which it was impossible to foresee and which is not of a recurring character and in work which has to do with raw materials subject to rapid deterioration. Special provisions are made for India and Siam and tropical countries.

A somewhat similar convention had been drawn up at Berne in 1906 and was later ratified by twelve states.

Czecho-Slovakia, Great Britain, Greece, India, Roumania and South Africa have ratified the Washington convention. Of these countries, Great Britain is the only one which had ratified the Berne convention.

Argentine, Belgium, Brazil, France, Germany, Italy, Netherlands and Spain have introduced bills with a view to ratification. Argentine and Brazil being the only two countries which had not adhered to the Berne convention.

Chili, Denmark, Portugal and Switzerland have drawn up or introduced bills concerning the night work of women.

Australia, Bulgaria, Finland, Japan, New Zealand, Norway, the Serb-Croat and Slovene State, Siam, Uruguay and Venezuela have announced their intention of taking measures with a view to ratification or the enactment of legislation.

In Canada, this matter is within provincial jurisdiction. The Factory Acts of the various provinces prescribe the hours during which women may not be employed and in no case are they permitted to be employed in a factory or workshop before 6 a.m. or later than 11 p.m. One province permits employment up till 11 p.m. and two up to 10.30 p.m. One fixes 10 p.m., three fix 9 p.m. as the limit and one 8 p.m. The hour in the morning varies from 6 a.m. to 7 a.m. in the different provinces. Regulations issued under the Minimum Wage Acts of certain of the provinces also stipulates the hours during which women may be employed in the industries concerned. British Columbia passed an act in 1921 to prohibit the employment of women between the hours of 8 p.m. and 7 a.m., but it is provided that the law shall come into force concurrently with or after the coming into force of similar laws in the other provinces.

Age of Admission of Children to Employment.

The Draft Convention on the age for admission of children to industrial employment fixes the minimum age at fourteen and requires an employer to keep a register of all persons under sixteen years of age employed by him. Exemption is provided for children in technical schools which are under public supervision. Special provisions apply to Japan and India. In the former country, children over twelve years of age who have completed a course in an elementary school may be admitted to employment. In India, the minimum age is fixed at twelve years, but only factories employing more than ten persons are included within the scope of this provision.

Ratification of the Convention has been reported by Great Britain, Greece, Roumania and Czecho-Slovakia.

In Belgium, an act of June, 1921, which establishes an eight-hour day and forty-eight hour week gives effect also to the Convention concerning the night employment of women. Chile proposes to give effect to the Convention through the Draft Code of Labour and Social Welfare.

In Denmark and Portugal, bills concerning the night work of women have been introduced, and in Switzerland one has been prepared.

In Poland, the custom of working two shifts of 12 hours each in sugar refineries during the busy season has placed difficulties in the way of ratification, but the Minister of Labour is endeavouring to find a solution of this problem.

In Austria and Italy, it is thought necessary to raise the age of compulsory school attendance before the minimum age of employment can be fixed at fourteen years.

Most of the Canadian provinces have legislation prohibiting the employment of children in industry below the age of fourteen years. In 1921, British Columbia passed an act embodying the provisions of this Draft Convention, but it is provided that this act shall come into force concurrently with or after the enactment of similar legislation by the other provinces.

Night Work of Young Persons.

The Draft Convention regarding the night work of young persons provides for the prohibition of the employment during the night of persons under the age of eighteen years, except in the case of certain continuous industries when persons

over sixteen years of age may be employed. Special provisions are made for coal mines, bakeries, industries in tropical countries, and in cases of special emergency. In coal mines, young persons may be employed between 10 p.m. and 5 a.m., if there is an interval of ordinarily fifteen hours and in no case less than thirteen hours between the periods of work. In bakeries, the prohibited period is between 9 p.m. and 4 a.m.

Great Britain, Greece, Roumania, and India have ratified this Draft Convention.

Great Britain, Belgium and Denmark have enacted legislation giving effect to its provisions and Argentine, Belgium, Czecho-Slovakia, France Italy, Netherlands, Poland, Portugal, Spain and Switzerland have introduced bills authorizing its ratification.

Chile and Denmark have introduced bills to bring existing laws into harmony with the convention.

In Canada those provisions in the Factory Acts of Quebec, Ontario and Saskatchewan, which prohibit the employment of women during the night, forbid also the employment of young persons. The act, passed in British Columbia in 1921, forbidding the employment of young persons between the hours of 8 p.m. and 7 a.m. is to come into force concurrently with or after the enactment of similar legislation in the other provinces.

Industrial Hygiene.

The Washington Conference had also under consideration matters relating to industrial hygiene. Recommendations were made concerning the prevention of anthrax, the protection of women and children against lead poisoning and the establishment of Government health services.

With reference to anthrax, the Conference recommended that arrangements should be made for the disinfection of wool infected with anthrax spores either in the country exporting such wool or in the country importing it.

With regard to lead poisoning, it was recommended that women, young persons and children should be excluded from employment in certain specified industries and employed in processes involving the use of lead compounds only under conditions of proper ventilation, cleanliness, periodic medical examinations, notification of lead poisoning and compensation therefor, suitable clothing and accommodation and the prohibition of bringing food or drink into workrooms.

It was further recommended that each state should establish a system of efficient factory inspection and a Government service especially charged with the duty of safeguarding the health of workers.

Concerning the first of these Recommendations, Great Britain has passed legislation empowering the Government to prohibit the importation of dangerous wools. The Government has also established an experimental disinfecting station at Liverpool. India has taken steps to deal with anthrax in an amendment to the Factory Act and the Netherlands has also dealt with the matter. In Canada, an order-in-council was passed on August 12, 1920, approving regulations requiring the furnishing of sanitary certificates by foreign exporters as to the cleanliness and freedom from infection of wool and hair destined for Canada.

Great Britain and the Netherlands have enacted laws giving effect to the recommendation regarding lead poisoning; and Chili, India, Portugal and Switzerland have introduced bills for this purpose. Other countries have informed the International Labour Office that action is under consideration.

Austria, Chile, and India have prepared bills to give effect to the recommendation for the establishment of Government health services.

In Canada, the provinces of Alberta, British Columbia, Manitoba, New Brunswick, Nova Scotia, Ontario and Saskatchewan impose a general restriction on the employment of women and young persons in unhealthy processes by prohibiting the employment of such persons where their health is likely to be injured. Alberta and Ontario prohibit any person taking food into any room where paint, varnish, dye, white lead, arsenic or other poisonous substance is exposed, and provide that drinking water in any such room shall be taken directly from taps or suitable closed receptacles. Alberta provides that where any woman or girl over fifteen years of age is employed in a factory where there is a contravention of this provision, such person shall be deemed to be unlawfully employed. Ontario makes a similar provision applicable to girls between fourteen and eighteen years of age and to boys between fourteen and sixteen years. In Quebec, an order-in-council issued under the authority of the Industrial Establishments Act prohibits the employment of boys under sixteen and girls under eighteen years of age in industries in which lead, mercury, phosphorus and arsenic are manufactured or used.

A further Recommendation of the Washington Conference was that states which had not already prohibited the use of white phosphorus in the manufacture of matches in accordance with the Berne Convention of 1906 should adhere to the convention without delay. The result of this Recommendation is the reporting to the International Labour Office of the adherence of Australia, Austria, Czechoslovakia, India, Poland, Roumania and Sweden. Acts prohibiting such manufacture have been passed by Greece, Japan and Italy. Denmark, France, Germany, Netherlands, Switzerland, Canada, Great Britain, Italy, New Zealand, Norway, Spain and South Africa signed the convention before the end of 1914.

SECOND INTERNATIONAL LABOUR CONFERENCE, 1920

The second session of the International Labour Conference was held at Genoa in June and July, 1920, and in accordance with a resolution adopted at the Washington Conference, was devoted to the consideration of matters relating to seamen.

The Canadian Government delegates were the Honourable Philippe Roy, Commissioner-General of Canada at Paris, and Mr. G. J. Desbarats, Deputy Minister of Naval Affairs. The employers were represented by Mr. Thomas Robb, of Montreal, Secretary of the Shipping Federation of Canada, and the workers by Mr. J. C. Gauthier, of Montreal, President of the Sailors', Firemen's and Cooks' Union of Canada.

Draft Conventions were adopted regarding facilities for finding employment for seamen, the minimum age of employment of children on board ship and unemployment indemnity in case of loss or foundering of ship. Recommendations were passed concerning hours of work in inland navigation, hours of work on fishing vessels, unemployment insurance for seamen and the establishment of national seamen's codes. Resolutions were also adopted for the instruction and guidance of the International Labour Office concerning the prevention and treatment of venereal disease in the mercantile marine, insurance against unemployment, special clauses in articles of agreement and seamen's codes and the education of children or apprenticed seamen. The prohibition of the employment of trimmers and stokers under eighteen years of age, the medical examination of children before employment on board ship and the education of children were referred to the next Conference for consideration. These last mentioned subjects were dealt with at the Conference of 1921.

A Joint Maritime Commission composed of twelve persons was appointed to advise the International Labour Office on questions relating to seamen. Mr. Thomas Robb, of Montreal, being one of the five ship-owners' representatives on the Commission.

Employment Offices for Seamen.

The Draft Convention regarding facilities for finding employment for seamen provides that the business of finding employment for seamen shall not be carried on for pecuniary gain, but in the case of existing agencies they may be continued temporarily under Government license and supervision. Free public employment offices for seamen are to be maintained either by joint arrangement between shipowners and seamen or by the state, but in any case administered by persons having practical maritime experience. Joint committees are to be constituted to advise on matters connected with the carrying on of these offices. The necessary guarantees for protecting all parties concerned must be included in the contract of engagement and proper facilities must be assured to seamen for examining such contract before signing. Each state must see that facilities for finding employment for seamen are available for seamen of all countries ratifying the Convention, and the International Labour Office is charged with taking steps to secure the co-ordination of the different national systems for finding work for seamen in agreement with the Governments and organizations concerned.

In Australia, the Navigation Act, 1919, prohibits the finding of employment for seamen for payment.

In Germany, a bill has been introduced to systematize the seamen's employment offices. Denmark has introduced a bill to ratify the Convention, and Italy, France, Great Britain and Norway have systems which maintain special services for seamen.

In Chile, it is considered that the provisions of the Convention are already in force.

Sweden has ratified the Convention, a system of employment offices for seamen being already in operation.

In the case of Canada the proposals contained in the Draft Convention are regarded as falling within federal jurisdiction and legislation now on the statute books enables the Dominion, in so far as legislation for the purpose is required, to implement all the proposals of the Convention. Consideration is being given to the subject by the federal government.

Minimum Age for Employment at Sea.

The Draft Convention adopted by the Conference prohibits the employment of children at sea under the age of fourteen years.

Great Britain and Sweden have ratified this Convention.

Germany, Belgium, and Denmark have introduced bills to ratify it, and France, Norway and Poland have prepared legislation putting the provisions into effect.

In Poland the age limit is fixed at fifteen years.

Australia, Belgium, Netherlands, Spain and Sweden had laws prohibiting employment on board ship under fourteen years of age.

The provisions of this Draft Convention and an opinion obtained from the Department of Justice relative to the legislative jurisdiction of the Dominion Parliament to deal with the subject were submitted to Parliament at its last session.*

Unemployment Indemnity in Case of Loss of Ship.

The Draft Convention adopted concerning unemployment indemnity in case of loss or foundering of the ship provides that the wages of the seamen shall be continued for two months or until they find employment, whichever period is the shorter.

The Australia Navigation Act provides an indemnity in case of loss or foundering of the ship.

Germany and Chile have introduced bills to carry out the Convention and France proposes to provide for an unemployment indemnity.

The provisions of this Draft Convention and an opinion obtained from the Department of Justice relative to the legislative jurisdiction of the Dominion Parliament to deal with the subject were submitted to Parliament at its last session.*

Unemployment Insurance for Seamen.

A Recommendation passed at the Genoa Conference was to the effect that each state should establish an effective system of unemployment insurance for seamen and that the joint committee appointed to advise the International Labour Office should study the whole question of unemployment insurance.

In Great Britain, Norway and the Netherlands, existing legislation provides insurance against unemployment for seamen.

Sweden and Poland are studying the matter with a view to legislation.

In Belgium and Denmark state subventions are provided for unemployment funds for seamen.

*See LABOUR GAZETTE, June, 1921.

The provisions of this Recommendation and an opinion obtained from the Department of Justice relative to the legislative jurisdiction of the Dominion Parliament to deal with the subject were submitted to Parliament at its last session.*

Hours of Work in Inland Navigation and in Fishing Industry.

The Conference recognized the difficulties arising from the fact that inland waterways are frequently boundaries between two countries. It was, therefore, proposed in a Recommendation of the Conference that an agreement should be entered into by nations having boundary waters so that their regulations should be uniform and should follow the general lines of the labour clauses of the Peace Treaty and the Draft Conventions adopted at the Conference. In the case of other countries, it was recommended that legislation should be enacted limiting hours of labour as far as possible in the spirit of the Convention adopted at the Washington Conference.

Another Recommendation is to the effect that hours of work in the fishing industry should be limited to eight in a day and forty-eight in a week in so far as the conditions peculiar to the industry permit, and that legislation enacted to this end should be framed after consultation with the organization of employers and workers concerned.

The provisions of this Recommendation and an opinion obtained from the Department of Justice relative to the subject of legislative jurisdiction were submitted to Parliament at its last session.*

National Seamen's Codes.

With regard to seamen's codes, it was recommended that each state should undertake the embodiment in a seamen's code of all its laws and regulations relating to seamen preparatory to the drawing up of an international code which would apply to all maritime nations. It was recognized that an international code should be very elastic in order to allow the different nations to adopt supplementary legislation, but that it should cover the general conditions of employment at sea and in particular such points as articles of agreement, accommodation of seamen, discipline, methods of conciliation between ship-owners and seamen and insurance for seamen. A resolution adopted by the Conference recognized that contracts of engagement of seamen contained provisions inserted in the public interest and also provisions inserted in the private interests of ship-owners or seamen or both. It affirmed the principle that clauses in the public interest should be the same in all countries, that the owners and seamen should be placed on a footing of equality as regards their legal rights and that violation of the private clauses should not be dealt with as criminal offences.

The provisions of this Recommendation, and an opinion obtained from the Department of Justice relative to the legislative jurisdiction of the Dominion Parliament to deal with the subject, were submitted to Parliament at its last session.*

*See LABOUR GAZETTE, June, 1921.

THIRD INTERNATIONAL LABOUR CONFERENCE, 1921

The third annual meeting of the International Labour Conference was held at Geneva in October and November, 1921. The Canadian Government delegates were Mr. Gerald H. Brown, Assistant Deputy Minister of Labour, and Lt.-Col. J. Obed Smith, Commissioner of Emigration, London. An invitation was extended by the Dominion Government to the provincial governments to be represented at this Conference. Three of the provincial governments accepted the invitation and their representatives were appointed as advisers, as follows: Honourable W. R. Rollo, Minister of Labour for Ontario, Honourable T. H. Johnson, Attorney General for Manitoba, Honourable Antonin Galipeault, Minister of Public Works and Labour for Quebec, and Mr. Ferdinand Roy, K.C., Quebec. The employers' representative was Mr. S. R. Parsons of Toronto, and the Workers' delegate was Mr. Tom Moore, President of the Trades and Labour Congress of Canada. The employers' delegate was assisted by a technical adviser in the person of Mr. E. Blake Robertson, Ottawa, representative of the Canadian Manufacturers' Association, and the workers' delegate by Mr. Arthur Martel, Montreal, Vice-President of the Trades and Labour Congress of Canada.

The discussions of the Conference resulted in the adoption of Draft Conventions regarding the minimum age of trimmers and stokers on ships, medical inspection of children and young persons on ships, the use of white lead in painting, the right of association of agricultural workers, workmen's compensation for agricultural workers, the employment of children in agriculture, and a weekly rest in industrial undertakings. Recommendations were made concerning agricultural workers in relation to technical education, unemployment, social insurance, night work of women and children, maternity and housing conditions and concerning a weekly rest in commercial establishments.

At the time the present bulletin was prepared the authentic text of the Draft Conventions and Recommendations of the third International Labour Conference had not been received by the Canadian Government.

Employment on Board Ship

The Draft Convention relating to the employment of trimmers and stokers fixes the minimum age of these workers at eighteen on all steam-propelled ships except war or training ships, unless no persons over eighteen years of age are available, in which case young persons of sixteen years of age or over, if found physically fit after medical examination, may be employed as trimmers or stokers on vessels engaged in the coastal trade of India or Japan. Two such young persons are to be regarded as the equivalent of one man.

Another Draft Convention establishes compulsory medical examination for any young person under eighteen years of age who is employed on any vessel, except a war vessel or one on which only members of the same family are employed.

Use of White Lead in Painting.

The Draft Convention on the use of white lead in painting provides that the use of white lead in the internal painting of buildings shall be prohibited after six years, except in the case of railway stations and industrial establishments, if its use in such buildings is considered necessary by the competent authority after consultation with the employers' and workers' organizations concerned. Artistic painting is also excluded from the prohibition. The employment of boys under eighteen years of age and of all women and girls in any painting work of an industrial character involving the use of white lead is prohibited, but special arrange-

ments may be made with regard to apprentices. Other clauses in the Draft Convention provide for the regulation of the use of white lead in painting and for the notification of all cases of lead poisoning.

Weekly Day of Rest in Industrial and Commercial Establishments.

A Draft Convention was adopted providing for a rest period of at least twenty-four consecutive hours in each week for all workers in industry, subject to exceptions to be made by the Government after consultation with the organizations of employers and workers concerned and to be reported to the International Labour Office. Where the rest periods are suspended or reduced, compensatory rest is to be provided for as far as possible.

A Recommendation was made that similar provision be made for employees of commercial establishments.

Agricultural Workers.

The Conference adopted Draft Conventions establishing for all agricultural wage-earners the same rights of association and combination as are enjoyed by industrial workers, and extending to them the benefit of laws and regulations which provide compensation for personal injury by accidents arising out of or in course of their employment.

A third Draft Convention relating to agricultural workers prohibits the employment in agriculture of children under fourteen years of age during compulsory school hours. An exception is made in the case of children in technical schools under public supervision.

A Recommendation was adopted for the prevention of unemployment among agricultural workers by taking steps to bring more land into cultivation, by making temporary work available by the provision of transport facilities, by encouraging agricultural, co-operative and credit societies, by improved methods of agriculture, and by developing industries and supplementary forms of employment which would provide employment during the slack season.

It was also recommended that each state should endeavour to develop agricultural education and make such instruction available to the wage-earners in agriculture.

That laws and regulations establishing systems of insurance against sickness, invalidity, old age and similar social risks should be extended to cover agricultural workers on the same terms as those prevailing in the case of commercial and industrial workers, is another Recommendation.

Two Recommendations were passed regarding night work in agriculture; for the granting to children under fourteen years of age of rest during the night of not less than ten consecutive hours, and to women and young persons between fourteen and eighteen years of rest during the night of not less than nine hours. In the case of women, the hours for rest should be, if possible, consecutive; in the case of young persons, they must be consecutive.

It was further recommended that the Draft Convention adopted at the Washington Conference with regard to the employment of women in industrial and commercial undertakings, before and after childbirth, should be applied in the case of women employed in agriculture, and should include the right to a period of absence from work and to a grant of benefit provided either out of public funds or by means of a system of insurance.

A final Recommendation relating to agricultural wage-earners was for the provision for the moral and hygienic regulation of the living conditions of these workers when living with or without their families in buildings placed at their disposal by the employer.

**PART XIII OF THE TREATY OF PEACE BETWEEN THE ALLIED AND
ASSOCIATED POWERS AND GERMANY AND PROTOCOL.
SIGNED AT VERSAILLES, JUNE 28, 1919.**

LABOUR

SECTION I.

ORGANIZATION OF LABOUR.

Whereas the League of Nations has for its object the establishment of universal peace, and such a peace can be established only if it is based upon social justice;

And whereas conditions of labour exist involving such injustice, hardship and privation to large numbers of people as to produce unrest so great that the peace and harmony of the world are imperilled; and an improvement of those conditions is urgently required; as, for example, by the regulation of the hours of work, including the establishment of a maximum working day and week, the regulation of the labour supply, the prevention of unemployment, the provision of an adequate living wage, the protection of the worker against sickness, disease and injury arising out of his employment, the protection of children, young persons and women, provision for old age and injury, protection of the interests of workers when employed in countries other than their own, recognition of the principle of freedom of association, the organization of vocational and technical education and other measures;

Whereas also the failure of any nation to adopt humane conditions of labour is an obstacle in the way of other nations which desire to improve the conditions in their own countries;

The High Contracting Parties, moved by sentiments of justice and humanity as well as by the desire to secure the permanent peace of the world, agree to the following:

CHAPTER I.

ORGANIZATION.

ARTICLE 387.

A permanent organization is hereby established for the promotion of the objects set forth in the Preamble.

The original Members of the League of Nations shall be the original Members of this organization, and hereafter membership of the League of Nations shall carry with it membership of the said organization.

ARTICLE 388.

The permanent organization shall consist of:

- (1) a General Conference of Representatives of the Members and,
- (2) an International Labour Office controlled by the Governing Body described in Article 393.

ARTICLE 389.

The meetings of the General Conference of Representatives of the Members shall be held from time to time as occasion may require, and at least once in every year. It shall be composed of four Representatives of each of the Members, of whom two shall be Government Delegates and the two others shall be Delegates representing respectively the employers and the workpeople of each of the Members.

Each Delegate may be accompanied by advisers, who shall not exceed two in number for each item on the agenda of the meeting. When questions specially affecting women are to be considered by the Conference, one at least of the advisers should be a woman.

The Members undertake to nominate non-Government Delegates and advisers chosen in agreement with the industrial organizations, if such organizations exist, which are most representative of employers or workpeople, as the case may be, in their respective countries.

Advisers shall not speak except on a request made by the Delegate whom they accompany and by the special authorization of the President of the Conference, and may not vote.

A Delegate may by notice in writing addressed to the President appoint one of his advisers to act as his deputy, and the adviser, while so acting, shall be allowed to speak and vote.

The names of the Delegates and their advisers will be communicated to the International Labour Office by the Government of each of the Members.

The credentials of Delegates and their advisers shall be subject to scrutiny by the Conference, which may, by two-thirds of the votes cast by the Delegates present, refuse to admit any Delegate or adviser whom it deems not to have been nominated in accordance with this Article.

ARTICLE 390.

Every Delegate shall be entitled to vote individually on all matters which are taken into consideration by the Conference.

If one of the Members fails to nominate one of the non-Government Delegates whom it is entitled to nominate, the other non-Government Delegate shall be allowed to sit and speak at the Conference, but not to vote.

If in accordance with Article 389 the Conference refuses admission to a delegate of one of the members, the provisions of the present article shall apply as if that delegate had not been nominated.

ARTICLE 391.

The meetings of the Conference shall be held at the seat of the League of Nations, or at such other place as may be decided by the Conference at a previous meeting by two-thirds of the votes cast by the delegates present.

ARTICLE 392.

The International Labour Office shall be established at the seat of the League of Nations as part of the organization of the League.

ARTICLE 393.

The International Labour Office shall be under the control of a governing body consisting of twenty-four persons, appointed in accordance with the following provisions:

The governing body of the International Labour Office shall be constituted as follows:

Twelve persons representing the governments:

Six persons elected by the delegates to the Conference representing the employers;

Six persons elected by the delegates to the Conference representing the workers.

Of the twelve persons representing the governments eight shall be nominated by the members which are of the chief industrial importance, and four shall be nominated by the members selected for the purpose by the government delegates to the Conference, excluding the delegates of the eight members mentioned above.

Any question as to which are the members of the chief industrial importance shall be decided by the Council of the League of Nations.

The period of office of the members of the governing body will be three years. The method of filling vacancies and other similar questions may be determined by the governing body subject to the approval of the Conference.

The governing body shall, from time to time, elect one of its members to act as its chairman, shall regulate its own procedure and shall fix its own times of meeting. A special meeting shall be held if a written request to that effect is made by at least ten members of the governing body.

ARTICLE 394.

There shall be a director of the International Labour Office, who shall be appointed by the governing body, and, subject to the instructions of the governing body, shall be responsible for the efficient conduct of the International Labour Office and for such other duties as may be assigned to him.

The director or his deputy shall attend all meetings of the governing body.

ARTICLE 395.

The staff of the International Labour Office shall be appointed by the director, who shall, so far as is possible with due regard to the efficiency of the work of the office, select persons of different nationalities. A certain number of these persons shall be women.

ARTICLE 396.

The functions of the International Labour Office shall include the collection and distribution of information on all subjects relating to the international adjustment of conditions of industrial life and labour, and particularly the examination of subjects which it is proposed to bring before the Conference with a view to the conclusion of international conventions, and the conduct of such special investigations as may be ordered by the Conference.

It will prepare the agenda for the meetings of the Conference.

It will carry out the duties required of it by the provisions of this part of the present Treaty in connection with international disputes.

It will edit and publish in French and English, and in such other languages as the governing body may think desirable, a periodical paper dealing with problems of industry and employment of international interest.

Generally, in addition to the functions set out in this Article, it shall have such other powers and duties as may be assigned to it by the Conference.

ARTICLE 397.

The government departments of any of the members which deal with questions of industry and employment may communicate directly with the director through the representative of their government on the governing body of the International Labour Office, or failing any such representative, through such other qualified official as the government may nominate for the purpose.

ARTICLE 398.

The International Labour Office shall be entitled to the assistance of the secretary-general of the League of Nations in any matter in which it can be given.

ARTICLE 399.

Each of the Members will pay the travelling and subsistence expenses of its Delegates and their advisers and of its Representatives attending the meetings of the Conference or Governing Body, as the case may be.

All the other expenses of the International Labour Office and of the meetings of the Conference or Governing Body shall be paid to the Director by the Secretary-General of the League of Nations out of the general funds of the League.

The Director shall be responsible to the Secretary-General of the League for the proper expenditure of all moneys paid to him in pursuance of this Article.

CHAPTER II.

PROCEDURE.

ARTICLE 400.

The agenda for all meetings of the Conference will be settled by the Governing Body, who shall consider any suggestion as to the agenda that may be made by the Government of any of the Members or by any representative organization recognized for the purpose of Article 389.

ARTICLE 401.

The Director shall act as the Secretary of the Conference, and shall transmit the agenda so as to reach the Members four months before the meeting of the Conference, and, through them, the non-Government Delegates when appointed.

ARTICLE 402.

Any of the Governments of the Members may formally object to the inclusion of any item or items in the agenda. The grounds for such objection shall be set forth in a reasoned statement addressed to the Director, who shall circulate it to all the Members of the Permanent Organization.

Items to which objection has been made shall not however, be excluded from the agenda,

if at the Conference a majority of two-thirds of the votes cast by the Delegates present is in favour of considering them.

If the Conference decides (otherwise than under the preceding paragraph) by two-thirds of the votes cast by the Delegates present that any subject shall be considered by the Conference, that subject shall be included in the agenda for the following meeting.

ARTICLE 403.

The Conference shall regulate its own procedure, shall elect its own President, and may appoint committees to consider and report on any matter.

Except as otherwise expressly provided in this Part of the present Treaty, all matters shall be decided by a simple majority of the votes cast by the Delegates present.

The voting is void unless the total number of votes cast is equal to half the number of the Delegates attending the Conference.

ARTICLE 404.

The Conference may add to any committees which it appoints technical experts, who shall be assessors without power to vote.

ARTICLE 405.

When the Conference has decided on the adoption of proposals with regard to an item in the agenda, it will rest with the Conference to determine whether these proposals should take the form: (a) of a recommendation to be submitted to the Members for consideration with a view to effect being given to it by national legislation or otherwise, or (b) of a draft international convention for ratification by the Members.

In either case a majority of two-thirds of the votes cast by the Delegates present shall be necessary on the final vote for the adoption of the recommendation or draft convention, as the case may be, by the Conference.

In framing any recommendation or draft convention of general application the Conference shall have due regard to those countries in which climatic conditions, the imperfect development of industrial organization or other special circumstances make the industrial conditions substantially different, and shall suggest the modifications, if any, which it considers may be required to meet the case of such countries.

A copy of the recommendation or draft convention shall be authenticated by the signature of the President of the Conference and of the Director and shall be deposited with the Secretary-General of the League of Nations. The Secretary-General will communicate a certified copy of the recommendation or draft convention to each of the Members.

Each of the Members undertakes that it will, within the period of one year at most from the closing of the session of the Conference, or if it is impossible owing to exceptional circumstances to do so within the period of one year, then at the earliest practicable moment and in no case later than eighteen months from the closing of the session of the Conference bring the recommendation or draft convention before the authority or authorities within whose competence the matter lies, for the enactment of legislation or other action.

In the case of a recommendation, the Members will inform the Secretary-General of the action taken.

In the case of a draft convention, the Member will, if it obtains the consent of the authority or authorities within whose competence the matter lies, communicate the formal ratification of the convention to the Secretary-General, and will take such action as may be necessary to make effective the provisions of such convention.

If on a recommendation no legislative or other action is taken to make a recommendation effective, or if the draft convention fails to obtain the consent of the authority or authorities within whose competence the matter lies, no further obligation shall rest upon the Member.

In the case of a federal State, the power of which to enter into conventions on labour matters is subject to limitations, it shall be in the discretion of that Government to treat a draft convention to which such limitations apply as a recommendation only, and the provisions of this Article with respect to recommendations shall apply in such case.

The above Article shall be interpreted in accordance with the following principle:—

In no case shall any Member be asked or required, as a result of the adoption of any recommendation or draft convention by the Conference, to lessen the protection afforded by its existing legislation to the workers concerned.

ARTICLE 406.

Any convention so ratified shall be registered by the Secretary-General of the League of Nations, but shall only be binding upon the Members which ratify it.

ARTICLE 407.

If any convention coming before the Conference for final consideration fails to secure the support of two-thirds of the votes cast by the Delegates present, it shall nevertheless be within the right of any of the Members of the Permanent Organization to agree to such convention among themselves.

Any convention so agreed to shall be communicated by the Government concerned to the Secretary-General of the League of Nations, who shall register it.

ARTICLE 408.

Each of the Members agrees to make an annual report to the International Labour Office on the measures which it has taken to give effect to the provisions of conventions to which it is a party. These reports shall be made in such form and shall contain such particulars as the Governing Body may request. The Director shall lay a summary of these reports before the next meeting of the Conference.

ARTICLE 409.

In the event of any representation being made to the International Labour Office by an industrial association of employers or of workers that any of the Members has failed to secure in any respect the effective observance within its jurisdiction of any convention to which it is a party, the Governing Body may communicate this representation to the Government against which it is made and may invite that Government to make such statement on the subject as it may think fit.

ARTICLE 410.

If no statement is received within a reasonable time from the Government in question, or if the statement when received is not deemed to be satisfactory by the Governing Body, the latter shall have the right to publish the representation and the statement, if any, made in reply to it.

ARTICLE 411.

Any of the Members shall have the right to file a complaint with the International Labour Office if it is not satisfied that any other Member is securing the effective observance of any convention which both have ratified in accordance with the foregoing Articles.

The Governing Body may, if it thinks fit, before referring such a complaint to a Commission of Inquiry, as hereinafter provided for, communicate with the Government in question in the manner described in Article 409.

If the Governing Body does not think it necessary to communicate the complaint to the Government in question, or if, when they have made such communication, no statement in reply has been received within a reasonable time which the Governing Body considers to be satisfactory, the Governing Body may apply for the appointment of a Commission of Inquiry to consider the complaint and to report thereon.

The Governing Body may adopt the same procedure either of its own motion or on receipt of a complaint from a Delegate to the Conference.

When any matter arising out of Articles 410 or 411 is being considered by the Governing Body, the Government in question shall, if not already represented thereon, be entitled to send a representative to take part in the proceedings of the Governing Body while the matter is under consideration. Adequate notice of the date on which the matter will be considered shall be given to the Government in question.

ARTICLE 412.

The Commission of Inquiry shall be constituted in accordance with the following provisions:—

Each of the Members agrees to nominate within six months of the date on which the present Treaty comes into force three persons of industrial experience, of whom one shall be a representative of employers, one a representative of workers, and one a person of independent standing, who shall together form a panel from which the Members of the Commission of Inquiry shall be drawn.

The qualifications of the persons so nominated shall be subject to scrutiny by the Governing Body, which may by two-thirds of the votes cast by the representatives present refuse to accept the nomination of any person whose qualifications do not in its opinion comply with the requirements of the present Article.

Upon the application of the Governing Body, the Secretary-General of the League of Nations shall nominate three persons, one from each section of this panel, to constitute the Commission of Inquiry, and shall designate one of them as the President of the Commission. None of these three persons shall be a person nominated to the panel by any Member directly concerned in the complaint.

ARTICLE 413.

The Members agree that, in the event of the reference of a complaint to a Commission of Inquiry under Article 411, they will each, whether directly concerned in the complaint or not, place at the disposal of the Commission all the information in their possession which bears upon the subject-matter of the complaint.

ARTICLE 414.

When the Commission of Inquiry has fully considered the complaint, it shall prepare a report embodying its findings on all questions of fact relevant to determining the issue between the parties and containing such recommendations as it may think proper as to the steps which should be taken to meet the complaint and the time within which they should be taken.

It shall also indicate in this report the measures, if any, of an economic character against a defaulting Government which it considers to be appropriate, and which it considers other Governments would be justified in adopting.

ARTICLE 415.

The Secretary-General of the League of Nations shall communicate the report of the Commission of Inquiry to each of the Governments concerned in the complaint, and shall cause it to be published.

Each of these Governments shall within one month inform the Secretary-General of the League of Nations whether or not it accepts the recommendation contained in the report of the Commission; and if not, whether it proposes to refer the complaint to the Permanent Court of International Justice of the League of Nations.

ARTICLE 416.

In the event of any Member failing to take the action required by Article 405, with regard to a recommendation or draft Convention, any other Member shall be entitled to refer the matter to the Permanent Court of International Justice.

ARTICLE 417.

The decision of the Permanent Court of International Justice in regard to a complaint or matter which has been referred to it in pursuance of Article 415 or Article 416 shall be final.

ARTICLE 418.

The Permanent Court of International Justice may affirm, vary or reverse any of the findings or recommendations of the Commission of Inquiry, if any, and shall in its decision indicate the measures, if any, of an economic character which it considers to be appropriate, and which other Governments would be justified in adopting against a defaulting Government.

ARTICLE 419.

In the event of any Member failing to carry out within the time specified the recommendations, if any, contained in the report of the Commission of Inquiry, or in the decision of the Permanent Court of International Justice, as the case may be, any other Member may take against that Member the measures of an economic character indicated in the report of the Commission or in the decision of the Court as appropriate to the case.

ARTICLE 420.

The defaulting Government may at any time inform the Governing Body that it has taken the steps necessary to comply with the recommendations of the Commission of Inquiry or with those in the decision of the Permanent Court of International Justice, as the case may be, and may request it apply to the Secretary-General of the League to constitute a Commission of Inquiry to verify its contention. In this case the provisions of Articles 412, 413, 414, 415, 417, and 418 shall apply, and if the report of the Commission of Inquiry or the decision of the Permanent Court of International Justice is in favour of the defaulting Government, the other Governments shall forthwith discontinue the measures of an economic character that they have taken against the defaulting Government.

CHAPTER III.

GENERAL.

ARTICLE 421.

The Members engage to apply conventions which they have ratified in accordance with the provisions of this Part of the present Treaty to their colonies, protectorates and possessions which are not fully self-governing.

- (1) Except where owing to the local conditions the conventions are inapplicable, or
- (2) Subject to such modifications as may be necessary to adapt the convention to local conditions.

And each of the Members shall notify to the International Labour Office the action taken in respect of each of its colonies, protectorates and possessions which are not fully self-governing.

ARTICLE 422.

Amendments to this Part of the present Treaty which are adopted by the Conference by a majority of two-thirds of the votes cast by the Delegates present shall take effect when ratified by the States whose representatives compose the Council of the League of Nations and by three-fourths of the Members.

ARTICLE 423.

Any question or dispute relating to the interpretation of this Part of the present Treaty or of any subsequent convention concluded by the Members in pursuance of the provisions of this Part of the present Treaty shall be referred for decision to the Permanent Court of International Justice.

CHAPTER IV.

TRANSITORY PROVISIONS.

ARTICLE 424.

The first meeting of the Conference shall take place in October, 1919. The place and agenda for this meeting shall be as specified in the Annex hereto.

Arrangements for the convening and the organization of the first meeting of the Conference will be made by the Government designated for the purpose in the said Annex. That Government shall be assisted in the preparation of the documents for submission to the Conference by an International Committee constituted as provided in the said Annex.

The expenses of the first meeting and of all subsequent meetings held before the League of Nations has been able to establish a general fund, other than the expenses of Delegates and their advisers, will be borne by the Members in accordance with the apportionment of the expenses of the International Bureau of the Universal Postal Union.

ARTICLE 425.

Until the League of Nations has been constituted all communications which under the provisions of the foregoing Articles should be addressed to the Secretary-General of the League will be preserved by the Director of the International Labour Office, who will transmit them to the Secretary-General of the League.

ARTICLE 426.

Pending the creation of a Permanent Court of International Justice, disputes which in accordance with this Part of the present Treaty would be submitted to it for decision will be referred to a tribunal of three persons appointed by the Council of the League of Nations.

ANNEX.

FIRST MEETING OF ANNUAL LABOUR CONFERENCE, 1919.

The place of meeting will be Washington.

The Government of the United States of America is requested to convene the Conference.

The International Organizing Committee will consist of seven Members, appointed by the United States of America, Great Britain, France, Italy, Japan, Belgium and Switzerland. The Committee may, if it thinks necessary, invite other Members to appoint representatives.

Agenda:

- (1) Application of principle of the 8-hours day or of the 48-hours week.
- (2) Question of preventing or providing against unemployment.
- (3) Women's employment:
 - (a) Before and after child-birth, including the question of maternity benefit;
 - (b) During the night;
 - (c) In unhealthy processes.
- (4) Employment of children:
 - (a) Minimum age of employment;
 - (b) During the night;
 - (c) In unhealthy processes.
- (5) Extension and application of the International Conventions adopted at Berne in 1906 on the prohibition of night work for women employed in industry, and the prohibition of the use of white phosphorus in the manufacture of matches.

SECTION II.

GENERAL PRINCIPLES

ARTICLE 427.

The High Contracting Parties recognizing that the well-being, physical, moral and intellectual, of industrial wage-earners is of supreme international importance, have framed, in order to further this great end, the permanent machinery provided for in Section I and associated with that of the League of Nations.

They recognize that differences of climate, habits and customs, of economic opportunity and industrial tradition, make strict uniformity in the conditions of labour difficult of immediate attainment. But, holding as they do, that labour should not be regarded merely as an article of commerce, they think that there are methods and principles for regulating labour conditions which all industrial communities should endeavour to apply, so far as their special circumstances will permit.

Among these methods and principles, the following seem to the High Contracting Parties to be of special and urgent importance:

First.—The guiding principle above enunciated that labour should not be regarded merely as a commodity or article of commerce.

Second.—The right of association for all lawful purposes by the employed as well as by the employers.

Third.—The payment to the employed of a wage adequate to maintain a reasonable standard of life as this is understood in their time and country.

Fourth.—The adoption of an eight-hours day or a forty-eight hours week as the standard to be aimed at where it has not already been attained.

Fifth.—The adoption of a weekly rest of at least twenty-four hours, which should include Sunday wherever practicable.

Sixth.—The abolition of child labour and the imposition of such limitations on the labour of young persons as shall permit the continuation of their education and assure their proper physical development.

Seventh.—The principle that men and women should receive equal remuneration for work of equal value.

Eighth.—The standard set by law in each country with respect to the conditions of labour should have due regard to the equitable economic treatment of all workers lawfully resident therein.

Ninth.—Each State should make provision for a system of inspection in which women should take part, in order to ensure the enforcement of the laws and regulations for the protection of the employed.

Without claiming that these methods and principles are either complete or final, the high contracting parties are of opinion that they are well fitted to guide the policy of the League of Nations; and that, if adopted by the industrial communities who are members of the League, and safeguarded in practice by an adequate system of such inspection, they will confer lasting benefits upon the wage-earners of the world.

If you are in need of high grade help why not notify
your local office of the

EMPLOYMENT SERVICE OF CANADA

You will be able to select from the labour reserve of the community, and indeed, from the entire country if necessary, and you will not be limited in your choice to your own local reserve. You will dispense with the crowd at your factory gate.

You will save for the workers of Canada the fees paid to private employment agencies.

Only competent workers will be referred for interview.

Employment offices in the following cities are at your service:

NOVA SCOTIA:

Amherst,
Halifax,
New Glasgow,
Sydney.

NEW BRUNSWICK:

Chatham,
Moncton.

QUEBEC:

Hull,
Montreal,
Quebec,
Sherbrooke,
Three Rivers.

MANITOBA:

Brandon,
Dauphin,
Portage la Prairie,
Winnipeg.

ALBERTA:

Calgary,
Camrose,
Drumheller,
Edmonton,
Lethbridge,
MacLeod,
Medicine Hat.

ONTARIO:

Belleville,
Brantford,

THE LABOUR GAZETTE

Prepared and edited in the Department of Labour, Ottawa

MINISTER—THE HONOURABLE JAMES MURDOCK

DEPUTY MINISTER—F. A. ACLAND.

Volume 22

MARCH, 1922.

Number 3

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

The month in brief

In addition to the regular monthly articles, this issue of the LABOUR

GAZETTE contains articles covering the industrial disputes and fatal industrial accidents which occurred during the year 1921. The issue also contains among other features the text of a further judicial decision respecting picketing in Canada, the text of an order-in-council under which the Dominion Government assumes liability for compensation for industrial accidents that may occur to disabled veterans, and an article dealing with the Kansas Court of Industrial Relations.

At the beginning of February the percentage of unemployment among members of trade unions stood at 13.9 as compared with 15.1 at the beginning of January and with 13.1 at the beginning of February, 1920. Many of the locals making returns continued to indicate short time. According to reports received from over 6,000 employers, employment registered expansion during February as compared with January, but the situation was still somewhat less favourable than during the corresponding period of last year.

The average cost of a weekly family budget of 29 staple foods in some 60 cities was \$10.60 at the beginning of February as compared with \$11.03 in January; \$14.08 in February, 1921; \$15.77 in February, 1920; and \$7.75 in February, 1914. Including the cost of fuel and rent with that of food the figures aver-

aged \$21.06 for February, as compared with \$21.52 for January; \$24.85 for February, 1921; \$24.71 for February, 1920; and \$14.54 for February, 1914. In wholesale prices the index number rose slightly, standing at 229.5 for February, as compared with 227.7 for January; 270.1 for February, 1921; 343.5 for February, 1920; and 136.6 for February, 1914.

The time loss due to industrial disputes during February was less than during January, but greater than during February, 1921. There were in existence during the month 25 strikes, involving about 2,431 workpeople with an estimated time loss of 63,590 working days. Eight of these strikes commenced during February. Two of the strikes commencing during February, and two commencing prior to February were terminated during the month, leaving 21 strikes, involving about 2,047 workpeople, on record at the end of the month.

Proceedings under the Industrial Disputes Investigation Act

During the month of February the Department received reports from two Boards of Conciliation and Investigation established to deal with disputes between

(1) employers, members of the Association of Canadian Building and Construction Industries, Ottawa Branch, and their employees, members of the Ottawa District Council of Carpenters

and Joiners; and (2) employers, members of the Association of Canadian Building and Construction Industries, Ottawa Branch, and their employees, members of the Bricklayers International Union No. 7.

Five applications were received for the establishment of Boards.

Jottings

The following conventions of Canadian and international labour organizations will be held during the second quarter of 1922; Brotherhood of Dominion Express Employees, at Vancouver, B.C., in April; Saskatchewan Brotherhood of Steam and Operating Engineers, at Moose Jaw, Sask., in May; Canadian Association of Stationary Engineers, at Kitchener, Ont., on June 27 to 29; Brotherhood of Railroad Trainmen, at Toronto, Ont., in May; Order of Railroad Telegraphers, at Cleveland, Ohio, in May; International Ladies Garment Workers' Union, at Cleveland, Ohio, on May 1; Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, at Dallas, Texas, on May 1; Amalgamated Association of Iron, Steel and Tin Workers of North America, at Detroit, Michigan, on May 1; Brotherhood of Locomotive Firemen and Enginemen, at Houston, Texas, on May 8; Amalgamated Clothing Workers of America, at Chicago, Ill., on May 8; American Federation of Musicians, at Grand Rapids, Mich., on May 8-14; American Federation of Labour, at Cincinnati, Ohio, on June 12.

Two supplements were issued with the February number of the LABOUR GAZETTE, one entitled "Canada and the International Labour Conference, Bulletin No. 5, Industrial Relations Series," and the other, "Wages and Hours of Labour in Canada, September, 1920, and September, 1921." A limited number of copies of these supplements are available for distribution.

The first of a series of bulletins has recently been issued by the Director of Technical Education, Department of Labour, Ottawa. The purpose of the bulletins is to distribute to all those

engaged in the organization, administration and operation of vocational education programmes, information which will assist them in solving their present problems and in perfecting plans for future developments. The bulletins have been issued by the Department in compliance with a resolution adopted at the National Conference on Technical Education of October, 1920.

The Saskatchewan Grain Growers' Association recently presented the following resolution to the provincial Commissioner of the Bureau of Labour: "Resolved, that this convention of Saskatchewan Grain Growers ask the executive to co-operate with the Government employment service and with representatives of the organized farmers of the other provinces with a view to regulating the supply of farm labour and the standardization of farm wages, and for this purpose it is recommended that a conference be held prior to the commencement of each employment season."

The Vancouver Trades and Labour Council on February 28 presented to the City the following resolution, which was referred for consideration to a committee of the Council: "That no license be granted to any business operated by Asiatics in which white help is employed, or to any business operated by white people in which Asiatics are employed, and that licenses be issued only to Canadian citizens and absolutely refused to persons not having the franchise."

The Manitoba Legislature, on February 28, by a vote of 30 to 13, defeated a motion to allocate all government printing to printing offices running their plants on the basis of the 8-hour day with a half holiday on Saturday, and with wages as awarded by the Joint Council of Industry. Another motion, defeated by 26 to 20, suggested that the Government make arrangements to regulate working and living conditions in lumbering, mining and other industries of a similar nature, and have camps inspected periodically by inspectors of the Bureau of Labour.

As the result of a year's organization in "Safety First" work, the Alcoma Steel Corporation states it has reduced accidents by 69 per cent, lost time by 72 per cent, and compensation by over 61 per cent.

The Trades and Labour Council of Guelph, Ont., decided on March 1 to ask the Provincial Legislature to enact legislation forbidding any person lending money to charge interest at a rate exceeding 5 per cent. Another resolution favoured a moratorium act on real estate and home purchase agreements, to remain in force for one year, as a measure of relief to those who purchased houses during the war on instalments and who, owing to unemployment, are now unable to meet their payments and are compelled to mortgage their homes or lose their equity.

A deputation representing the Journeyman Barbers' Federation of Ontario recently submitted to the Provincial Minister of Labour the draft of a proposed "Barbers Act," with a request that legislation should be passed on the lines suggested. It was proposed that applicant barbers be examined before a board to be appointed by an order-in-council, the board to determine whether or not the applicant has studied the occupation for three years as an apprentice, and whether he has taken a trade course at a recognized school for barbers. Applicants would also be required to prove themselves free from all contagious and infectious disease. Transfers from other provinces would be recognized. It is also proposed that all barbers in Ontario be licensed.

A delegation from the Manitoba Employers' Association interviewed the Provincial Premier on February 24 to protest against proposals by labour members of the Legislature that the monthly payments to widows under Workmen's Compensation be raised from \$30 to \$40, and that widows with children under 16 receive \$15 for each child, instead of \$7.50 as at present. A government bill is now before the Legislature to increase the amount of compensation for widows and children.

Resolutions passed by the Catholic and National Unions at a number of conventions during the past year were presented to the Minister of Public Works and Labour for Quebec on February 8. Among these were resolutions asking for the extension of Workmen's Compensation to include salaried men as well as wage earners and for a law making compulsory the decision of an arbitration board in disputes involving policemen and firemen. The minister promised consideration of the proposals.

A delegation of unemployed workers recently waited on the Civic Unemployment Committee at Victoria, B.C., to request that relief workers be included under the Workmen's Compensation Act.

The Alberta Workmen's Compensation Board recently issued a circular letter to all employers coming under the Act, in which it was proposed to institute a merit system of rating of employers. This system, similar to that now existing in Ontario, would differentiate between individual employers in the same industry, preference being given in regard to the amount of assessment levied on those employers whose workers showed less liability to accident. The proposal of the Board to apply the merit system was suspended, by a decision reached during February, and the existing plan by which assessments are increased uniformly throughout industries showing a large number of accidents will remain in operation.

The publishers of Pulp and Paper Magazine have announced that they have secured the services of a director of extension courses for the training and education of apprentices in all the industries served by the journals issued from the Garden City Press, Gardenvale, Que.

According to recent statistics compiled by the Industrial Establishment inspectors, Montreal, there are 13,188 children between the ages of 14 and 16 employed in the various industries of Montreal, most of whom are foreigners.

At the annual convention of Alberta School Trustees held at Edmonton on February 2, a resolution was adopted

confirming the minimum wage for teachers as set out in the school ordinance at \$840. The minimum as set by the Teachers' Alliance was \$1,200.

At a convention held recently at Calgary, Alta., of employers in the building and construction industries of Western Canada, a resolution was passed urging the adoption of a uniform Workmen's Compensation law for the various provinces.

The federal ministry of Australia has decided to create an industrial hygiene branch of the Department of Health.

It is stated that trade unionism in South Africa has spread considerably since the establishment of the Transvaal Federation of Trades in 1911 and the South African Industrial Federation in 1914. The latter Federation held the first trade union congress in 1917. The Labour Clauses in the Peace Treaty are stated to have acted as a stimulus to the movement. There are now 90 unions in South Africa with a membership of 132,784.

The Italian Congress of Industrial Medicine will hold its fifth national congress at Florence in June next. Reports will be submitted on (a) Rural hygiene since the war, (b) Ancient and modern theories on lead poisoning, (c) Organization of shifts in industry, (d) Amendment of industrial accident legislation, (e) Prevention of invalidity due to disease.

**Labour
delegation
to Dominion
Government**

On February 24 a delegation of the Trades and Labour Congress of Canada waited on the Dominion Government and submitted its programme for labour legislation with the request that action be taken along the lines proposed. The following proposals were made:

- (1) (a) That the government take steps to have the conventions of the International Labour Organization accepted as Treaty obligations and therefore brought within the jurisdiction of the Federal Government.
- (b) That action be taken to give legislative effect to all, or such items, as may be decided to be within the jurisdiction of the Dominion Government.
- (2) (a) To provide for proportional representation in group constituencies and transferable vote in single constituencies.
- (b) To make election day a public holiday throughout the Dominion.
- (c) To abolish forfeiture of election deposits.
- (d) To restore the right of railroad workers to offer themselves for political office without forfeiting their positions or seniority on the National railroads and correct the injustice created by what has been known as "the Hanna Order."
- (e) Repeal of Clause 10, Franchise Act, 1920, which prohibits trade unions and similar organizations contributing to election campaign funds.
- (3) (a) Repeal of Bill 03 (1919), so as to restore the right of British citizens now liable to arbitrary deportation.
- (b) Exclusion of Asiatics.
- (c) Endorsation of the creation of a Central Empire Emigration Board, on which Labour should be represented, with power to supervise advertisements and other immigration activities in Great Britain.
- (d) Prevention of labor recruiting outside Canada by private persons or companies.
- (e) The prohibition of all immigration from European countries for a period of not less than two years with the execution only of exempted classes.
- (4) To provide for Dominion-wide unemployment insurance embodying the following principles:—
 - (a) Creation of a Federal Fund, from which payments may be made to unemployed, and under-employed persons.
 - (b) This fund to be raised by assessment on the payrolls of undertakings whose workers are covered by such insurance and added to by Dominion and if possible Provincial public funds.
 - (c) Payments to be made to workers during actual unemployment or when employed for fixed periods for less than seventy-five per cent of their regular working hours.
 - (d) No employer to be allowed to discharge numbers of workers without due notice to the Employment Service of Canada so as to give them an opportunity to provide for their redistribution.

- (e) The Government to have power to investigate as to the real need of discharge of workers and consequent limitation of production.
 - (f) No employer to be allowed to discharge workers for lack of work, until the hours of such industry have been reduced to at least half of the normal working hours.
 - (g) Workers in this way under-employed to have their wages supplemented from the Federal Fund up to not less than seventy-five per cent of their normal earnings.
 - (h) This Act to apply to workers under public bodies as well as to private employers.
 - (i) Use of the Advisory Councils of the Employment Service should be made for the carrying out of the Act, and power given them to deal with matters relating to the co-ordinating of public works, and perhaps their partial financing from the fund, in order to avoid unemployment.
- (5) Amendments to the Criminal Code,—
- (a) To legalize peaceful picketing.
 - (b) Revision of the Criminal Code to eliminate section referring to seditious conspiracy, etc., and also the words "force" and "terrorism" passed during the "panicky session" of Parliament, 1919.
 - (c) Amendments to define sympathetic strikes by inserting in Section 2 (38) "workman means all persons employed in trade or industry whether or not in the employment of the employer directly involved in the trades agreement."
- (6) Provision for collective bargaining and democratic development within public services.
- (a) By the consolidation of all nationally owned and controlled railroads and the placing of a worker's representative on the Board of Management.
 - (b) The establishment of closer co-operation in the Civil Service by the establishment of national and departmental councils along similar lines as provided in the Whitley (British) report and as at present obtaining in the British Civil Service.
- (7) Legislation providing for payment of pensions to old and needy citizens of Canada.
- (8) The creation of an Independent Tariff Commission on which Labour shall have representation so as to remove to the fullest degree the question of tariff from the political arena.
- (9) An Act to clearly define the fair wage

resolutions of 1900 and 1907 and to extend the same to cover the manufacture of supplies and equipment for the Government or any of its commissions and services. This is requested in view of the constantly recurring evasions of the present fair wage provisions, the lack of definition as to what sections of Government contracts they apply to, and the apparent lack of authority of the Labour Department in these matters because of absence of definite legislation.

- (10) We urge that your Government should recognize the importance of the work being undertaken by the Honorary Advisory Council for Scientific and Industrial Research and that measures be taken to provide proper facilities for the continuation and development of this Council's activity.
- (11) We request legislation to give effect to the reforms incorporated in the report of the Special Advisory Committee on Prison Reform (1921).
- (12) Abolition of the Senate as a non-elective body.
- (13) Protection against infringement and misuse of Union Labels, by allowing for their registration in Canada.

Various other recommendations were made among which were the following:

That all public utilities, railroads, shipping, etc., now owned by the Dominion Government be retained; and that a policy of further public ownership and control of national resources and public utilities be followed.

That measures be inaugurated to aid the development of the Co-Operative Movement in Canada.

That full inquiry be made into the capitalization of industry and measures taken to protect the public against the evils of over-capitalization.

That immediate steps be taken to cope with the present acute unemployment situation by the undertaking of necessary public works, etc., and in this respect we draw to your attention the report adopted at our Winnipeg (1921) Convention, printed on page 200 of the proceedings.

Measures be taken to more closely co-ordinate the work of the Labour Department and Immigration Department and in case the Immigration Department ceases to be presided over by a Minister then the transference of the Immigration Department to the jurisdiction of the Minister of Labour.

Continued adherence and support to the League of Nations and the International Labour Organization created under the Treaty of Versailles, 1919.

Exemptions

In reply to a question in the Manitoba Legislature on March 7, it was officially stated that during the fiscal year ending November 30, 1921, several firms in the province had been exempted temporarily from the general rules and regulations of the Minimum Wage Act, the reason for this action being given as follows:

During the fiscal year several applications for short time permits were made by various firms to the Minimum Wage Board. Upon an investigation being made it was found that it was very difficult for any females to get employment, and further, an investigation among the women workers elicited the information that it was the desire of the majority of the particular workers affected to work short time rather than that any of their number should be laid off. Accordingly permits were issued to several firms, granting them the privilege of working short time. The permits issued were for periods not longer than thirty days, and were granted on the distinct understanding that during the life of each permit no overtime could be worked, and that no new hands could be employed. Upon signed application from the employees of the Woolworth stores, a permit was granted exempting them from the weekly half holiday provided for in the regulations, on the condition that the stores be closed on Saturdays at 5 p.m. during the summer months, and that in no case could the number of hours worked per week exceed forty-eight. Another permit was granted to an employer in connection with the employment of a physical defective.

The minimum wage for women in Ontario

It is claimed that the recent orders of the Ontario Minimum Wage Board governing the wages paid to female employees in retail stores have resulted in the substi-

tution of boys for girls, in certain occupations, in some stores. An amendment to the Minimum Wage Act is under consideration which would provide for the payment of minimum wages to boys engaged in stores.

The Ontario Minimum Wage Board recently concluded an inquiry into the wages of women employed in the textile industry in Toronto, with a view to fixing a minimum scale. Arrangements have now been made to hold a similar enquiry in Hamilton. The Board has also commenced public hearings in connection with a proposed minimum wage scale for girl telephone operators in the smaller towns, villages and country districts of the province.

Report on Mechanics' Lien Act of Ontario

At the last session of the Ontario legislature, a committee was appointed to consider a bill "respecting Liens of Mechanics; Wage Earners, Supply Men and others," this committee being authorized to sit during the recess and report to the House at the next session. The committee accordingly presented their report at the present session on March 3. After hearing the opinion of representatives of the interests affected, the committee decided that the bill, which was founded on the laws of Ohio and Michigan, was for the most part inapplicable to conditions existing in Ontario. Its main provision was that the liability of the owner of property to see to the payment of all claims should be extended from 15 and 20 per cent of the contract price to 100 per cent. The committee came to the conclusion that the law as it stands, with certain amendments, provides adequate protection to contractors, sub-contractors and material men, as well as wage earners. The suggested amendments, which would simplify procedure under the act, are embodied in a bill now before the provincial legislature.

**Nova Scotia
Fishermen and
Workmen's
Compensation**

A resolution was un-animously passed by owners of fishing vessels and fishermen, at a recent meeting held at Lunenburg, N. S., protesting against the payment of any monies under the Workmen's Compensation Act "until such time as the vessels earn from the sale of their respective catches of fish sufficient monies to pay this claim and other amounts, and that in view of the fact that the fishing industry is a co-operative one and that the men are partners in the venture, and not paid employees, the local representative be asked to arrange this matter with the proper authorities; also that the said representatives be asked to arrange that the vessels' certificates be not cancelled in the meantime."

The Nova Scotia Workmen's Compensation Act of 1915, as amended in 1919, provides in respect to the industry of fishing that a member of the crew of a ship registered in Nova Scotia under an agreement to prosecute a fishing voyage in the capacity of a shoresman, or who agrees to accept in payment of his services a proportion of the proceeds of the venture, shall be considered to be a workman within the meaning of the act. At the session of the Legislature held in 1921 the act was further amended in respect to the annual "wages" estimated for the purposes of assessment under the act to be earned by the members of the crew of such a vessel, the figure being reduced from \$1,200 to \$780. Assessments under the act are borne wholly by the employers.

**Pensions for
teachers in
New Brunswick**

The speech from the Throne at the opening of the legislature of New Brunswick on March 2, announced that the school teachers of the province had signified their willingness to co-operate with the Government in the matter of pensions by an annual

contribution on their part, and without materially increasing the financial burdens of the province, and that legislation would be introduced during the session which would provide for a more liberal retiring compensation "for those engaged in this preeminent public service." The speech also stated that vocational and industrial education through day, evening, and itinerant schools had made substantial progress during the past year. Amendments to the Public Health Act were promised, as well as a school consolidation act and other measures affecting public welfare.

**Industrial
Relations Courts
proposed in
United States**

In December last the New York Board of Trade and Transportation adopted a resolution authorizing the drafting of a bill for submission to the State legislature, aiming to provide peaceful solution by arbitration of industrial disputes affecting the public interest. The resolution was, in part, as follows: "Whereas we believe that the most practicable means to secure this end is through a court of justice especially established and with power of final adjudication to which, in case of dispute, all parties at interest—employer, employee and the public—can freely and must resort, such a court as that now established in the State of Kansas and known as the Court of Industrial Relations, which has already in a large degree demonstrated its efficient and beneficent usefulness, therefore, be it resolved, by the New York Board of Trade and Transportation, that we endorse the principle of the law creating the court of industrial relations in the State of Kansas and hereby request and authorize the committee of interests of employers and labour to take steps to have drafted a bill for a similar law adapted to conditions in the State of New York and to co-operate with other organizations to secure the enactment of the same." The proposed bill has since been introduced in the New York State

Senate and referred to the committees on labour and industry of both houses of the legislature which will consider it jointly in the near future.

It is also reported that a bill will shortly be submitted to Congress providing for the creation of an industrial court to adjudicate labour disputes in basic industries such as railroads, coal, iron and steel. The proposal is said to have the approval of the President, who gave a general endorsement to such a measure in his annual address to Congress.

“Super wage” to family heads in France During the past two years employers in France have been experimenting with a system providing for the payment of a “super wage” to employees who are the heads of families. The trial of the system early revealed an objection, which, however, now seems to have been satisfactorily overcome. It showed that employers were tempted, because of the smaller wage payment required, to hire unmarried or childless married men, rather than heads of families, and thus the very plan which was designed to encourage the raising of larger families, tended to discourage this, because the heads of larger families were likely to find it more difficult to secure work. Plans have now been worked out to create depositories or compensation bureaus representing the employers of the same industry or the same locality, in order to distribute equally the expense of the super-wage. Each employer contributes, not according to the number of family heads in his employ, but according to the total number of workers he employs, in order to obviate the danger of making bachelors preferred as employees.

In practice, the compensation bureau acts as a clearing house. Each employer pays the super-wage to his family heads, then pays to or receives from the bureau

the difference between that payment and his proportionate share of the total expense of the association, determined by the bureau from reports submitted by the individual members.

At a recent congress in Paris on this subject, it was claimed that the success of the family extra wage in France had been proved by the growth of the movement among employers, in spite of the fact that it is wholly optional with them. The rapid growth all over France of compensation bureaus, and the simultaneous growth of the number of their subscribers, shows at once that they are meeting a pressing need. It was stated that in July, 1921, there were 71 bureaus distributing annually 75 million francs in super-wage allowance to a million workers.

Similar systems under which employers grant super-wages or bonuses to heads of families in respect of children below a certain age have been adopted during recent years in Holland and several other countries.

Agricultural wage agreement in Great Britain

A recent press despatch states that at the present time there are twenty-three farm wages agreements in operation in Great Britain, and that two of these are long-period agreements effective over large agricultural areas and covering the whole season up to the end of the harvest. The principal clauses of these long-period agreements are as follows: (1) The wages of male agricultural labourers of 21 years and over shall be 32s. for a week of 48 hours from January 18, 1922, until March 3, 1922, and 31s. for a week of 50 hours from March 4, 1922, until October 6, 1922; (2) The overtime rate from January 18, 1922, until March 3, 1922, shall be 8½d. per hour, and from March 4 until October 6, 8d. per hour; (3) The ordinary time and overtime rates only shall apply during

hay and harvest periods; (4) There shall be a guaranteed week of 48 hours from January 18, 1922, until March 3, 1922, and of 50 hours from March 4, 1922, until October 6, 1922, the wages being payable for the whole week whether all the hours are worked or not. Provision is also made for the wages of workers under 21 years of age.

**Housing law
for workers in
New Zealand**

The New Zealand government housing law for the working classes, which has been in force since 1919, provides that any worker whose normal income does not exceed \$1,500 may apply to the government for a house. The request will be granted on payment of \$100, the remaining payments to spread over a period of 30 years at interest of 4½ per cent. About \$23 a month is the average payment of principal and interest. The applicant selects the locality in which he desires to live, and the government will, if it does not own land in the locality, buy the lot selected and build for him. A set of designs in concrete, brick or wood is provided from which the applicant may select a design, or if he has a design of his own it will receive consideration. Provision is also made for applications from building companies, but their dividends are limited, and provision is made against improper use of facilities granted. Employers may also obtain loans to provide dwellings for their employees, and provision is made against the charging of unfair rents.

**Company
stores in
United States**

The Metropolitan Life Insurance Company of New York has issued a report on company and co-operative stores, prepared by the company's Policyholders' Service Bureau. The object of the report is "to bring to the attention of employers of labour the plans by which a number of companies are hoping to reduce the cost of the necessities of life for their employees." It is stated, however, that there seems to be a decreasing interest in the plant co-operative store,

an investigation showing that in the spring of 1921 only about four-fifths of the plans recently in operation were being continued. This is attributed in some cases to the difficulty of competing with chain stores. Six types of stores or purchasing plans were described: (1) The company store where goods are sold to the employee at cost plus a small amount for overhead. (2) The co-operative store managed by the employees but with the employer furnishing the rent heat and light and sometimes the salary of the manager. (3) The company-purchase plan under which orders are taken by the company and the goods are obtained from the wholesaler at reduced prices without any store being kept. (4) The co-operative purchase plan under which the taking of orders and wholesale buying are done by the employees themselves. (5) The company discount plan, under which liberal discounts on goods handled by the company are given to their employees when buying for their personal or family use. (6) The outside discount plan by which arrangements are made for discounts on goods purchased in local shops.

The most successful stores were those connected with plants having a thousand or more employees, but plants with only 500 workers may be successful if the employees buy a large proportion of their supplies at the store. Some participation by the employees in the management of the store was considered a very real advantage, though for practical reasons it was not always possible for the employees to be responsible for the management.

The report gives detailed accounts of co-operative purchase plans of 18 companies. Various effects of the company store are noted. One store caused local dealers to reduce prices, others caused them to go out of business or abandon their delivery system. In another case it was claimed that the store had caused a reduction in labour turnover.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION.

I.—The Labour Market, Strikes, Prices.

The Labour Market

The curve of employment based on returns from employers showed an upward tendency during February. The downward movement manifested in the latter part of January was not continued during February and a considerable increase in activity was registered. Employment, however, was still much below the level of last year. Trade unions reported more activity at the beginning of February than in January but members were slightly less fully employed than in December. The business transacted by offices of the Employment Service during January increased to some extent, though there were fluctuations in different localities. The number of applicants registering, placements made and vacancies notified by employers was on a higher level than in December.

Fortnightly reports from employers to the Dominion Headquarters of the Employment Service of Canada for the period January 16 to February 15 showed an increase

in the volume of employment afforded, expansion in the early part of February offsetting declines reported in the latter part of January. All provinces shared in this increase, the gains in Quebec being the most pronounced. In comparison with the corresponding period of last year conditions were not as favourable, the index number of employment being over 7 points lower. The iron and steel industry, owing to the temporary closing of railway car and other shops, registered a reduction in activity during the first fortnight. This depression did not extend into February and expansion was recorded which more than counterbalanced these losses. The crude, rolled and forged and heating appliance branches of the

industry also reported substantial gains in employment. Firms in the textile group continued to show noteworthy increases, especially in establishments manufacturing garments, personal furnishings, hosiery and knit goods. Slightly more activity in textile factories was evidenced during the period under review than in the corresponding period of 1921. The lumber group registered an increase in activity, nearly 1,700 persons having been added to the staffs of the firms making returns. Sawmills and furniture factories afforded more employment, the increase in the former indicating seasonal expansion. Tobacco factories were much busier, especially during the latter part of January, when many plants re-opened after inventory shutdowns. The edible plant products group continued to record expansion, mainly in the sugar and biscuit divisions. Increased activity on a smaller scale was registered in the rubber, pulp and paper, electrical apparatus, non-ferrous metal, electric current, chemical, leather, mineral and clay, glass and stone group. On the other hand, considerable contraction was recorded during the period under review in highway construction, especially in the province of Ontario. Railway construction and operation also showed pronounced seasonal depression. The communication and street railway groups reported lessened activity throughout the period. Retail stores reduced their staffs by nearly 700 persons, while wholesale establishments also registered reductions, but on a much smaller scale.

In spite of the large increase in employment in the first fortnight in February, the situation continued to be less favourable than in the corresponding period of last year. In this comparison increased activity was reported in the leather, water transportation, metallic ores, street railway, textile, rubber,

lumber and edible plant products groups. On the other hand, contractions in operations were reported in the iron and steel, clay, glass and stone, pulp and paper, non-ferrous metal, railway construction, railway transportation and wholesale trade divisions.

At the beginning of February an increase in employment was reported by

TRADE	1,525 trade unions with
UNION	a membership aggregat-
REPORTS	ing 159,280 persons of
	whom 22,059 were un-
	employed. This repre-

sented a percentage of 13.9 as compared with 15.1 in January, 1922, and with 13.1 at the beginning of February, 1921. (Unemployment as used here has reference to involuntary idleness due to economic causes; persons occupied in work other than their own trade, or who are idle because of sickness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to those unions reporting.) The slight improvement over January was recorded chiefly in the manufacturing industries, especially in the textile and iron and steel groups. Unions in Quebec and British Columbia reported more employment than at the end of January, but the situation in the other provinces was less favourable. As compared with February, 1921, increases in employment were shown in Ontario and, in a lesser degree, in Alberta. In the remaining provinces more idleness was reported, Manitoba in particular showing slackness. The manufacturing industries registered greater activity than in the preceding month, the percentage of unemployment being 15.8 as compared with 26.5 in January. Improvement in the situation was reported in the food group, especially by sugar refinery workers. The textile trades were much busier than in the preceding month and

also than in the corresponding month of last year, employment particularly among garment workers being in greater volume. The iron and steel group reported increased activity, while employment for pulp and paper workers and glass bottle blowers was slacker. The mining group as a whole afforded less employment than in the preceding month. The situation among the coal miners in Nova Scotia was not as favourable, but asbestos miners in Quebec were busier. Unions in the transportation group reported 7.9 per cent of their members as unemployed as compared with 6.0 per cent in January, and with 8.9 per cent in February of last year. The decrease in activity in comparison with January occurred chiefly among steam railway workers, trainmen, firemen, and especially among express employees. Street and electric railway employees were less fully engaged than in the preceding month. Employment in the building and construction group was at a lower level than at the beginning of January and also than in the corresponding month of last year, 32.8 per cent of the members being unemployed as compared with 25.9 in the previous month and with 30.8 in February, 1921. Over half the idle members were reported by unions in the province of Ontario, although the percentage of unemployment in that province was slightly lower than for Canada as a whole. With the exception of electrical workers, tile layers, lathers and roofers, all tradesmen in this group reported reduced activity as compared with January. Employment for fishermen continued to be slack, but lumber workers and loggers were slightly busier. Stationary engineers were hardly as fully employed as in January. Barbers were slightly less active while hotel and restaurant employees were busier. Theatrical stage employees reported practically the same percentage of unemployment as in the previous month.

Reports from the offices of the Employment Service of Canada show that during the month of January, 1922, there were 42,233 applications for employment (of which 34,238 were from men and 7,995 from women). Vacancies notified by employers to the Service numbered 23,000, (of which 16,112 were for men and 6,888 for women). During the month the offices made 22,551 references to employment and effected 11,825 placements in regular and 9,118 placements in casual work. (Of the placements in regular employment 9,427 were of men and 2,398 of women.) At the end of December, 1921, applications and placements had declined to points lower than at any time since 1919 and considerably lower than at the same time a year ago. Vacancies had fallen off very rapidly during the latter part of 1921, but during the last week of the year and the first half of January, 1922, an increase in demand was indicated, followed by a slight reduction during the latter part of the month. Applications and placements also mounted during the first half and declined during the latter half of January, 1922, but the earlier expansion in each case more than offset the later reduction.

During the first half of January, 1922, the average number of applications made daily to the offices rose to 1,810 from 1,263 during the holiday season in December. This may be compared with an average of 1,595 registered daily during the same period of 1921. Vacancies notified by employers to the Service averaged 1,001 daily during this period, as compared with 812 during the latter part of December, 1921, and with 802 during the first part of January a year ago. The average number of placements in regular employment effected daily by the offices was 514. During the previous period placements averaged 402 and during the corresponding period of last year 638. Casual placements also showed an increase, a daily average of 396 being reported as compared with an average of 290 during

the previous period and 212 during the same period of 1921.

During the latter part of the period under review applications declined considerably, registering an average of 1,595 daily as compared with an average of 1,814 during the same period of 1921. The average number of vacancies reported to the offices daily was 856 as compared with 800 during the same period a year ago. An average of 441 placements was reported during this period as compared with an average of 640 a year ago. Casual placements during the period averaged 340 daily as compared with 213 during the corresponding period of 1921.

Employment in the building trades as indicated by the value of the building permits issued in 56 cities showed considerably less activity during January than in the preceding month, the value falling from \$5,182,780 in December to \$2,933,035 for the month under review, a decline of over 43 per cent. In comparison with January, 1921, an increase of \$550,379, or slightly over 23 per cent, was reported. All provinces with the exception of British Columbia, registered decreases as compared with the preceding month, the most pronounced loss being shown in Ontario, where the value of the permits issued declined by \$1,416,699 or nearly 47 per cent. As compared with the returns for January of last year, expansion was recorded in New Brunswick, Ontario, Alberta and British Columbia. In this comparison the most marked contraction occurred in Manitoba, where the decrease amounted to \$88,550, or almost 49 per cent. Of the larger cities, Montreal and Winnipeg reported declines both as compared with the preceding month and with January, 1921. Vancouver, on the other hand, recorded expansion in both comparisons, while the value of the permits issued in Toronto was less than that registered in December, but greater than in January of last year. Of the smaller centres,

Moncton, Woodstock, St. Boniface, Point Grey, Prince Rupert and South Vancouver reported more contemplated building than in the previous month and also in the corresponding month of last year.

According to the *Canadian Building Review* issued by MacLean's Building Reports, Limited, the value of the contracts awarded during January totalled \$8,392,600 as compared with \$19,118,500 in December and with \$8,947,500 in January of last year. An analysis of the January returns by districts shows that \$402,000, or nearly 5 per cent, of the contracts were awarded in the Maritime Provinces; \$7,249,800, or 86 per cent, in Quebec and Ontario; and \$740,800, or almost 9 per cent, in the four Western provinces. Of the total for January, \$2,363,700 was to be spent on residences, \$1,783,600 on business establishments, \$288,500 on industrial building, and \$3,956,800 on engineering contracts.

Strikes

The loss of time on account of industrial disputes during February was less than during the preceding month of January, but greater than during February, 1921. There were in existence at some time or other during the month 25 strikes, involving 2,431 workpeople with an estimated time loss of 63,590 working days, as compared with 23 strikes, 3,357 workpeople and 76,070 working days in January; and 22 strikes, involving 2,624 workpeople and 23,547 working days in February, 1921. On February 1, there were on record 17 strikes, affecting 1,581 workpeople. Eight strikes were reported as having

commenced during February compared with six during January. Two of the disputes commencing during February and two commencing prior to February terminated during the month, leaving 21 strikes, involving 2,047 workpeople on record at the end of the month.

Prices

In prices there was an upward movement in grain and livestock and in fruits and vegetables, but there were decreases in all the other groups, except paints, oils and glass, in which linseed oil and turpentine were up. Dairy products and metals and implements showed the greatest decreases. The index number of wholesale prices was slightly higher, reaching 229.5 for February as compared with 227.7 for January; 270.1 for February, 1921; 343.5 for February, 1920; 263.5 for February, 1918; 175.9 for February, 1916; and 136.6 for February, 1914. In retail prices the average cost of a list of 29 staple foods in some 60 cities in Canada at the beginning of February was \$10.60 as compared with \$11.03 in January; \$14.08 in February, 1921; \$15.77 in February, 1920; \$12.54 in February, 1918; \$8.40 in February, 1916; and \$7.75 in February, 1914. The total for food, fuel and rent in the sixty cities was \$21.06 in February as compared with \$21.52 in January; \$24.85 in February, 1921; \$24.71 in February, 1920; \$19.80 in February, 1918; \$14.27 in February, 1916; and \$14.54 in February, 1914. The chief changes for the last month were in eggs and butter, with slight decreases in nearly all the other items except meats which showed slight advances.

II.—Industries and Trades during February, 1922.

Logging

THE commencement of seasonal inactivity caused employment in logging camps to show a slight decline during February, particularly in Ontario. In the Province of Quebec the situation showed practically no change, minor increases and decreases off-set-

ting one another. Firms at Hull, St. Jovite Station, Three Rivers, Louiseville and River Desert showed the same working forces as during January. At La Tuque, however, slightly less activity was reported. In Ontario considerable reductions in payroll were recorded at upper Ottawa points. On the

contrary, minor increases in payroll occurred at Blind River and Fort Frances. At Braeside, Haileybury and Nestorville employment remained on the January level. British Columbia firms, on the whole showed a decrease in the volume of employment they afforded, although at Alert Bay and Headquarters larger working forces were indicated. Information respecting the month of January, which was not available for insertion in the February issue of the LABOUR GAZETTE, shows that timber of all species scaled in British Columbia in that month totalled 92,908,707 feet, as compared with 139,257,977 feet in December. The quantity of Douglas fir and red cedar scaled formed over 70 per cent of the total.

Mining

Employment in mining, particularly in the coal fields of Alberta, again declined heavily. At Inverness, Stellarton and Sydney Mines in Nova Scotia, however, slightly increased activity was indicated in the production of coal. On the other hand, at Joggins Mines and Glace Bay, reductions in staff were recorded. At Minto, N.B., minor losses in employment occurred in coal mines. In Alberta curtailment of operations was general, there being contractions at Blairmore, Canmore, Coalhurst, Coleman, Commerce, Drumheller, Nordegg, Edmonton, Hillcrest and Brule Mines. Increased activity in the Fernie coal fields caused employment in this industry to show slight gains in British Columbia. At Cumberland and Middlesboro, however, reductions in staffs were reported. Metal mining afforded practically the same volume of employment as during January. Gold mining at Timmins eased off to some extent, but at Schumacher and South Porcupine there were minor increases in activity. Silver mining at Cobalt also afforded rather more employment. The nickel mines at Nickelton, Copper Cliff and Coniston reported no change in the situation as compared with January. In British Columbia decreased activity

was recorded in gold, silver, copper and zinc mining at Anyox and Kimberley. On the other hand, at Trail and Britannia Beach operations showed some extension, while at Rossland staffs remained stationary. Employment in asbestos mines in Quebec showed an increase, owing to the resumption of work in a mine at Black Lake partly closed for repairs during January. In addition, at Asbestos, Coleraine and Thetford Mines improvement on the whole was reported. Practically the same level of employment was maintained in the salt mines at Amherstburg, Ont., as in the preceding month. Stone quarrying at St. John, N.B., declined to some extent.

Manufacturing Industries

Employment in the food group continued to show improvement during February, the edible plant group in particular reporting increased activity. Employment in chocolate manufacturing at Halifax, N.S., eased off slightly, and sugar refining at Dartmouth in the same province also showed a minor decline. On the other hand, sugar refineries at St. John, N.B., were rather more active, and there was a further, though small, increase in employment in chocolate and confectionery factories at St. Stephens. In the province of Quebec some expansion in food production was reported. Biscuit manufacturing in Montreal and Joliette afforded more employment than during the preceding month. Flour mills in the former centre reported practically the same staffs as in January, while sugar refineries and confectionery plants were decidedly busier. In Ontario also improvement was manifested in the edible plant division. Biscuit and confectionery production at Brantford, London and Toronto was in considerably greater volume than during the preceding month. Sugar refineries at Kitchener, Chatham and Wallaceburg were very much more act-

ive, although they were not working at full capacity. Flour and cereal mills at Port Colborne indicated substantial reductions in staffs, while at Keewatin and Peterboro little change in the situation was reported. Employment in canneries at Leamington remained on the January level. Chocolate factories in Toronto, on the whole, were busier, although the change was slight and in some instances decreased activity was registered. Starch and glucose manufacturing at Fort William employed a rather larger working force, but at Cardinal reductions in staff were indicated. In Manitoba further, though small, contractions in employment were reported in the food group. Confectionery making at Winnipeg employed practically the same staffs as in January. Flour and other cereal mills in the same centre, however, were not so busy. At Moose Jaw, Sask., there was a slight decline in activity in cereal mills. Sugar refineries at Vancouver recorded a minor shrinkage in employment. Meat packing plants and abattoirs at Hull and Montreal in the province of Quebec registered smaller staffs than in January. In Ontario, also, some curtailment in operations was reported in the meat industry, particularly at Toronto. Dairies at Ottawa and Toronto were somewhat busier. In Winnipeg, Man., both meat packing plants and dairies reported practically the same staffs as in the preceding month. At Calgary, Alta., the meat industry afforded less employment than in January, but at Edmonton there was an increase in activity. The resumption of work in several tobacco factories, temporarily closed down during January for repairs and inventories, caused employment in that industry to show considerable recovery. In Montreal, factories producing cigars and other tobacco products were decidedly busier and in Quebec city also increases in staffs were noted. At Granby, on the other hand, tobacco production eased off slightly. Breweries in Montreal were hardly as busy as in

January. In Ontario, tobacco concerns employed slightly larger working forces at Hamilton, but at Toronto reduced activity on a small scale was reported.

The iron and steel industries showed considerable improvement during the month under review, the re-opening of the railway car shops closed at the end of January having caused large increases in employment early in February. The rolling mills at New Glasgow and Sydney were decidedly busier, and car factories in the former centre reported a considerable increase in staffs. Slight improvement was reported also in the employment afforded in the shipyards at Halifax. Practically no change occurred in the boiler and engine works at Montmagny, Que. There was a slight decrease in activity in steel foundries at Longue Point. Fire arm manufacturing at Brownsburg afforded more employment than for several months, but at Quebec city that industry declined very slightly. Steel shipbuilding and repairing at Montreal absorbed more employees than in January, while at Sorel and Three Rivers a minor drop in employment occurred. The re-opening of the railway car shops in Montreal provided work for many employees laid off at the end of January. Foundries and machine shops in the same city were slightly busier, and rolling and forging mills employed larger working forces than during January. Trade machinery factories and stamped and enamel ware shops, also in Montreal, reported some expansion. The production of agricultural implements at Terrebonne and of hand tools at Rock Island showed very small change when compared with January. In Ontario the iron and steel industry showed improvement on account of the resumption of work in the locomotive shops and of renewed activity in automobile factories. The improvement in the latter was centered largely at Oshawa, Walkerville, Windsor and Ford, but there were also increases

IRON AND STEEL PRODUCTS

in payroll at Chatham and St. Catharines. Agricultural implement manufacturing at Brantford, Hamilton, Smith's Falls and Toronto employed larger working forces than during January. Engine and boiler factories at Brantford and Galt were not so busy, but increased activity was indicated at Toronto. Foundries and machine shops at Brantford and Toronto absorbed larger staffs than during January, though at Oshawa there was a slight falling off in employment. Practically no change in the situation was reported by manufacturers of small hardware at Brockville and Hamilton, while at Ingersoll the shops were somewhat busier. Heating appliance factories afforded considerably more employment at London, the plants which had been working at about half capacity reinstating practically all their former employees. At Guelph heating appliance shops were busier also, but at Toronto a minor drop in personnel was indicated. Manufacturers of hand tools at Dundas reported practically the same staffs as in the preceding month, while at St. Catharines the situation was more favourable. Wrought iron pipe shops at Welland and cast iron pipe factories at Guelph were busier. The production of general plant machinery at Hamilton afforded more employment than during both December and January; at Toronto staffs remained stationary, while at Galt there was a decline in activity. Considerable contraction in employment was reported by structural iron and steel shops at Walkerville, but at Hamilton this industry showed improvement. Wire manufacturers at Hamilton reported curtailment of operations, affecting about 30 per cent of their staffs. Railroad equipment concerns in the same city were busier. Steel furnaces at Hamilton, on the other hand, reported smaller working forces than during the preceding month. Considerably more activity was indicated by manufacturers of railway cars and parts at Hamilton and Fort William; at Ottawa, however, there was a nominal decline in staffs. Steel shipbuilding and repairing at

Midland and Port Arthur showed some expansion, and an insignificant increase in employment occurred in the same industry at Kingston. Forging mills at Oshawa and Swansea were slightly busier during February than in January. Trade machinery shops at Peterboro reported a somewhat larger working force than in the previous month. Further improvement in employment was indicated by sheet metal manufacturers at Oshawa. Rolling mills at Sault Ste. Marie and Toronto reported a more favourable situation than during the preceding month, but they were not as yet working to full capacity. Stamped and enamel ware manufacturing at Toronto employed more workers than for several months. On the other hand, there was a slight falling off in the production of safes and vaults in the same city. Motor cycle and bicycle shops at Weston reported increased activity. The iron and steel industry generally in the Prairie provinces also showed expansion, due partly to the re-opening of the railway car shops. Operations at the rolling mills at Selkirk were suspended and structural iron and steel shops in Winnipeg were rather less active. In British Columbia further improvement was recorded in the iron and steel division. The shipyards at Vancouver and Victoria reported considerably larger staffs than for several months, although they were still working far below capacity.

Very little change occurred in the volume of employment afforded in the non-ferrous metal group during February, increases in some cases offsetting contractions in others.

Brass, bronze and copper factories in Montreal on the whole were busier, although minor fluctuations were indicated. Jewellery manufacturing at Montreal employed practically the same number of workers as during January, while at Sherbrooke there were reductions in payroll. Aluminum factories at Shawinigan Falls maintained the same staffs. Further curtailment

of operations was reported in nickel refining at Deschenes, Que. Brass, bronze and copper factories at Hamilton and Sarnia were not as busy as in January. A minor drop in employment was reported in nickel refining at Copper Cliff, but at Port Colborne this industry was slightly more active. Aluminum manufacturing at Toronto showed improvement. In British Columbia employment in copper smelting and refining eased off, particularly at Anyox.

The leather industries during the month under review were rather dull, although considerable

LEATHER AND RUBBER PRODUCTS recovery from losses in employment reported at the end of December and during January occurred in some centres. Boot and shoe

manufacturers in Montreal were, on the whole, decidedly busier, and at Quebec and St. Hyacinthe improvement in the situation was reported also. Tanneries at Toronto employed slightly larger working forces. At London and Kitchener, however, smaller payrolls were indicated, while at Newmarket and Oshawa practically no changes occurred in tanneries. Boot and shoe manufacturers at London, Galt, Perth and Toronto reported minor declines in activity. At Brampton, however, slight additions to staffs were indicated. The rubber trades, on the whole, were busier during February, owing partly to re-opening of several large establishments, following temporary shutdowns. Footwear factories at Granby showed decided improvement, but at Montreal and St. Jerome there were insignificant declines in employment. Tire manufacturing at Montreal also eased off slightly, but the production of rubber and elastic goods in the same city showed a minor increase. In Ontario, footwear factories at Guelph and Kitchener employed larger working forces than during January, but at Merriton less activity was indicated. Tire manufacturing at Toronto and Kitchener show-

ed decided gains in employment, while at Guelph there was a reduction in staffs. Rubber and elastic factories at Toronto and Bowmanville were busier than during the preceding month.

Continued expansion was reported in the volume of employment afforded in this group during February, the commencement of seasonal activity in sawmills affect-

ing the situation favourably. The sawmills at Plaster Rock, N.B., reported practically the same payrolls as in January. In the province of Quebec rather small increases in employment were reported in the sawmills at St. Pâcôme, Sayabec, Quebec City and Montreal. At Breakeyville and Port Etchemin lumber mill staffs remained stationary. Furniture factories at Beauharnois and Cowanville were slightly busier, but at Coaticook there was a minor decline in production. Wooden shipbuilding at Sorel was more active, the plants which were closed during January having re-opened in February. At Levis no change in employment occurred in the shipyards. The production of matches at Hull absorbed a considerably larger number of workers. Slight improvement in the situation was recorded by Ontario firms in the lumber industry. The sawmills at Arnprior, Fort Frances, Pembroke, Rockland and Keewatin, however, reported practically the same staffs as in January. Employment in box and other container factories at Byng Inlet, Pembroke and Toronto showed an increase in volume, though the gains were not particularly large. Furniture manufacturers at Brantford, Newmarket and Stratford were busier. Manufacturers for sporting goods at Toronto, on the other hand, employed a slightly smaller number of persons than in January. Carriage and wagon factories at Chatham and Orillia recorded increased activity, particularly in the latter centre. Practically no change in staff was reported by manu-

facturers of washing machines and wringers at London. The sawmills at The Pas, Man., were hardly as busy as in January. Considerable improvement in employment was indicated by sawmills in British Columbia, especially at Fraser Mills and Vancouver. Additions to staffs on a smaller scale were registered also at Wardner. At Golden and Chemainus, on the other hand, reduced activity was indicated, while the closing of a large mill at New Westminster affected employment in that centre adversely. Manufacturers of musical instruments, on the whole, reported static conditions. Staffs in gramophone factories in Montreal and piano and organ factories in Toronto remained on the January level.

Employment in this group showed a favourable movement during the month under review, increases in some mills more than counterbalancing losses in others. The tendency in the Maritime provinces, however, was slightly downward, there being contractions in staff in the pulp and paper mills at Liverpool, N.S., and at Chatham and Bathurst, N.B. At St. John, however, there was a slight increase in activity. Paper mills at Hull, Three Rivers, Donnacona, Chicoutimi and Kenogami afforded less employment than in January. On the other hand, at Shawinigan Falls, Cap Magdeleine, East Angus and La Tuque larger working forces were engaged in the paper mills. Employment in this group in Ontario experienced an upward movement also. The paper mills at Cornwall, Ottawa, Sturgeon Falls, Thorold and Hawkesbury, however, were decidedly less fully employed than in the preceding month. On the other hand, increased activity was evidenced at Sault Ste. Marie, Iroquois Falls and Smooth Rock Falls. The printing trades in Toronto also were busier. At Winnipeg, Man., however, printing shops remained rather quiet. At Regina and Saskatoon, Sask., and

Edmonton and Calgary, Alta., very little change in employment was reported by printers and publishers. In British Columbia, pulp and paper mills at Ocean Falls and Powell River employed larger working forces than during December and January; at Port Alice staffs remained stationary. Printing shops in Vancouver and Victoria were very slightly busier.

Continued recovery was evident in the textile industries during February.

TEXTILE PRODUCTS

Employment in the cotton mills at Marysville, Milltown and St. John, N.B., showed a very slightly downward tendency. The cotton mills at Yarmouth, N.S., however, reported a minor increase in activity, while the hosiery and knitted goods factories at Truro registered the same staffs as during the preceding month. In Quebec the situation was considerably more favourable than in January, improvement being reported in practically all branches of the industry. The production of women's clothing in Montreal was in considerably greater volume than during the preceding month, and men's garment factories were busier also. At Sherbrooke, Montmorency Falls and Valleyfield cotton mills afforded slightly more employment, while at Three Rivers and Magog they were somewhat slacker. Staffs in thread factories in Montreal on the whole remained stationary, but at St. John's there was a considerable increase in activity. The production of men's furnishings at Montreal and St. John's absorbed a slightly larger number of workers than during January. Oil and waterproof clothing manufacturers in the former city showed a minor gain in employment. Corset factories in Quebec city also were busier. The production of hosiery and knitted goods at St. Hyacinthe employed rather more workers than in the preceding month. Woollen and silk mills in Sherbrooke reported practically the same staffs as in January. Felt factories at Lachute Mills showed greater activity. Textile manufacturers in Ontario again

indicated a considerable increase in the employment they afforded. Women's garment factories in Toronto were decidedly busier, while men's clothing mills reported practically the same staffs as in January. Men's furnishings plants in Toronto also afforded more employment, and improvement was registered by such establishments at Kitchener and Walkerville. The production of men's clothing at Hamilton showed an increase, while the January level of employment was maintained at London. Hosiery and knitting mills in Toronto were on the whole rather slack-er than during the preceding month, although some firms reported additions to staffs. At Hamilton there were general increases in employment in knitting mills, and Brantford, Galt, Woodstock and Dunnville concerns also were busier. Woollen goods manufacturers at Toronto, Preston and Peterborough maintained practically the same staffs as in January. At Almonte production in the woollen mills eased off, while at Hespeler it showed a considerable increase. Cotton yarn and cloth mills at Hamilton, on the whole, were busier, and at Welland and Cornwall there were minor increases in personnel. Cordage manufacturing at Brantford and Welland showed practically no change when compared with January. The production of bedding in Toronto showed further expansion.

Employment for oil refiners in Montreal remained steady. At Sarnia, Ont., increased activity was indicated in petroleum product factories. There was also a slight increase in activity in that industry at Ioco, B.C., while at Dartmouth, N.S., production was somewhat curtailed. Practically no change in employment was reported by manufacturers of oxygen and acetylene gases at Welland, and of cynamid at Niagara Falls in Ontario. Baking powder factories at Toronto were considerably busier. Gas manufacturing in the same city afforded sub-

stantially the same volume of employment as in January.

There was a nominal increase in staffs in explosive plants in Montreal, and paint works in the same city were somewhat busier. The production of soap at Toronto declined to some extent. Factories making drugs and medicinal preparations at Walkerville reported a minor increase in activity.

On the whole this group showed some expansion in February, although fairly heavy declines occurred in some of its branches. At Montreal employment in incandescent lamp factories showed a reduction, and glass factories in the same city were slacker. Cement mills at Montreal reported practically the same staffs as in January. The production of glass ware at Hamilton, Ont., remained on the January level, but at Wallaceburg reductions in employment were recorded by glass manufacturers. There were also minor declines in staffs in glass factories in Toronto. Concerns producing cement at Port Colborne and Belleville were decidedly more active.

Electrical appliance factories in Montreal were considerably busier than during the preceding month. In Ontario this group also afforded more employment, particularly at Hamilton, Stratford, St. Catharines and Toronto. In the last named centre, however, some apparatus concerns reported slightly less activity than in the preceding month.

Very little change in employment was registered by electric current concerns during the month under review. In Montreal and Quebec city staffs remained steady. Minor declines in employment occurred at Hamilton and Toronto. In Manitoba

electric current plants were slightly busier on the whole, although some firms in Winnipeg reported insignificant declines in staff. At Vancouver, B.C., there was a decided increase in activity in this industry.

The production of brooms and brushes at St. John, N.B., afforded more employment than during

MISCELLANEOUS PRODUCTS

In the preceding month. In Ontario, slight increases in activity were also indicated by broom and brush manufacturers, mainly at Port Elgin and Toronto, while at Hamilton staffs remained steady. The production of window shades at Lachine, Que., was in slightly greater volume than in January. Manufacturers of roofing materials at Montreal reported smaller payrolls, as did also makers of surgical supplies. Photographic apparatus factories in Toronto were considerably busier. Plumbers' supplies manufacturers at London reported the same volume of employment as in January.

Construction

The Canadian Pacific, Grand Trunk, and Canadian National Railways reported a comparatively small increase in the employment afforded on railroad construction, including maintenance of way. At the end of February they had over 800 more men on their staffs than at the end of the previous month, the increase being reported towards the latter part of the month. The Canadian Pacific Railway added about 200 persons to their staff; the Grand Trunk Railway increased their working force by slightly over 400 men, and the Canadian National Railways added approximately 180 workers. The largest increases occurred in Ontario and Quebec, although Saskatchewan, Manitoba and the Maritime Provinces also shared to some extent in the expansion.

The value of building permits issued in 56 cities during January amounted to \$2,933,035, compared with \$5,182,780

in December and \$2,382,656 in January, 1921. All provinces with the exception of British Columbia reported reductions in activity in the former comparison. During February, smaller working forces than in January were reported by contractors, though fluctuations occurred in several cities. Declines in employment were registered at Halifax, N.S. In the province of Quebec, Montreal and Sherbrooke firms reported reduced activity. In Ontario, contractors in Toronto and London employed about the same working forces as in January, while contractors in Hamilton, Kingston, New Liskeard and Windsor were not so busy. Fort William, on the other hand, reported more activity. At Winnipeg, declines in employment in the building and construction group were shown. Firms in British Columbia also showed increased slackness. Highway construction in Ontario continued to release large numbers of men.

Transportation

The gross earnings on the Canadian National Railways during February were \$7,471,399 as compared with \$6,695,480 in January. Information relative to the month of January, which was not available for insertion in the February issue of the LABOUR GAZETTE, shows that the gross earnings of the Canadian Pacific Railway during January were \$11,337,975 as compared with \$15,756,924 in December, and with \$14,465,430 in January, 1921. Contractions were again recorded in the volume of employment afforded by the Canadian Pacific, Grand Trunk and Canadian National Railways in operation (including general offices, trainmen, engine crews, station employees, sleeping, parlour and dining car employees), a reduction of slightly over 1,000 persons being registered. The Canadian Pacific Railway released approximately 200 persons; the Grand Trunk employed about 150 fewer workers and the Canadian National let out more than 700 employees. The greater part of this decline was reported in the

Prairie provinces, the situation in the other parts of the country remaining practically stationary. Increased activity was reported on street and electric railways at Montreal, but at Quebec city the situation remained unchanged. Reductions in staffs occurred at Hamilton, Toronto and Ottawa. Winnipeg and Calgary also manifested a slight contraction, while at Edmonton no change was indicated. Considerable expansion was reported at Vancouver,

but Victoria registered the same volume of employment as was shown in the previous month.

Trade

Retail trade was considerably slacker than in the preceding month, decreases in staff being reported by stores in Montreal, Ottawa, Toronto, Winnipeg and other centres. Wholesale trade also continued to be less active, particularly at Montreal and Winnipeg.

INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907

Proceedings for the Month of February, 1922, with Texts of Boards' Reports

During the month of February the Department received reports from two Boards of Conciliation and Investigation established to deal with disputes between (1) employers, members of the Association of Canadian Building and Construction Industries, Ottawa Branch, and their employees, members of the Ottawa District Council of Carpenters and Joiners, and (2) employers, members of the Association of Canadian Building and Construction Industries, Ottawa Branch, and their employees, members of the Bricklayers International Union No. 7.

Five applications were received for the establishment of Boards.

Applications Received

During the month of February applications for the establishment of Boards of Conciliation and Investigation were received as follows:—

(1) From the employees of the Dominion Power and Transmission Company, Hamilton, being linemen, groundmen, etc., members of the Canadian Electrical Trades Union, Hamilton Branch. A Board was established composed as follows: Mr. J. M. Godfrey, K.C., Toronto, chairman, appointed by the Minister in the absence of a joint recommendation from the other two members, Messrs. F. H. McGuigan and J. C. O'Donoghue, Toronto. Mr.

O'Donoghue was appointed on the nomination of the employees concerned, but in the absence of a recommendation from the employers Mr. McGuigan was appointed by the Minister.

(2) From the employees of the Dominion Power and Transmission Company and the Hamilton Street Railway Company respectively, members of Local 700, International Union of Steam and Operating Engineers, and Divisions 107 and 876, Amalgamated Association of Street and Electric Railway Employees of America. It was at first thought that the question affecting these classes of workers might be dealt with by the Board already established to deal with those of the electrical workers. This could not be satisfactorily arranged, however, and a separate Board was established composed as follows: Mr. J. M. Godfrey, K.C., Toronto, chairman, appointed by the Minister in the absence of a joint recommendation from the other two members, Messrs. F. H. McGuigan, and Fred Baneroff, Toronto. Mr. Baneroff was nominated by the employees concerned, but in the absence of a recommendation from the company Mr. McGuigan was appointed by the Minister.

(3) From the employees of members of the Association of Canadian Building and Construction Industries, Ottawa Branch, the employees being members of the Ottawa District Council of

Carpenters and Joiners. The personnel of the Board established in this case and the text of the Board's report appear in present article.

(4) From the employees of the Algonoma Eastern Railway, Sudbury, Ontario, members of Division No. 4, Railway Employees', Department, American Federation of Labour. A Board was established, Mr. Fred Bancroft, Toronto, being appointed a member on the recommendation of the employees concerned. At the close of the month the Board had not been

completed, as an officer of the Department of Labour visiting the locality was endeavouring to bring about an adjustment of the dispute through renewed negotiations between the parties concerned.

(5) From the employees of members of the Association of Canadian Building and Construction Industries, Ottawa Branch, the employees being members of the Bricklayers' International Union No. 7. The personnel of the Board established in this case and the text of the Board's report appear in the present article.

Report of Board in Dispute between Employers, members of the Association of Canadian Building and Construction Industries, Ottawa Branch, and certain of their employees, being carpenters and joiners.

A report was received from the Board established to deal with the dispute between employers, members of the Association of Canadian Building and Construction Industries, Ottawa Branch, and certain of their employees being members of the Ottawa District of Carpenters and Joiners. The Board was composed as follows: Mr. Charles Ogilvy, Ottawa, chairman, appointed on the joint recommendation of the other two members, Messrs. J. S. C. Adamson and J. V. McCaffrey, Ottawa, nominees of the employers and employees respectively. The report of the Board was unanimous and recommended a rate of seventy cents per hour, effective until May 1, 1923, for the class of labour concerned, and that the Department of Labour should lend its good offices looking towards bringing about a settlement of this question, as well as other matters which required further discussion before a satisfactory agreement could be reached.

Report of Board

In the matter of the Industrial Disputes Act, 1907, and of a dispute between the Association of Canadian Building and Construction Industries, Ottawa Branch, employers, and the Ottawa District Council of Carpenters and Joiners, employees.

Ottawa, February 17, 1922.

First Session—9.45 A. M., Feb. 15th.

Present—The Chairman, Mr. Adamson and Mr. McCaffrey.

Mr. Adamson reviewed the situation from the employer's point of view, endeavoring to show that price of carpenter labour, on which the general scale of wages is based, must come down in order to induce any widespread revival of the building industry, which he stated at present to be quiet in the extreme. Mr. Adamson took a wide view of the problem showing that he has made a special study of it.

Mr. McCaffrey spoke on behalf of the employees, the main points he made being that, as prices of labour rose from the year 1917 as the price of living steadily rose (although not in proportion to living costs), it was but reasonable to ask that prices of labour should not fall more rapidly than prices of living, which he contended did not warrant at present the reduction in price of labour which was being offered.

Second Session—2.00 P. M., Feb. 15th.

Present—All Board members.

Mr. Loomis was called, on behalf of the contractors, to speak on the subject from the investor's standpoint. Mr.

Loomis endeavored to show and, in his judgment, was convinced that money was being held back owing to building costs being too high. He holds the opinion that lower labour costs will so stimulate building that the employee or worker will, in the long run, earn more money than if the present rates remain in force.

Mr. Martel on the other hand, who spoke from the worker's point of view, was convinced that if prices of labour remained the same as last year, and he knew of no sufficient lowering in the cost of living to warrant the lower offer in wage, and the general public were informed that the prevailing rates were to remain in force, plenty of building would go on. Mr. C. R. Nichols, President of the District Council of Carpenters, who attended the meetings throughout, fully concurred in Mr. Martel's view.

Third Session—9.45 A. M., Feb. 16th.

Mr. Noffke, an Ottawa architect, spoke on behalf of the contractors, stating that work was being held back owing to high labour costs. At the same time, he did not think that a small reduction in labour cost would stimulate building to any great extent; he thought a big drop was required to make any great improvement in building operations.

Mr. Tom Moore spoke on behalf of the workers and reviewed the situation for some years back, producing many interesting figures bearing on the subject, all of which were carefully weighed by the Board.

Mr. G. A. Crain also spoke at this session as a contractor from the contractor's point of view. In Mr. Crain's decided opinion, the cut in wage offered was imperative; he considered that, as construction material had dropped to a very considerable extent, and the cost of living, as per statistics from the Labour Department, had in the last year dropped 20 per cent, it was but reasonable that, locally, the wage scale should

come down. Mr. Crain took a very fair view of the matter and clearly showed that the contractors regretted to have to make this offer, but said they did not see their way to do otherwise.

Fourth Session—2.00 P. M., Feb. 16th.

Present—All Board members.

Mr. Greene, of the General Supply Company, spoke on behalf of the contractors and brought figures to prove that in 47 items used in construction of buildings there had been an average drop since 1921 of 27 1-3 per cent, which has since in many cases dropped still further, and at present probably 30 to 33 1-3 per cent might be nearer the mark. It was Mr. Greene's decided opinion also that, as living costs had to such an extent come down, some reasonable cut in the scale of wages was quite in order.

Mr. Hugh Graham, of A. Garvoek & Company, Contractors, Ottawa, spoke on several occasions and very greatly helped the proceedings by his disposition to be fair and considerate in every way.

To sum up—

The Board and the various witnesses called reviewed the whole matter from every angle and in all its bearings in their endeavour to come to a just conclusion. A most fair spirit was shown throughout by one and all, the contractors making it quite clear that there was no disposition whatever on their part to do anything but try to solve a very testing and trying condition existing in their line at the present time, the workers also proving beyond question that their desire was not to take any advantage of their employers, but rather get the best possible settlement under existing conditions.

Fifth Session—9.45 A. M., Feb. 17th.

Present—All Board members.

At this meeting the Board, after again carefully deliberating over certain

points, unanimously agreed to a compromise, making the scale of wage seventy cents per hour until May 1st., 1923.

The Board further recommended unanimously that the Minister of Labour use his good office to get both parties to this dispute together, to try to settle some other matters which are still

open and require discussion, with a view to final and satisfactory agreement.

(Signed) CHARLES OGILVY,
Chairman.

J. S. C. ADAMSON,

(On behalf of Employers.)

J. V. McCAFFREY,

(On behalf of Employees.)

Report of Board in dispute between Employers, members of the Association of Building and Construction Industries, Ottawa Branch, and certain of their employees, being bricklayers.

A report was received from the Board established to deal with the dispute between employers, members of the Association of Canadian Building and Construction Industries, Ottawa Branch, and their employees, members of the Bricklayers' International Union No. 7. The Board was composed as follows: Mr. John McJanet, Ottawa, chairman, appointed on the joint recommendation of the other two members, Messrs. Hugh Graham and Charles G. Hanger, Ottawa, nominees of the employers and employees respectively. The report of the Board was unanimous and made certain recommendations concerning a means of settlement of the dispute.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Association of Canadian Building and Construction Industries, Ottawa branch, employers, and the Bricklayers' International Union No. 7, employees.

To the Hon. James Murdock,
Minister of Labour,

Sir:—

The Board of Conciliation and Investigation appointed by you to deal with the wage-rate dispute between the Canadian Building and Construction Association and the Bricklayers' International Union No. 7 beg to submit to you their Report.

The bricklayers demanded \$1.00 per hour, and the contractors offered 80 cents per hour, the present wage rate being 90 cents an hour.

The Board have unanimously agreed to a rate of 85 cents an hour from May 1st, 1922 to May 1st, 1923.

Many things have contributed to make this most desirous and unanimous settlement possible in such a comparatively short time. Among these we may mention one of two.

Last year's unfortunate tie-up and delay in building operations led some of the leading contractors and bricklayers to come together and consider the whole situation. They determined that an effort should be made to have all wage disputes settled before May 1st, so that building could begin as soon as the season opened, and continue without interruption. Your own ideas along the same line and your hearty and sympathetic co-operation have greatly assisted. The interests of the public, as well as their own, were in their minds and they realized that a mutually considerate and fair spirit begets public confidence, and induces work.

One other rather unique thing may be mentioned. A few weeks ago, Mr. G. B. Greene called a conference between delegates from all the Unions in the city and a general meeting of all the contractors. At this conference a free, earnest and thorough discussion took place and the sensible and satisfying conclusion was reached that co-operation and not antagonism was in the best interests of all concerned.

As to the work of the Board in this matter, it may be stated that the gentlemen who spoke for the contractors, as well as those who spoke for the bricklayers, presented their case most ably,

earnestly and considerably. No personalities were indulged in, and such a feeling of fairness was shown that the public may rest assured that things are moving in the right direction, and should the contractors and the remaining trades be able to reach a similar amicable settlement, this city should experience a very fine building season this year.

For the contractors Mr. Hugh J. Graham pointed out that they stood between the public and the bricklayers, that it did not benefit them to reduce wages as they worked on a percentage of cost, and that good feeling existing between employer and employee was most desirable. He also showed that, as there was a reduction in the cost of material and the cost of living, there should also be a proper reduction in wages to stabilize the building industry and satisfy the public.

Mr. A. C. Ross, in a very able address, pointed out among many other things that the contractor really does not pay the men, that he is only a medium between the worker and the public, and that united effort should be made to put things on such a basis as will induce the investing public to build.

Mr. J. S. C. Adamson stated that cost of living was not the only basis of consideration, that there are other things that count, that a man builds a house for shelter and part of his capital, that it is desirable to stimulate building activity, that continuity is required and that it is necessary to show investors that profit may be made in building.

Mr. G. A. Crain dealt considerably with the question of efficiency, emphasized the fact that the public are the true arbitrators, and that they must be satisfied before they will go ahead. He also held that as there was a reduction in the cost of living and also of material there should be a proper reduction in wages.

For the bricklayers Mr. C. G. Hanger displayed a fine spirit, and ably and most earnestly spoke in behalf of the employee, pointing out that the labourer had only his labour to sell, that rents

were high and that it was a struggle for the workingman to maintain a decent standard of living for himself and his family.

Mr. E. Schroeter ably defended the bricklayers from a great deal of the inefficiency charged against them, showing that plain walls were not common in most buildings now and hence the number of bricks laid per day was smaller.

Mr. Alexander McNabb spoke of the difficult position of many bricklayers, pleaded for a respectable standard of living for the workman and his family, and drew a comparison between the bricklayer and some other tradesmen.

Mr. R. Hooper in an able, practical and earnest address, laid emphasis on steady honest labour, and reasonably inexpensive living, and the desirability of a workman, having a home of his own. He also spoke of the satisfactory settlement of the wage rate for stonecutters.

Mr. G. B. Greene kindly gave the Board his impressions of the conference already referred to in this report. He clearly showed the value of conference in removing friction and misunderstanding and establishing a feeling of good will and co-operation.

Mr. Loomis showed that, in his opinion, money would likely be invested in building if the cost were lower and that a stimulation of the building industry would be of great benefit to all.

In conclusion it may truly be said that it is an excellent thing for contractors and employees to meet in conference to settle their disputes.

We feel that this Board has not met in vain, that we have accomplished something of value, and that if other trades can follow the example of the carpenters, bricklayers and stonecutters, the public will feel assured and a great stimulus will be given to building activities, and employment and prosperity will be the happy lot of many workmen.

Our hearty thanks are due to the kindly consideration of the newspapers of the city.

(Signed) J. McJANET,
HUGH J. GRAHAM,
C. G. HANGER.

STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1922.

EIGHT strikes, involving 850 workpeople, were reported as having commenced during February. There were in existence at some time or other during the month 25 strikes, involving 2,431 workpeople and an estimated total time loss of 63,590 working days, as compared with 23 strikes, involving 3,357 employees and 76,070 working days in January, and 22 strikes, involving 2,624 workpeople and 23,547 working days in February 1921. The time loss occasioned by the eight strikes which began in February was 9,350 working days, while a loss of 54,240 working days is charged to the 17 strikes which commenced prior to February. Two of the strikes commencing in February and two commencing prior to February terminated during the month, leaving the following 21 strikes, affecting 2,047 workpeople on record on February 28; two strikes of miners in the Drumheller coal district; employees of the steel and coal companies, Syd-

ney, N.S.; gauge men, Sydney; sheet metal workers, Toronto; garment workers, Montreal; tailors, Charlottetown; garment workers, Hamilton; garment workers, Montreal; waiters, Toronto; compositors, Montreal; compositors, etc., Vancouver; photo engravers, Montreal; photo engravers, Ottawa, printers, Montreal; printers, Ottawa, printers, Toronto; printers, Winnipeg; printers, bookbinders and pressmen, Halifax; typesetters, pressmen and bookbinders, Hamilton; compositors, Quebec.

A dispute between stove mounters and metal polishers and an employer occurred at Sackville, N.B., on March 15, 1921, owing to the refusal of the employer to operate a "closed shop." It had been reported by the employer that no loss of time resulted, as a new staff had been taken on. It has, however, been recently reported by the union that this dispute is still in existence.

Disputes by Industries.

The following is a review of the disputes by industries in the order in which they appear in the statistical table. A brief summary is given of the more important strikes.

MINES, SMELTERS, QUARRIES, CLAY PRODUCTS, ETC.—In addition to a strike at the collieries of the Callie Coal Company Limited, another strike occurred

in the Drumheller district, when 230 mine workers struck on February 22 in protest against a reduction in the contract wage rates, which went into effect at Monarch Mine of the North American Collieries Limited. While the former strike, which commenced on December 22, remained unterminated at the end of the month, the firm claimed

to be operating at close to normal capacity.

As regards the second strike, the company reported that owing to conditions as its colliery it could not operate if the reduced selling price of lump coal was not attended by a reduction in the rates paid to contract miners. The employees's local claimed that by accepting a reduction in contract rates, the position of the miners would be "seriously prejudiced" when the new contract with the operators came up for discussion. This strike was also unterminated at the end of the month.

PRINTING AND PUBLISHING. — Eleven strikes involving 1,126 employees with an estimated time loss of 41,864 working days took place in this group during the month. Both parties were still divided over the issue of the 44-hour week. Strikes were still in effect in Halifax, Montreal, Ottawa, Toronto, Hamilton, Winnipeg and Vancouver. An additional strike occurred during the month when the printing trades at Quebec went on strike on February 15. The employees demanded a 44-hour week and increased wages. For a short time the proceedings of the Quebec Legislature were hampered by the strike, but the union representatives decided that the strikers might resume work on exclusively parliamentary printing. About 160 employees were involved and the strike remained unterminated.

CLOTHING.—This group sustained the second greatest time loss for the month, the approximate time loss being 8,485 working days, resulting from five strikes which involved 425 employees. One strike, which commenced in November

and involved 200 garment workers in Montreal, terminated on February 27. There were two strikes of 25 garment workers in Montreal which commenced during the month and were unterminated.

TEXTILES.—Textile workers at Paris, Ont., struck against a proposed reduction in wages. The strike commenced on February 6 and was terminated on February 18, the employees accepting a 10 per cent reduction.

LUMBERING.—One hundred and fifty loggers at Merritt, B.C., struck on February 6 in support of demands for an eight-hour day and a minimum wage. The strike was called off on February 16, the employees resuming work on the former schedule of a 10-hour day.

BUILDING AND CONSTRUCTION. — The sheet metal workers were the only trade that still remained on strike at the end of the month in connection with the building trades strike in Toronto, which commenced on January 2 and involved plasterers, plasterers' labourers and sheet metal workers. The plasterers settled on the basis of their former rate of \$1.00 per hour. The reduction proposed was 10 per cent.

MISCELLANEOUS. — A strike of 50 waiters in a Toronto hotel occurred on February 27 in protest against the employment of waitresses.

Four employees of a theatre at Windsor, Ont., went on strike following their refusal to accept a wage reduction. This dispute is referred to in detail elsewhere in this issue in connection with the issuing of an injunction against picketing.

STRIKES AND LOCKOUTS DURING FEBRUARY, 1922.

Industry or Occupation	Particulars	No. of employ-ees affected	Time loss in work-ing days
Strikes commencing prior to February, 1922.			
MINES, SMELTERS, QUARRIES, CLAY PRODUCTS, ETC.—			
Coal miners, Drumheller, Alta.....	Commenced December 22. Against a reduction in wages. Unterminated.	100	2,400
Coal miners, Sydney, N.S.....	Commenced January 14. Alleged refusal to perform allotted work. Terminated January 17.
METALS, MACHINERY, AND CON-VEYANC'S.—			
Employees of steel and coal com-panies, Sydney, N.S.....	Commenced November 22, 1920. For increased wages and improved working conditions. Unterminated.	150	3,600
Gauge men, Sydney, N.S.....	Commenced June 9. In sympathy with employees of the steel and coal companies. Unterminated.	16	384
PRINTING AND PUBLISHING.—			
Compositors, Montreal, Que.....	Commenced June 14. Objection of men to perform work that came from shop where strike existed. Unterminated.	25	600
Compositors, etc., Vancouver, B.C....	Commenced May 2. For increased wages and 44-hour week. Unterminated.	40	960
Photo engravers, Ottawa, Ont.....	Commenced May 2. For increased wages and 44-hour week. Unterminated.	12	248
Printers, Montreal, Que.....	Commenced July 1. For increased wages and 44-hour week. Unterminated.	370	8,880
Printers, Ottawa, Ont.....	Commenced June 1. For increased wages and 44-hour week. Unterminated.	165	3,960
Printers, Toronto, Ont.....	Commenced June 1. For increased wages and 44-hour week. Unterminated.	141	20,184
Photo engravers, Montreal, Que....	Commenced May 2. For shorter hours. Untermi-nated.	30	720
Printers, Winnipeg, Man.....	Commenced July 1. Alleged lockout following refusal of employers to renew agreement. Unterminated.	131	3,144
Printers, bookbinders, pressmen, etc., Halifax, N.S.....	Commenced May 2. For shorter hours. Unterminated.	42	1,008
Typesetters, pressmen and book-binders, Hamilton, Ont.....	Commenced May 1. Alleged violation of agreement by employers. Unterminated.	10	240
Lino-type operators, etc., Garden-vale, Que.....	Commenced January 7. Disagreement over union status of the employees. Information received indicates conditions no longer affected.
CLOTHING.—			
Garment workers, Montreal, Que....	Commenced November 9. Against a reduction in wages and other working conditions. Settled by negotiations. Work resumed February 27.	200	4,400
Garment workers, Montreal, Que....	Commenced December 19. Against increase in working hours and employment of non-unionists. Untermi-nated.	90	2,160
Tailors, Charlottetown, P.E.I.....	Commenced January 16. Against a reduction in wages. Unterminated.	50	1,200
FOODS, LIQUORS AND TOBACCO.—			
Cigarmakers, Vancouver, B.C.....	Commenced May 31. Alleged violation of agreement by employers. Information received indicates con-ditions no longer affected.
LEATHER.—			
Shoemakers, Toronto, Ont.....	Commenced April 26. Against reduction in wages. Terminated February 22.	9	152
Strikes commencing during February, 1922			
MINES, SMELTERS, QUARRIES, CLAY PRODUCTS, ETC.—			
Coal miners, Drumheller, Alta.....	Commenced February 22. In protest against reduc-tion in contract mining rates. Unterminated	230	1,380
PRINTING AND PUBLISHING.—			
Compositors, Quebec, Que.....	Commenced February 23. In protest against an the 44-hour week. Unterminated.	160	1,920
CLOTHING.—			
Garment workers, Hamilton, Ont....	Commenced February 23. In protest against an alleged reduction in wages. Unterminated.	25	125
Garment workers, Montreal, Que....	Commenced February 17. In protest against a change in working conditions. Unterminated.	60	600
TEXTILES.—			
Knitters, Paris, Ont.....	Commenced February 6. In protest against a pro-posed reduction of wages. Terminated February 18.	25	275
BUILDING AND CONSTRUCTION.—			
Sheet metal workers, Toronto, Ont.	Commenced January 2. Against a reduction in wages. Un-terminated.	150	3,600
LUMBERING.—			
Loggers, Merritt, B.C.....	Commenced February 6. For increased wages and an 8-hour day. Settled by 15 negotiations; work resumed February 15.	150	1,350
MISCELLANEOUS.—			
Waiters, Toronto, Ont.....	Commenced February 27. In protest against alleged objection to employment of waitresses. Untermi-nated.	50	100

STRIKES AND LOCKOUTS IN CANADA DURING 1921

DURING the year 1921, there was a considerable reduction both in the number of strikes and in the number of employees involved as compared with any year since 1916. As compared with 1920, however, the time loss was slightly greater. A feature of the year was the number of strikes in the printing trades for the 44-hour week. Many of these strikes were unterminated at the end of the year.

There were 145 strikes and lockouts during the calendar year. Of this number, seven were carried over from 1920, making a net total of 138 strikes commencing in 1921. The number of employees involved in the 145 disputes was 22, 930 and the total time loss was estimated at 956,461 working days. This is ascertained by multiplying the number of men directly affected through a strike or lockout by the number of working days they are so affected during the time the firm or establishment is involved.

A strike or lockout, counted as such by the Department of Labour, is a cessation of work involving six or more employees and of not less than forty-eight hours duration. Unless a dispute corresponds to this definition it is not classified as a strike or a lockout, and is not included in the officially published statistics, although a record of it is kept by the Department. During 1921 there were 22 such unclassified disputes involving 1,486 employees and a time loss of 2,020 working days.

In only 3.4 per cent of the strikes, 1,000 or more employees were involved,

and in 67.6 per cent of the strikes less than 100 employees were involved. A large proportion of the strikes were of brief duration, 43.6 per cent terminating within 15 days. Slightly over 30 per cent of the strikes exceeded 30 days duration. In respect to time loss, 22.5 per cent of the disputes resulted in a loss of less than 500 working days each. In 49.7 per cent of the disputes, the resulting time loss was less than 1,000 working days each. There was only one strike which resulted in a time loss exceeding 100,000 working days.

There were several prominent strikes which contributed largely to the total time loss. Among these were: a strike of the building trades at Ottawa from May 2 to July 13, involving 1,400 employees and a time loss of 59,720 working days; a strike of pulp and paper mill workers at Sault Ste. Marie from May 11 to July 4, involving 2,000 employees and a time loss of 90,000 working days; a strike of printers in Montreal (untersminated) involving 450 employees and a time loss of 63,140 working days; and a strike of printers in Toronto (untersminated) involving 825 employees and a time loss of 147,734 working days.

An analysis of the strike situation for the year in each province indicated that Ontario was affected to a greater degree than any other province. In Ontario, the year's summary showed 53 strikes (36.6 per cent of the total) involving 10,800 workpeople (47.1 per cent of all those involved in strikes) and an estimated time loss of 521,210

working days (54.5 per cent of the total). Quebec was second with 25 disputes, involving 5,511 employees and a time loss of 236,124 working days. British Columbia ranked third in the number of strikes and the number of employees involved, having 18 strikes involving 2,298 employees, but Nova Scotia had the third greatest time loss with a total of 67,737 working days.

The months of May and June being the period of renewal of many contracts, or making the peak of the year's building and construction activities, a large proportion of the strikes and disputes as a rule occurred in these months. The year 1921 was marked by an unusually large number of strikes in the building trades, prolonged to an unusual degree and therefore causing a considerable time loss during the balance of the year. The number of strikes beginning in May was 38, of which 18 were in the building trades. The time loss in working days during May and following months due to these 38 strikes was 324,699. The month in which the smallest number of strikes commenced was October, there being only one, which began two days before the end of the month, involving only 31 employees and a time loss of 186 working days during the time of its existence. Several of the strikes beginning in May were in the pulp and paper industry, but these were settled about the middle of July. A large number of the strikes in the printing trades also began in May, but a large proportion of the strikes beginning in June were also in the printing trades, and as these disputes were in many cases untrminated at the end of the year, the time loss in working days was great. The time loss during the year for the 20 strikes be-

ginning in June was 216,134, or about two-thirds of that for the 38 strikes commencing in May.

The class of industry most affected by strikes depends upon the unit of measurement used. Basing a comparison by time loss alone, the printing and publishing group sustained the greatest time loss with 317,934 working days lost, or 33.3 per cent of the total time loss for the year. The pulp and paper trade was second with a time loss of 201,346 working days or 21 per cent of the total, and the building and construction group was third, losing 153,372 working days. When, however, the unit of measurement used is the number of employees involved, the disturbance to industry through strikes was greatest during the year in the pulp and paper group with 4,257 employees involved. The building and construction trades were next with 4,001 employees involved, and the clothing group third with 3,033 employees involved. The greatest number of strikes resulted in the building and construction trades which sustained 36 strikes; the metals, machinery and conveyances group was second with 19 strikes; and printing and publishing third with 16 strikes.

Classified by causes 115 of the 145 strikes recorded, or 79.5 per cent of the total, involved wages. Of this number, 87 strikes, or 60 per cent, were in protest against wage reductions. There were 9 strikes for increased wages, 8 strikes for increased wages and shorter hours and 11 strikes for increased wages and other changes. In 6 strikes the cause was solely for a reduction in the number of working hours, and 3 strikes were for union recognition.

The record shows that 69 strikes terminated in favour of the employers and 21 in favour of the employees; 36 strikes were settled by compromise, while 19 were indefinite or unterminated. However, using the number of employees as the unit of measurement, the figures show that 13,038 employees were concerned in strikes that terminated unfavourably to them, while 1,817 employees were involved in strikes which terminated in their favour. There were 3,463 employees involved in strikes which were settled by compromises and 4,612 employees in strikes which remained unterminated at the end of the year, or were indefinite in result.

As regards methods of settlement, 60 strikes terminated as a result of direct negotiations between the parties in dispute; 18 terminated through efforts of conciliation or mediation, which were

instituted in most cases through the Department of Labour; and 15 by arbitration. In 19 strikes the employees resumed work on their employers' terms, and in 12 strikes the strikers were replaced by other workers.

In addition to the strikes which remained unterminated at the end of the year, and which involved a time loss, there were three disputes in which according to information received, time loss had ceased to be a factor, but which the unions concerned reported as still being in existence. These were upholsterers in Toronto, cigar makers in Vancouver, and stone mounters and metal polishers in Sackville, N.B.

The accompanying tables give in statistical form particulars of the trade disputes in Canada during 1921 with a summary of the record for the past 21 years.

TABLE I.—RECORD OF LABOUR DISPUTES BY YEARS

Year.	Number of Disputes		Disputes in existence in the year.		
	In existence in the year	Beginning in the year	Employers involved	Employees involved	Time loss in working days
1901.....	104	104	273	28,086	632,302
1902.....	121	121	420	12,264	120,940

*The time loss opposite each month is the sum of the total time losses of all disputes beginning in that month during the whole length of their occurrence.

STRIKES AND LOCKOUTS IN THE UNITED KINGDOM DURING JANUARY, 1922.

THE following details with regard to strikes and lockouts in the United Kingdom during January, 1922, based on returns from employers and workpeople, are taken from the February issue of the British LABOUR GAZETTE.

NUMBER, MAGNITUDE AND DURATION.

The number of trade disputes involving a stoppage of work, reported to the Department as beginning in January, was 57, as compared with 35 in the previous month, and 44 in January, 1921. In these new disputes about 13,300 workpeople were directly involved, and 600 indirectly involved (i. e., thrown out of work at the establishments where the disputes occurred, though not themselves parties to the disputes). In addition to the numbers involved in new disputes, about 4,600 workpeople were involved, either directly or indirectly, in 36 other disputes which began before January, and were still in progress at the beginning of that month. The total number of new and old disputes in progress in January was thus 93, involving about

18,500 workpeople, and resulting in a loss during January of about 184,000 working days.

CAUSES.—Of the 57 new disputes, 36, directly involving about 6,800 workpeople, arose out of proposed reductions in wages; 10, directly involving 1,800 workpeople, on other wages questions; 6, directly involving 600 workpeople, on questions respecting the employment of particular classes or persons; 3, directly involving 2,400 workpeople, on details of working arrangements; and 2, directly involving 1,700 workpeople, on questions of trade union principle.

RESULTS.—During January settlements were effected in the case of 18 new disputes, directly involving about 5,200 workpeople, and 18 old disputes, directly involving about 1,500 workpeople. Of these disputes, 4, directly involving 300 workpeople, were settled in favour of the workpeople; 20, directly involving 3,400 workpeople, in favour of the employers; and 12, directly involving 3,000 workpeople, were com-

promised. In the case of 4 disputes, directly involving about 1,400 work-people, work was resumed pending negotiations.

The following table classifies the disputes by groups of trades, and indicates the number of workpeople involved (whether directly or indirectly) at the establishments concerned, and the approximate time lost during January in all the disputes in progress:—

Groups of Trades.	Number of disputes in progress in January			Number of workpeople involved in all disputes in progress in January	Aggregate duration in working days of all disputes in progress in January.
	Started before January, 1	Started in January	Total		
Building.....	6	5	11	800	6,000
Mining and quarrying.....	10	12	22	8,800	92,000
Metal, engineering and shipbuilding	4	5	9	1,000	7,000
Textile and clothing.....	6	4	10	1,400	30,000
Transport.....	1	9	10	2,800	13,000
Other trades.....	9	22	31	3,700	36,000
Total, Jan., 1922	36	57	93	18,500	184,000
Total, Dec., 1921	50	35	85	14,600	127,000
Total, Jan., 1921	49	44	93	37,000	758,000

The principal new dispute was that which began on January 27, involving slaughtermen, meat dressers, etc., in London, Liverpool, Birkenhead and Wallasey, and arising out of a proposed reduction in wages. It is estimated that at the end of January about 1,000 workpeople were involved in the dispute, but early in February meat porters, etc., in London also struck work for a few days in sympathy. The dispute involving over 1,500 coal miners near Sunderland, which had been in progress since October, 1921, continued throughout January. In the case of both of these disputes no settlement had been reported at the time of going to press.

Of the 184,000 working days lost in January by all the disputes in progress, about 92,000 were lost by disputes which began before January and were still in progress at the beginning of that month, and about the same number by disputes which began in the month.

SPECIAL CONVENTION OF THE UNITED MINE WORKERS OF AMERICA

WHEN the twenty-eighth convention of the United Mine Workers of America held at Indianapolis, Ind., from September 2 to October 5 (see LABOUR GAZETTE, November, 1921, page 1368) adjourned, it was arranged that it should reconvene not later than February 14, 1922, to receive and consider a report of the scale committee, to whom had been delegated the duty of drafting a proposed wage scale, and to formulate wage scale demands. On February 14, the convention resumed its sessions at Indianapolis.

The report of the scale committee opposed any reduction in "mining prices," and insisted "that the present basic wage schedules be maintained." It recommended that "inequitable differ-

entials within and between districts, unfair working conditions and internal differences, wherever existing, be adjusted upon a fair and satisfactory basis and the joint conferences in the respective districts be empowered to make such adjustments." The present eight-hour day was stated to be merely theoretical, the mine workers being compelled to spend greatly in excess of eight hours in the mines. The committee held that eight hours out of twenty-four is the maximum amount of time any mine worker should spend underground, and it recommended that all new agreements be based upon the eight-hour day underground. It also recommended double time for Sundays and holidays, time and a half for overtime; weekly pay

days; elimination of automatic penalty clauses in wage agreements; the ratification of anthracite wage demands formulated at a convention held in Shamokin, Pennsylvania, from January 17 to 20, 1922; that the next scale cover a period of two years from April 1, 1922; that the operators in the Central Competitive Field live up to the agreements of March 31, 1920, and confer on a new wage agreement, and that the president of the International Union and the presidents of Districts 1, 7 and 9, comprising the anthracite area should make arrangements for holding a joint conference with the anthracite operators to negotiate a new agreement there; that in case no agreement is reached in anthracite and bituminous fields by April 1, a general suspension of mining operations be declared, subject to a referendum vote of the membership of the United Mine Workers previous to March 31. The report advised the ap-

pointment of a committee to be composed of the scale committee of the Central field, three men from each outlying district, and the international executive board and officers "to take such action for the protection of our best interests as circumstances may require, and to advise the membership upon unexpected developments which may arise and which cannot now be foreseen." It was recommended also that when an agreement may be made in the Central Competitive Field, the outlying districts be authorized to enter into joint negotiations for wage agreements as in the past, such agreements to run concurrently with the basic agreement in the Central Competitive Field, but that "any wage scale negotiated must be submitted to a referendum vote of the membership affected for approval before it is finally accepted."

CONVENTION OF DISTRICT 26, UNITED MINE WORKERS OF AMERICA

A special convention of District 26, United Mine Workers of America, was held at Truro, N.S., on February 23 to 25, 1922, under the presidency of Mr. Robert Baxter, to consider the wage situation and unemployment among the members. About 70 delegates attended.

It was pointed out that Nova Scotia could not take advantage of the Dominion government offer for unemployment relief because the provincial law prevented a municipality or town from granting such relief except where an application is made under the Public Charities Act, which results in the disfranchisement of the applicant. The convention decided to request that the laws of Nova Scotia be so amended that unemployment relief may be granted without regard to this Act.

By a resolution the executive was instructed to take up the cases of three members who were unemployed following their having been transferred from

the work at which they were engaged so as to enable the management to place boys seeking employment. It was claimed that these men, who had given satisfaction at their former work for a number of years, could not continue at the work of shooting and loading to which they had been assigned. Special consideration was to be given to the case of one of these men who had a medical certificate showing that he had been gassed and should receive a place clear of smoke and dust. The convention also decided, in order to relieve the unemployment situation at Springhill where two mines were idle, to have the executive proceed at once to negotiate a settlement along the lines of previous agreements made between the executive and the superintendents of the Dominion Coal Company. By another resolution, the convention decided to deal with the matter of the wages schedule which had been posted up by the British Empire Steel Corporation,

contending that the company was ignoring their organization by not submitting new rates or differentials to the executive. It was later decided that a meeting should take place at Montreal between officers of District 26 and officials of the British Empire Steel Corporation, with a view to negotiating a wage agreement, the question of how far the officers should go in the matter of compromise in the negotiations to be left in their own hands. This meeting was subsequently held and an agreement reached on March 1, subject to ratification by members of District 26. The terms agreed upon were: (1) the management has already accepted and put into effect the rates recommended under the Gillen Award, and, in addition thereto, has voluntarily made an adjustment in the datal rates between the minimum rate of \$2.85 per day and certain other slightly higher rates, and

agrees to increase the minimum datal rate to \$3.00 per day; (2) the companies will not object to inclusion in this wage agreement of employees in the general machine shops and shot-firers employed at the collieries. A committee equally composed of representatives of the coal companies and the men to decide on what others of the employees excluded on January 1 should be included in the scope of the agreement; (3) the conditions of the Montreal Agreement to remain in force in all particulars except as regards the rates of wages and as herein modified. The terms if ratified were to become effective between January 1, 1922, and November 30, 1922, both sides to meet twenty days before the expiration of the agreement for the purpose of arranging a new understanding. On March 14, however, by a vote of the miners this agreement was defeated by a large majority.

CONVENTION OF PROVINCIAL BUILDERS' AND SUPPLY ASSOCIATION OF ONTARIO

The tenth annual convention of the Provincial Builders' and Supply Association of Ontario, a body affiliated with the Canadian Association of Building and Construction Industries, was held at Peterboro on February 21 to 23.

In his presidential address, Mr. Norris Gibb, urged co-operation and unity amongst the builders and supply men. He suggested that the convention register approval of the use of bonds instead of cheques and also recognize the value of more adequate cost keeping systems for the building industry. These suggestions were approved by the convention.

In an address on Apprenticeship, Mr. Clapperton, of Toronto, stated that the Public Affairs Committee of the Kiwanis Club, which is training boys for vocations, has decided to establish a boys' employment bureau. Enquiries from several Toronto firms had elicited the information that upwards of 900 apprentices were required to supply the

demand, based on one apprentice for every eight mechanics. The Club, he said, agrees to supply apprentices of good behaviour. It suggests that the mind, and to be responsible for their good behaviours. It suggests that the trades appoint apprenticeship committees and draft apprenticeship agreements with a scale of wages, to contain clauses as follows: (1) giving minimum and maximum age of apprentices; (2) the period of time the apprentice is supposed to serve to become a journeyman; (3) the number of hours per day or week he has to work; (4) the rate of wage he is to receive and the increase in wages he is to receive half-yearly; (5) the time he is expected to attend technical school.

Mr. J. M. Piggott, of Hamilton, introduced a discussion on the Mechanics' Lien Act, and the convention decided to oppose any changes in the act other than changes suggested by the York County Law Association, which had

been appointed by the Ontario government to investigate and report on the act. It was stated that the changes had not altered the main purpose and principle of the act but had improved it and rendered it clearer and more easily understood, except in one instance, where it provided that liens attached to leaseholders should have no force once the rentals are in default. A resolution was adopted instructing the secretary to get in touch with representatives in the legislature who were builders, and also to communicate with the Lien Law committee and offer services on matters that affect the builders.

The convention decided to leave in the hands of the executive consideration of the basic principles of labour relations, as adopted by the Association of Canadian Building and Construction Industries at their recent convention at Hamilton (see LABOUR GAZETTE, February, page 191). The matter of unemployment relief was also left to the executive. It was decided to send to each exchange a list of contractors in the part of the province affected, who were paying dues to the Workmen's Compensation Board, with the object of bringing to the knowledge of the Board those contractors who were not

listed. The following resolutions were also adopted: That protest be made regarding the appointment of a labour man to the Workmen's Compensation Board, when labour is not called upon to make any contribution to the fund, and urging enlargement of the Board to include a representative of the employers, and that protest be also made against any increase in the amount of benefits; that owing to the increasing number of accidents, the Workmen's Compensation Board be asked to take a re-vote on the matter of the formation of an accident prevention association and that the purpose of this association be clearly outlined by the Board when submitting the ballot to the contractors; that the rate of wages referred to in the fair wage clauses of municipal and government contracts should be governed by local conditions; and that a protest be made against the proposed eight-hour legislation, claiming that it would be very detrimental to the construction industry.

The following officers were elected: President, Norris E. Gibb, Sarnia, Ont. (re-elected); vice-presidents, P. McLarty, Sault Ste. Marie, and L. A. Boss, London; secretary-treasurer, George Gander, Toronto.

DOMINION GOVERNMENT ASSUMES LIABILITY FOR COMPENSATION FOR ACCIDENTS TO DISABLED VETERANS.

IN conformity with a recommendation of a Special Committee of the House of Commons appointed to consider questions relating to pensions, insurance, and re-establishment of returned soldiers, an order-in-council (P. C. 4432) was passed on December 29, providing that the Government of Canada assume the liability imposed upon employers on account of industrial accidents in the case of disabled returned soldiers to whom a pension of 20 per cent or over is payable in respect of disabilities received in or attributable to the war.

The text of the order-in-council is, in part, as follows:

The Minister. . . recommends that the Government of Canada assume the liability imposed upon employers of disabled former members of the Forces to whom a pension of 20 per cent or over is payable by the Government of Canada in respect of disabilities received in or attributable to the Great War when such former members of the Forces meet with industrial accidents, subject to the following regulations:

1. (a) In these regulations "pensioner" shall mean a former member of the Forces who is at the time of an accident in respect of which compensation is or damages are claimed,

in receipt of a pension payable by the Board of Pension Commissioners for Canada of not less than twenty per cent in respect of disabilities received in or attributable to the Great War.

(b) "Department," shall mean the Department of Soldiers' Civil Re-Establishment.

(c) "Compensation" shall mean and include all amounts to which a pensioner is, or, in the case of his death, his dependents are, entitled under or by virtue of any Workmen's Compensation Act in force in any province of Canada.

(d) "Full Cost of Compensation" shall include compensation, burial expenses, the cost of furnishing medical aid, and all other amounts payable under or by virtue of a Workmen's Compensation Act in force in any province of Canada by reason of a pensioner's meeting with an accident or by his contracting an industrial disease, compensable under any of said acts, and shall include the capitalized sum or present value of the amount required, as determined by the Workmen's Compensation Board having jurisdiction with respect thereto, to provide for future payments of compensation to the pensioner or his dependents.

(e) "Accident" shall include an industrial disease compensable under a Workmen's Compensation Act in force in the Province where such disease is contracted.

2. (a) The Department shall pay to each employer of a pensioner the amount of assessment, if any, paid by such employer to a Workmen's Compensation Board with respect to the wages or other allowances paid or made to such pensioner, provided that said employer shall furnish to the Department a statement giving the following information in respect of such pensioner:—

(i) Name, address, ex-regimental number or pension number.

(ii) Date employment commenced.

(iii) Date employment ceased if pensioner is not employed at the time of making the statement.

(iv) Total amount of wages paid or other allowances made during the period for which reimbursement is claimed.

(v) Rate of assessment levied by the Workmen's Compensation Board upon the wages paid and other allowances made to such pensioner.

(b) The Department shall also pay to the Workmen's Compensation Board the full cost of compensation with respect to all accidents to pensioners in the Province for the period covered by the Board's certificate hereinafter referred to less all amounts paid or payable to all employers under sub-section (a) hereof for such period; such payment or payments to be made upon receiving a certificate from the Workmen's Compensation Board of the full cost of compensation, which certificate may be accepted by the Department without other proof.

3. Where the employer of a pensioner entitled to compensation is individually liable for the payment thereof under a Workmen's Compensation Act, or under what is known in the Ontario Act as Schedule 2, the Department shall refund to the employer the full cost of compensation upon the employer submitting to the Department a certificate of the Workmen's Compensation Board, showing the amount thereof.

4. In the event of a claim for damages being made against the employer by a pensioner who is injured, or by the dependents of a pensioner who dies, by reason of an accident to such pensioner while employed in an industry not within the jurisdiction of a Workmen's Compensation Board, and in the event of liability therefor and the amount of the damages sustained by the pensioner thereby being admitted by the employer with the consent and approval of the Department, or if damages be awarded against such employer by any court or authority other than a Workmen's Compensation Board, the Department shall submit all the evidence available and a statement of the facts as found by the court or other authority, if the damages shall have been adjudged by any such court or authority, to the Workmen's Compensation Board for the Province in which the accident occurred, or if the accident did not occur in a province in which there is a Workmen's Compensation Board, the same shall be submitted to the Workmen's Compensation Board of any adjoining province, or if there be no adjoining province having a Board, or if the accident happens outside of a province, the same shall, in the discretion of the Department, be submitted to any Workmen's Compensation Board for the purpose of ascertaining what amount or amounts such Board would allow if the accident were one for which compensation would be payable under the Workmen's Compensation Act of the Province for which such Board was appointed, if the industry were within the jurisdiction

of the Board, and the Department shall pay to the employer the amount as agreed upon as aforesaid or awarded by the court or other authority as the case may be, against the employer if the same be less than the amount as determined by such Board, and if it be greater the Department shall pay to the employer the amount as determined by such Board.

5. Where the accident happens outside of a province the employer shall not be entitled to any benefits under these provisions unless the pensioner's employment with such employer commenced in the province and his employment was continuous to the time of the accident, and the accident happens within six months from the last time the pensioner was in the province.

LABOUR LEGISLATION IN SASKATCHEWAN IN SESSION, 1921-1922.

The first session of the fifth Legislature of Saskatchewan opened on December 8, 1921, and terminated on February 9, 1922. Several measures directly or indirectly affecting labour were passed, among the most important of these being an act providing for mothers' allowances on similar lines to the acts in force in other provinces; an act creating a Bureau of Child Protection to administer the Mothers' Allowances, Juvenile Courts and Children's Protection Acts; and an act raising the age of compulsory school attendance from 14 to 15 years.

The Mothers' Allowances Act, 1922, providing for the payment of allowances to the mothers of dependent children, supersedes the Mothers' Pensions Act of 1917. This earlier act, with its amendments, authorized the Lieutenant Governor in Council to make an annual appropriation for the support of widows, or the wives of permanently incapacitated and incurable husbands, who were otherwise unable to take proper care of their children; and further authorized the attorney-general to require from the municipality concerned a contribution up to three dollars per week in respect of each child so provided for. To take the place of this plan, the new act establishes a definite scheme for mothers' allowances on similar lines to the schemes now existing in Ontario, Manitoba, Alberta, and British Columbia. The qualifications of applicants and the conditions of payment are as follows: Monthly payments are authorized to be made out of a sum granted for the purpose by the Legislature, for the support, or partial support, of the dependent

children, under 16 years of age, of any woman who by reason of poverty is unable to take proper care of her children, and who is a widow or the wife of an inmate of a penitentiary, or hospital for the insane in Canada, or of a man permanently incapacitated from contributing to the support of his family. Allowances are also provided for unmarried women or widows having charge of orphan children, whether they are relations or other persons suitable to act as foster mothers, provided that they have not the means of properly caring for the children without such assistance. As qualifications for an allowance a woman must have resided in Canada for two years, and in Saskatchewan for one year, prior to making application; must continue to reside in the Province with her children; and must be recognized as a fit and proper person to have custody of children. The duty of passing upon claims, and carrying out the act, subject to the Minister, is in the hands of the Superintendent of Neglected Children, who is to be appointed under the Children's Protection Act, referred to elsewhere in the present article. The act further provides that when legislation has been passed in another province for reciprocal action with regard to beneficiaries in Saskatchewan the superintendent may recommend to the Lieutenant Governor in Council the grant of an allowance to any person who has been in receipt of an allowance in such other province and moves into Saskatchewan, or who has resided in such other province and in Saskatchewan for periods which together equal the term of residence required by the

act in the case of a resident in Saskatchewan. The Mothers' Allowances Act comes into force on May 1, 1922.

Under the Bureau of Child Protection Act, a permanent bureau is established, consisting of the Commissioner of Child Protection and other officers, appointed by the Lieutenant-Governor in Council. The duties of the new bureau are to administer the Children's Protection Act, the Juvenile Courts Act, the Mothers' Allowances Act, and any other acts which may in future be assigned to it by the Executive Council. The Commissioner of Child Protection also assumes the functions of Superintendent of Neglected and Dependent Children. The Children's Protection Act, above referred to, was amended during the session in regard to the organization and incorporation of children's aid societies, or societies for the purpose of protecting children from cruelty or of caring for and controlling neglected children.

Schedule B of the Factories Act was amended so as to conform with the existing definitions of "child" as a male person under the age of 14 or a female person under the age of 15; of "youth" as a male person between the ages of 14 and 16 years; and of "young girl" as a female person between the ages of 15 and 18 years.

The authority of the Minimum Wage Board in regard to the fixing of "reasonable hours and proper sanitary conditions and requirements," was, by an amendment to the Minimum Wage Act, made subject to the provisions of the Public Health Act, as well as to those of the Factories Act, as already required.

The Steam Boilers Act, which formerly included in its scope only boilers of two horse-power or more, was amended,

the Provincial Chief Inspector of Steam Boilers being given authority to apply the provisions of the act to boilers below that standard, after due notice has been given in writing to the owner that such action will be taken.

Under the Thresher Employees Act of 1909, with its amendments, an employee for wages on or about any threshing machine was previously restricted in regard to his claim against the unpaid earnings of his employer, the condition being laid down that, to establish such a claim, the employee must have been engaged with the employer with respect to such unpaid earnings. This condition was removed by an amendment during the late session, employees now having unrestricted claims. Another amendment related to procedure in connection with the serving and investigation of such claims.

The Attachment of Debts Act, which includes provisions for the attachment of wages or salary, was amended in regard to costs in garnishee proceedings, the question of costs being left to the discretion of the court, instead of, as formerly, being generally in favour of the judgment creditor.

The age limit for the compulsory attendance of children at school was, by amendments to the School Attendance Act, raised from fourteen to fifteen years, the employment of children under that age being prohibited while schools are in session. This amendment will take effect on July 1, 1922. Several other educational enactments were passed, including provision for an allowance of \$200 to any rural district erecting a teacher's residence; the prohibiting of members of vocational education committees from benefiting from school contracts, and the fixing of penalties for violations of this prohibition; and administrative changes in the Secondary Education Act. By the Bureau of Publications Act a permanent bureau was provided for, commencing May 1, 1922, to organize travelling libraries, book clubs on the "open shelf" plan, educational moving pictures, etc.

INJUNCTION AGAINST PICKETING AT WINDSOR, ONT.

An important decision with regard to an injunction against picketing was recently delivered by Mr. Justice Rose in Toronto, in the case of *Meretsky v. Arntfield*. The matter arose from a strike of four employees of the Windsor Theatre at Windsor, Ontario, which took place on January 27. It appears that when the theatre changed hands at the beginning of the year, the manager informed the employees that he could not pay the wages which had been agreed upon last September by the Border Cities Managers' Association and the Moving Picture Machine Operators' Union and the Federation of Musicians. A meeting between the manager and the executive board of the union failed to effect a settlement, and the employees were then notified that on and after February 4, their services would be no longer required. Three musicians and one operator stopped work on January 27, and the union had the following notice printed:

Notice.—The Windsor Theatre is Unfair to Organized Labour. Patronize Theatres that are fair to Organized Labour, and Help us to Help Others.

The owner of the theatre then obtained the following interim injunction against the Theatrical Stage Employees' Union and the Windsor Federation of Musicians:

Restrainng defendants, and each of them, their servants or agents, until trial, from publishing by means of handbills or banners, or otherwise, the statements that plaintiff or the Windsor Theatre IS UNFAIR TO ORGANIZED LABOUR, or any other defamatory statement of or concerning the plaintiff or the said theatre, and from watching or besetting the said theatre for the purpose of persuading or otherwise preventing persons from entering the same, or for the purpose of persuading or otherwise preventing persons from working for the plaintiff or in the said theatre, or for any other purpose, and from procuring, or endeavouring to procure, any person or persons to break his or their contracts with the plaintiff, or with the said theatre.

A motion to continue this injunction was heard by Mr. Justice Rose in the

Weekly Court at Toronto, who delivered the following judgment on February, 18.

Motion by the plaintiff to continue an interim injunction against "picketing," etc., granted by the local Judge of this Court at Sandwich on February 2, 1922.

There is a dispute, the exact nature of which is left somewhat in doubt by the affidavits filed, between the plaintiff and the two trade unions whose officers and members have been enjoined, and the injunction is generally against injuring or conspiring to injure the plaintiff in the conduct, management or operation of his theatre, or interfering or conspiring to interfere with the conduct, management or operation of the theatre or the custom or patronage thereof, and specifically against doing certain things "having for their object or being with a view to the furtherance" of the things generally enjoined. The injunction is, therefore, not as wide in its scope as it would seem to be if the words enjoining specific acts were alone looked at: its true meaning is that the specific acts are enjoined only if they have for their object the prohibited injury or interference. But, even as I construe it, it seems to me to prohibit some acts which ought not to have been prohibited, either because there is no evidence that they were really threatened or because they are not necessarily wrongful. In this respect it is too broad. On the other hand, the prohibition of certain of the acts mentioned in it ought not to be qualified by any reference to motive or object, and in this respect it is too narrow. For these reasons I think that it ought not to be continued in its present form, and that a new order ought now to issue.

It has, of course, been necessary to consider the law as to what things, injurious to other persons, a trade union may and may not do in pursuance of its own lawful objects, and I have read the cases cited by counsel and other cases, including a judgment pronounced by MacLennan, J., in the Superior Court of Quebec, Montreal District, on December 16 last, in which the cases cited are all reviewed. This judgment is reported in the *Labour Gazette* for January, 1922, at p. 59; the style of cause is not given, but it appears that the plaintiff's name was Rother.

The evidence before me is unsatisfactory: in the plaintiff's affidavits there are many statements which cannot be taken into consideration because they are made on information and belief without disclosure of the source of the information, and the affidavits filed on behalf of the defendants cover only the acts of one—perhaps the principal—defendant, and what he has been able to learn about the acts of the

others. There is, however, enough positively sworn to and admitted or not denied to show that some interim injunction is necessary, and I shall state what I think that injunction ought to be. I shall, however, refrain from a discussion of the law, for I fear that a discussion of the law applicable to such facts as now seem to be proved might lead to statements which would have no applicability to the real facts of the case as they may hereafter be developed, and might be embarrassing at the trial. I, therefore, confine myself to saying that I take as my model the form of order proposed by Kay, L. J., in *J. Lyons & Sons v. Wilkins*, (1896) 1 Ch. 811, 832, with such modifications as are necessitated by the fact that in section 501 of the Criminal Code there is no clause as there is in section 7 of the Conspiracy and Protection of Property Act, 1875, declaring that attending at a place to obtain or communicate information shall not be deemed a watching or besetting within the meaning of the section. (Section 7 of the Imperial Act is printed in full in the Law Journal's report of *Lyons v. Wilkins*, 65 L. J. (N.S.) Ch. 601, 605, and the relevant parts of it are printed in the report of the case next to be cited); that I note the interpretation which the Court of Appeal in *J. Lyons & Sons v. Wilkins* (No. 2), (1899) 1 Ch. 255, placed upon the words "wrongfully and without legal (in the Criminal Code, *lawful*) authority," found in the first part of the section; that it seems to me that the words printed on the handbills and placard mentioned in the affi-

davits—"The Windsor Theatre is unfair to organized labour"—are *prima facie* defamatory; and that I think that even the most peaceable picketing of the approaches to a theatre is likely to amount to coercion in the case of some of the more timid theatregoers.

I think that the injunction should be an injunction to restrain the defendants and each of them, their servants or agents (in the usual form), from publishing by means of handbills or banners or otherwise the statement that the plaintiff or the Windsor Theatre is unfair to organized labour or any other defamatory statement of or concerning the plaintiff or the said theatre, and from watching or besetting the said theatre for the purpose of persuading or otherwise preventing persons from entering the same or for the purpose of persuading or otherwise preventing persons from working for the plaintiff or in the said theatre or for any other purpose and from procuring or endeavouring to procure any person or persons to break his or their contracts with the plaintiff or with the said theatre.

The facts which I assume to be proved seem to me to require an unqualified injunction until the trial against the doing of the things mentioned: they do not seem to me to justify even a qualified injunction against the doing of the other things that seem to be prohibited by the order as it stands.

The costs of the motion will be costs in the cause unless otherwise ordered by the trial Judge.

WORK OF THE MANITOBA JOINT COUNCIL OF INDUSTRY

THE Manitoba Joint Council of Industry, an account of the work of which appeared in the December issue of the LABOUR GAZETTE, has submitted to the Manitoba Legislature a report of its activities for the year ended November 30, 1921. A summary of the report is given below:

During the year thirty-six cases of dispute have been dealt with. In thirty-two of these cases the Council was able to effect a removal of differences and a settlement of the dispute. In two of the remaining cases the employees declined to accept the finding of the Council, but after a cessation of work of greater or less duration were forced to accept less favourable terms than they had demanded. In the third case, the employers declined to accept the finding

of the Council and were able to enforce their demands upon their employees, numbering about twenty. The remaining case was that of the printers' dispute, which, from the nature of the case, because of its Continent-wide affiliations and because of the wider issues involved than those of wages and conditions, could not yield to the efforts of the Council to restore harmony. It is a guiding principle of the Council that every effort should be made to prevent cessation of work, so that economic loss to both parties and to the community may be avoided, and also that the bad feeling and irritation consequent upon loss of time and money, which always renders restoration of harmony more difficult, may be prevented. In seven cases submitted to the Council a cessation of

work had resulted before the dispute came before the Council. In two of these, work was resumed pending decision of the Council, both parties agreeing to abide by the decision; in one case work was resumed on a basis suggested by the Council, pending settlement by negotiation; in three cases the strike or lockout continued throughout the investigation and settlement was finally reached on some other basis than that suggested by the Council; and, in the seventh case, the Council was unable to suggest a basis for continuing the work because of the relation of the local dispute to the Continent-wide disturbance in the industry. The settlement of these 36 cases necessitated 98 meetings of the Council, with 83 separate interviews between the Council and the parties to disputes. In addition to these, the Chairman held an equal if not greater number of private and preparatory interviews with the parties involved, thus reducing to a minimum the meetings of the Council, with a view to the saving of the time of the members of the Council and of the expense in connection with its work. The classification of these instances of dispute is given as follows: wages, 13 cases; violation or interpretation of agreements, 9 cases; dismissal, for reasons alleged to be unfair, 4 cases; conditions of work, 3 cases; union jurisdiction or discipline, 3 cases; wages and conditions, 3 cases; boycott, 1 case. Cases referred to in particular in the Report include the dispute between electrical workers in the employ of the City Light & Power Department and the City Council, in which case no formal finding was issued by the Council of Industry, but an effort was made to obtain such a modification of the civic contract as would secure the end sought by the City Council and at the same time remove from it the element of alleged injustice of which these employees complained. Reference is made to several instances in which the Council emphasized its insistence upon the binding nature of agreements. The claim of the secretary of the Central Labour Council of the One Big Union, that

the Council should institute legal proceedings against the business agent of the International Brotherhood of Carpenters and Joiners, was also dealt with. This claim was based on the action of the business agent, under the preference clause in the agreement between the General Contractors' Section of the Winnipeg Builders' Exchange and the International Brotherhood of Carpenters and Joiners, the secretary of the Central Labour Council claiming that, at the instigation of the business agent, contractors are unfairly discriminating against members of the One Big Union. The Council points out that, after consultation with the Attorney-General's Department, it is not aware of any law of the Province that has been violated in this connection; but where there appeared to be any danger of hardship or embarrassment resulting either to workmen or contractors, steps were taken to ensure the removal of that danger; and that both parties to the agreement referred to have agreed that in all cases the interpretation of the preference clause suggested by the Council shall be accepted, namely, that, (a), in case of vacancies the members of the International Union should be given preference; (b), if that organization could not supply men the contractor should have the right to engage workers elsewhere; and, (c), the Union should not have the right to demand that such workers be dismissed when members of the Union are again available, but that men on the job should be retained until the conclusion of the job, should the employer so desire. The Council also offered the assistance of the Attorney-General's Department in prosecuting a charge, if the representative of the One Big Union considered that this clause in its present interpretation did effectuate a violation of law or did involve any workmen in the Province in an unlawful curtailment of their liberty or infringement of their rights. In this attitude the Council felt that it justified its claim to stand on terms of perfect equality to all labour organizations in the Province.

Reference is also made to investigations

conducted by the Council in regard to: cost of living, labour turnover, labour legislation, profit sharing systems, wages, production costs, unemployment, apprenticeship and industrial education. The Chairman of the Council concludes the Report by expressing his judgment, that it is not only a matter for congratulation that the findings of the Council have been in every case unanimous, but it is also a significant proof of the judicial spirit of the members of the Council and of their attitude of detachment toward the cases submitted, and remarks that this unanimity of decision gives a quite unique weight to the findings of the Council.

The following is a summary of three cases which were recently referred to the Joint Council of Industry.

CLASSIFICATION OF MUNICIPAL EMPLOYEES.

A former employee of the City of Winnipeg submitted a complaint that although he had been continuously employed by the City in different departments from July, 1919 to October, 1921, he had been refused recognition as a permanent employee with the attendant holiday and salary rights.

After investigation the Council of Industry issued the following statement.

The Council of Industry went into the matter of the claim of Mr. B— against the City and gave the question careful consideration, consulting with various aldermen. The Council came to the conclusion that it would be unwise for Mr. B— to press the claim any further, for the following reasons: First; the decision of the City Council was taken after very careful and sympathetic study of the whole case, both in committee and in council. Second; The question is really one of classification of employees. Third; Any Corporation has a right to interpret its own classification, and no other body has the right to interfere. Fourth; though it seems to work hardship in some cases, and though it is difficult in all cases to determine just where the line which distinguishes one class from another should be drawn, yet the classification upon which the City Council based its action seems to be quite definite.

The Council of Industry does not feel justified in intervening in this case, and cannot advise any further claim on the part of Mr. B—.

REDUCTION IN RANK FOLLOWING AGREEMENT WITH UNION.

An employee of the Manitoba Government Telephone Commission lodged a complaint with the Council alleging unfair treatment at the hands of the Commission. From the report of the Council it appears that this employee had applied for work during the general strike in the spring of 1919. He made the following statements with regard to his case: That when he was appointed to the staff on July 2, 1919, he had received from the Superintendent a definite promise of seniority above all others in the Department of Outside Construction; that a list of seniority was made out, upon which his name appeared in first place; that this arrangement remained in effect until December, 1920, when a new list was posted which showed his position to be changed from No. 1 to No. 58; that he by formal letter made a protest against his position on this list; that in consequence of this change and by reason of slackness of construction work he found himself reduced from the position of foreman to that of lineman, with consequent change in wage scale.

The Management accepted this statement as substantially accurate but further affirmed: First, the seniority which was promised Mr. C— was not absolute seniority, but relative, namely seniority in the Department of Outside Construction only, in which Department he was senior foreman; second, That in negotiating with the International Brotherhood of Electrical Workers with a view to reaching an understanding upon the matter of seniority as affecting all the outside workers, the Commission considered it advisable and necessary to accept the principle that the seniority which existed prior to the strike should be made applicable to all positions which were open at the date, June 26, 1919, when the strike was declared over and the men taken back for employment; and, Third, That no special arrangement was made to deal with the rights

and claims of Mr. C— in making this arrangement with the Union.

The decision of the Council was as follows:

The Council, while appreciating the view of the Commission that it was desirable to arrive at a settled condition of agreement with the Union in regard to the seniority of outside employees in order to the harmonious carrying on of the work of the Commission, and that once this agreement is effected pre-war seniority is thereby established, is nevertheless of the opinion that, inasmuch as Mr. C—at the time of his appointment was definitely engaged as Senior Foreman in the Department of Outside Construction, and inasmuch as he was given definite promise of seniority in that Department and was shown as holding this position on the list under which the Department operated for more than a year, he had a reasonable ground to believe that the Department had contracted to give him an asset of very substantial value, and that when he asserted the claim that this contract had been violated it was the duty of the Commission to investigate his claim and if found to be supported by facts to have dealt with it in an equitable and just manner before entering into any arrangement which would necessarily negative any such claim on the part of Mr. C—.

DISMISSAL OF EMPLOYEES OF THE RAILWAY DEPARTMENT OF THE GREATER WINNIPEG WATER DISTRICT.

Certain former employees of the Railway Department of the Greater Winnipeg Water District claimed that they had been harshly dealt with by the management. The facts, as set forth by the Council may be summarized as follows: Owing to a deficit in the operation of this road the Board of Commissioners decided on a change of policy involving a reduction of staff in the running trades. With a view to carrying out this policy the following steps were taken: First, notice was given that the rules and conditions in the Agreement of 1921 under which they were operating would be null and void at the end of thirty days. Secondly, notice was given that on December 31, 1921, all employees in the running trades would cease to be in service of the District. Thirdly, a wage schedule was offered on a monthly basis instead of hourly, with other changes, the offer being accompanied by a form of agreement to be signed by those who wished to remain in the service of

the District under the new conditions. They were requested to sign the form within a very few hours. A number of employees signed the agreement and returned it within the time specified, but others who signed it were unable to return it within the time assigned. Out of twelve employees four men were selected to compose the running crew. The men claimed that this method of dealing with them was unnecessarily peremptory and harsh and that it ignored the rights and precedents well recognized in the railway service; that the method of selection was unjust inasmuch as two of the men chosen had signed the agreement before it had been issued to the other employees, and a verbal agreement had been made with a third before his application was signed; and that in making selection there was almost a complete disregard of the principle of seniority.

With regard to this matter the Council made the following observations:

The Council frankly recognizes the right of the Management to make such changes in policy as it may desire, and the fact that in giving thirty days' notice of the termination of the Agreement the Management was acting within the terms of that Agreement; but the Council is of the opinion that in making selection of its new staff its procedure was not such as to show that consideration for the rights and prerogatives and feelings of its employees as would most tend to the promotion of that right and proper feeling which should exist between employer and employee in industry in this country. Further, and more especially, the Council is of the opinion that it was a mistake to request all of the twelve employees to sign an agreement to enter the service of the District upon certain conditions, when only four were to be selected for the service; and, secondly, that it was manifestly unfair to invite a number of employees to sign an agreement to enter a service in which three out of four positions available had already been filled; and, third, that in making selection of its new staff a just and fair consideration should have been given to the principle of seniority. The Council is of the opinion that these errors might have been avoided and the feeling of injury in the minds of the former employees of the District have been prevented if there had been a frank, full and open conference between Management and employees, at which there would have been a fair and equitable adjustment of the claims of the employees and of the interests of the service effected.

On February 20, the legislature of Manitoba, by a vote of 21 to 19, refused to pass the estimates of the Government for the administration of the Industrial Condition Act, under which the work of the Manitoba Joint Council

of Industry was carried on. A subsequent effort by the Government to restore this item of the estimates was negated by a vote of 25 to 23.

THE KANSAS COURT OF INDUSTRIAL RELATIONS.

THE Kansas Court of Industrial Relations, which has been in operation since January, 1920, (See LABOUR GAZETTE, March and May, 1920, pp. 300 and 550 June, July and November, 1921, pp. 757, 921 and 1369) has rendered decisions in thirty-three cases, twenty of which were presented by trade unions, and nine by unorganized groups.

Up to the present there has been only one appeal to the Supreme Court of the State with respect to any decision of the Industrial Court. The Supreme Court on October 8, 1921, rendered a decision respecting the contention of an employer that the Court of Industrial Relations had not the authority to direct the payment of a scale of wages fixed by it. The action (Court of Industrial Relations v. Chas. Wolff Packing Co., 201 Pac. 418) was for a writ of mandamus to compel the company to recognize and put into effect a scale established by the Court. The first contention related to procedure, the point being that the Court of Industrial Relations could not sue in its own name or prosecute actions in the Supreme Court. The law creating the Court was quoted, and various comparable statutes cited, the conclusion being reached that while the Court was not itself directly interested in the result of the action, the State, the actual party in interest, had authorized the Court to bring the action. The proceeding was therefore declared to be proper. The next contention was that as the Court was to compel the payment of wages to certain employees, the proper procedure would be for those employees to sue on their respective accounts. The Supreme Court rejected this, saying that the action was brought to compel

the company to obey an order of the Court of Industrial Relations fixing a scale of wages and establishing hours of labour to be observed by the employer in its business. An action in mandamus to compel such observance was therefore the proper one, and properly brought by the Court of Industrial Relations. A third point was to the effect that the proceedings of the Court were of a legislative, not a judicial, nature. This was based on a provision permitting an interested person to commence proceedings in the courts of the State to compel the Court of Industrial Relations to make just, reasonable, and lawful orders, which, it was claimed, would, in effect, be legislation. It was pointed out that the company was not seeking the establishment of an order, which this provision of the law bears upon, but was resisting an established order, so that this contention could avail it nothing. A further insistence that the orders of the Industrial Court are not effective until approved by the Supreme Court was rejected.

The net point urged was that the fixing of wages is an extraordinary power, not to be exercised except in cases of emergency. The law provides for a recognition of controversies such as might endanger the continuity or efficiency of service of an industry declared by the law to be affected by a public interest. Such a state of affairs was held to have been properly alleged in the case in hand, so that an emergency was regarded as having arisen justifying the action taken.

The final contention was that the act interferes with the freedom of contract, depriving the defendant of its liberty and property in violation of the four-

teenth amendment of the Constitution of the United States. It was urged that the employees cannot be governed by the orders of the Court of Industrial Relations, that their wages are not affected by a public interest so as to be subject to State regulation, that the right to contract is violated, and that the classification of the business covered is arbitrary and unjust.

Each of these propositions was considered in order and all were disposed of in favour of the validity of the law. The statute does in fact measurably restrict the course of action of both employers and employees, but neither par-

ty is compelled to surrender its rights to an extent injurious to its own financial success, while the interest of the public is so clearly demonstrated that the right of the State to intervene must be sustained. "The State is not powerless to regulate the wages to be paid for labour in those enterprises without the continuance of which the people must suffer." The discretion of the legislature in classification was also regarded as properly exercised in this case, the classification being reasonable and not arbitrary nor hostile. All justices, therefore, concurred in upholding the law and approving it as applicable to the case in hand.

MINIMUM WAGE ORDERS GOVERNING ALL RETAIL STORES IN ONTARIO.

DURING February and March the Minimum Wage Board of Ontario issued five new orders, completing the series of orders which will govern the minimum wages to be paid to saleswomen and other employees in all retail stores throughout Ontario. Order No. 3 (see

MINIMUM WAGES OF FEMALE EMPLOYEES IN RETAIL STORES IN ONTARIO

	In Toronto.	In cities of population over 50,000 (except Toronto).	In cities of population of 30,000 to 50,000.	In cities and towns of population of 10,000 to 30,000.	In cities and towns of population of 4,000 to 10,000.	In towns and villages of population of 1,000 to 4,000.	In remainder of province.

LABOUR GAZETTE, September, 1921, page 1156) applied to retail stores in Toronto. Order No. 6 (see LABOUR GAZETTE, December 1921, page 1485) applied to stores in cities of Ontario having a population over 50,000. The first of the new orders extends the operation of Order No. 6 so as to apply to cities having from 30,000 to 50,000 population. All the foregoing orders govern the selling force, and include cashiers, parcelers, messengers and other employees working with the saleswomen, but not on the office or operative staff. In the orders which follow, milliners, dressmakers, office workers and factory workers are expressly excluded. These new orders fix the minimum wage to be paid to the same classes of workers in cities, towns and villages having respectively from 10,000 to 30,000; from 4,000 to 10,000; from 1,000 to 4,000; and lastly, in the remainder of the Province. The new orders all become operative on April 17, 1922.

For convenience of reference the provisions of the earlier orders are repeated in the accompanying table which summarizes the amounts of minimum wage for corresponding classes of workers in the various types of community throughout the province.

In Toronto minors are further subdivided according to their age on commencement of employment, and the minimum wages are fixed accordingly, as follows:—

Girls commencing at 16 years:

1st 6 months.....	\$ 8.00
2nd 6 "	9.00
3rd 6 "	10.00
4th 6 "	11.00

Girls commencing at 16½ years:

1st 6 months.....	\$ 8.50
2nd 6 "	9.50
3rd 6 "	10.50

Girls commencing at 17 years:

1st 6 months.....	\$ 9.00
2nd 6 "	10.00
3rd 6 "	11.00

Girls commencing at 17½ years:

1st 6 months.....	\$ 9.50
2nd 6 "	10.00

Girls commencing employment under 16 have a weekly minimum wage of \$7 but the time they work before the age of 16 is not included in the progressive scale.

The schedule of wages for young girls as shown in the foregoing table may continue after the worker passes the age of 18 years, but in no case shall she receive less than the wages prescribed for an inexperienced adult of her own class. The number of inexperienced adults or young girls shall in neither case exceed 25 per cent of the total female working force, except when the total working force is less than four. Females working for less than 36 hours in any one week may be considered to be part time employees, and shall be paid at rates not less than the established minimum wage rate reckoned on an hourly basis for the time they have worked in proportion to the normal week in vogue in the store or shop. Any violation by an employer of this order is punishable by a fine not exceeding \$500 and not less than \$50 for each employee affected, and in addition he must pay the employees the difference between the wages actually received and the minimum wage. In default of payment of this penalty the employer may be imprisoned for a period of not more than 6 months and not less than two months. Every establishment is required to keep a copy of the relevant order posted in some place where it can be seen by the employees. Any female employee not receiving the minimum wage of her class should report to the Minimum Wage Board, Spadina Crescent, Toronto.

ANNUAL REPORT OF SASKATCHEWAN BUREAU OF LABOUR.

THE first annual report of the Bureau of Labour and Industries of Saskatchewan, covering the year ended April 30, 1921, has recently been issued. This Bureau carries on the work formerly done by the Bureau of Labour of the Department of Agriculture, and in addition it is charged with the duty of conducting industrial surveys and promoting the development of the natural resources of the province.

The output of coal for the year 1920 was comparatively small, amounting to 335,389 tons produced by 45 mines employing from 175 men in June to 632 in November, or an average of 467 men. Reference is made to the construction of a briquetting plant, for the purpose of converting lignite into good fuel. In the lumber industry there were 16 saw-mills representing a capital investment of \$1,733,182 and paying in wages and salary \$455,948. There were 5 firms operating in the logging industry with a capital investment of \$33,490, with 325 employees earning \$428,693. The cost of production was \$195,862 and the value of the product, \$774,597.

The growth of manufactories in the province is shown by comparative statistics for the years 1905 and 1918. In that period the capital invested in manufacturing increased from \$3,973,075 to \$39,476,260, the value of products increased from \$2,520,172 to \$50,009,635, the number of manufacturing establishments increased from 80 to 1,422, and the number of employees increased from 1,445 with total earnings of \$721,875 to 8,066 with salaries and wages amounting to \$8,496,195.

An expedition was sent by the Bureau to survey the northern part of the province. Coal outcrops were discovered of good quality in various places, also silica, limestone and mineralized rocks. Fish of excellent quality were in all the waters crossed, and game and fur-bearing animals were plentiful.

The value of buildings on which work was started during 1920 amounted to

\$11,224,826, the total for the four western provinces amounting to \$71,185,100.

Since May 1, 1920, 644 factory inspections were made and 35 recommendations were issued. The number of overtime permits issued from April to December, 1920, was 23, covering 60 days and affecting 623 persons.

In 1920, regulations respecting the construction and operation of passenger and freight elevators, based on regulations in other provinces and various states of the Union were approved by the Lieutenant-Governor in Council. Inspectors were appointed in January, 1921, who visited all the principal cities and towns of the province and inspected 249 elevators. Recommendations were issued to bring many of the elevators to a higher standard, and the inspectors received the cordial co-operation in this respect of all parties interested.

The Minimum Wage Board held four meetings in Regina and Saskatoon during the year, for the purpose of hearing evidence from employers and employees in the millinery and dress-making industries and in hotels, restaurants and refreshment rooms, and amending the regulations affecting these industries. As a result of these meetings the Board allowed a longer period of apprenticeship and a lower wage for apprentices in the dressmaking and millinery industries. A clause was inserted in the regulations concerning hotels, restaurants and refreshment rooms, permitting the employment of women for fifty-six hours a week, all time in excess of forty-eight hours to be overtime paid for at not less than the minimum rate plus fifty per cent. The number of employees directly affected by the minimum wage regulations was 2,184 of whom 892 were employed in shops and stores; 304 in factories and laundries including job printing, milling and meat packing plants and photographers' studios, 348 in mail order

houses, and 630 in hotels, restaurants and refreshment rooms.

In the section of the report relating to industrial accidents it is stated that in the year covered by the report there were reported to the Bureau 14 fatal, 28 permanent and 1,078 temporary accidents, causing a time loss of 17,755 days. In the previous year there were 18 fatal and 795 non-fatal accidents. An analysis of the time in which the accidents occurred shows that the greatest number, 340 out of 1,120 took place between 7 and 11 a.m. and of the days of the week Monday with 190 had the greatest number of accidents. The

analysis by months shows the largest number of accidents occurred during the months of October, November, December and January, the increase being chiefly among railway employees.

The report of the employment service shows that during the year ending April 30, 1921, there were registered in the province 65,189 applicants for work and 71,319 applications for help from employers, and there were made 59,853 placements. The greatest activity was in the agricultural group in which industry 28,592 persons were placed in employment.

COAL STATISTICS OF CANADA FOR THE YEAR, 1921.

THE Dominion Bureau of Statistics has issued a report on Coal Statistics for Canada during the year ending December, 1921. A similar report for the first nine months of the year was summarized in the February issue of the LABOUR GAZETTE. The total output of coal for the calendar year was nearly 15 million short tons valued at \$74,273,000, or \$4.97 per ton. This quantity was 88 per cent of the amount mined during the preceding year when the total output was 16.9 million tons, but it was more than a million tons greater than in 1919. A comparison of the provinces shows that Alberta led with a production of 5,854,420 tons followed by Nova Scotia with an output of 5,734,653 tons, British Columbia ranking third with a production of 2,840,870 tons. Nearly half the total coal produced by Alberta was lignite, while the whole of the Nova Scotia output was bituminous. Of the different kinds of coal produced in the Dominion during the past year, 96,964

tons were anthracite, 1,627,800 tons were bituminous and 3,217,654 tons were lignite. Compared with the previous year there were decreases of all kinds, but compared with 1919 the production of all kinds of coal was greater.

The exports of Canadian coal in 1921 amounted to 1,987,276 short tons, compared with 2,558,223 tons in 1920 and 2,070,050 in 1919. British Columbia with an export of 1,182,528 tons was the province exporting the largest quantity of coal. Nova Scotia ranked next with an export trade of 727,951 tons followed by New Brunswick which exported 71,534 tons.

The total imports of coal into Canada during 1921 amounted to 18,102,620 short tons, of which 13,536,250 tons was bituminous and the balance 4,566,320 tons was anthracite. These imports were about 84 per cent of the amount imported in 1920, but they were slightly in excess of the amount imported during 1919.

INDUSTRIAL STATISTICS FOR 1919 FOR QUEBEC AND THE MARITIME PROVINCES.

PRELIMINARY reports have been issued by the Dominion Bureau of Statistics on Industrial Statistics of the province of Quebec and Industrial Statistics of the Maritime provinces for 1919, with comparative statistics for 1917 and 1918. Similar reports for the western provinces and for the provinces of Ontario were summarized in the January and February issues of the **LABOUR GAZETTE**. The present reports complete the series.

Statistics of Quebec

The following table gives the principal statistics relating to the leading industries of the province for the calendar years, 1917, 1918 and 1919.

	1917	1918	1919
Establishments No	10,052	10,540	11,061
Capital.....\$	823,317,251	860,468,768	936,712,125
Employees on			
salaries.....No	20,607	20,838	26,088
Salaries.....\$	26,659,515	29,667,572	36,539,000
Employees on			
wages.....No	199,411	186,656	179,473
Wages.....\$	131,475,410	146,132,433	153,193,521
Cost of fuel.....\$	19,028,426	19,849,953	15,274,078
Miscellaneous			
expenses.....\$	76,582,910	103,740,427	117,494,828
Cost of materials \$	403,422,445	472,444,599	517,586,980
Value of products \$	839,614,029	920,621,171	988,574,823

In the amount of capital invested the greatest industry was that of electric light and power, of which there were 146 establishments with a total capital of \$130,000,000. Pulp and paper mills of which there were 46, ranked next with a capital of \$124,101,164.

Butter and cheese factories with 1,867 plants led in the number of establishments, followed by lumber, lath and shingle mills of which there were 1,419. In the value of products the largest industry was that of pulp and paper mills which had products valued at \$64,060,540. Lumber, lath and shingle mills came second with a product of \$61,493,959. In all the industries of the province there were 11,061 establishments, with a capitalization of \$936,712,125.

The total cost of materials used amounted to \$517,586,980, and the value of their products to \$988,574,823.

The largest number of employees was in lumber, lath and shingle mills, in which there were 1,844 salaried employees earning \$1,813,760 in salaries, and 16,834 employees on wages earning \$11,548,608.

The table on next page gives information respecting the number of employees and salaries and wages paid in forty leading industries in the province of Quebec during 1919.

Statistics of the Maritime Provinces

The preliminary report of the Dominion Bureau of Statistics on industrial statistics of the three maritime provinces, New Brunswick, Nova Scotia and Prince Edward Island for the year 1919, shows that in these three provinces there were in all 4,227 industrial establishments representing a capital investment of \$224,740,148. There were 4,584 employees on salaries who received \$6,160,932 and 49,465 employees on wages who received \$38,292,432.

The following table shows the principal statistics of the three maritime provinces for 1917, 1918 and 1919:

	1917	1918	1919
Establishments No	4,104	3,972	4,227
Capital invested \$	204,713,399	210,620,190	224,740,148
Employees on salaries.....No	5,324	4,163	4,584
Salaries.....\$	5,329,480	5,167,271	6,160,932
Employees on wages.....No	49,360	51,749	49,465
Wages.....\$	32,883,277	35,421,162	38,292,432
Cost of materials.....\$	146,472,306	131,602,097	133,669,232
Value of products \$	244,304,401	234,436,837	246,081,885

Similar statistics of each of the provinces for 1919 are given in the following table:

	New Brunswick	Nova Scotia	P. E. Island
Establishments.....No	1,439	2,249	539
Capital invested.....\$	89,958,882	131,914,231	2,867,035
Employees on salaries.....No	2,144	2,225	213
Salaries.....\$	3,045,668	2,958,801	156,463
Employees on wages.....No	22,064	25,880	1,521
Wages.....\$	15,877,355	21,593,234	816,843
Cost of materials.....\$	53,471,290	75,928,099	4,269,843

Bread and other bakery products	7	9,350	15	10,520
Totals for Prince Edward Island	389	1,863,807	1,087	548,518

The report also contains statistics of cities and towns in these provinces having a population of 5,000 or over, showing for 1917, 1918 and 1919 the number of establishments, capital, employees, salaries and wages, cost of materials and value of products.

LABOUR AND WAGES IN VARIOUS INDUSTRIES IN CANADA

Reports by Dominion Bureau of Statistics on (a) Pulp and Paper Industry, 1920; (b) Rubber Industry, 1920; (c) Cotton Textile Industry, 1920; (d) Wine Industry, 1920; (e) Aluminum Ware Manufacturing Industry, 1920.

THE Dominion Bureau of Statistics has recently issued preliminary reports for the calendar year 1920 on the pulp and paper industry, the rubber industry, the cotton textile industry, the wine industry, and the aluminum ware manufacturing industry. Previous reports in this series relating to other industries in former years have been outlined in various issues of the LABOUR GAZETTE.

The Pulp and Paper Industry in 1920

The preliminary report on the Pulp and Paper industry in Canada during 1920 shows that there were 100 mills in operation that year, including 40 pulp mills, 27 combined pulp and paper mills and 33 paper mills. The following table shows their distribution by provinces.

Provinces	Pulp mills	Pulp & paper mills	Paper mills	Total for all mills
British Columbia.....	4	2	—	6
Ontario.....	7	13	17	37
Quebec.....	18	12	16	46
New Brunswick.....	5	—	—	5
Nova Scotia.....	6	—	—	6
	40	27	33	100

These mills had a production of 1,960,102 tons of wood-pulp, of which 963,762 tons were for their own use, 238,119 for sale in Canada and 758,221 for export. The quantity of paper produced was 875,696 tons of newsprint, 73,196 tons of book and writing paper, 77,292 tons of wrapping paper, 158,041 tons of boards, and other papers and paper products to the value of \$8,839,888.

The total capital invested in this industry was \$347,553,333 of which the sum of \$103,659,445 was invested in pulp mills, \$221,472,536 in pulp and paper mills and \$22,421,350 in paper mills.

The investments by provinces were as follows:

British Columbia	\$ 36,782,030
Ontario	109,169,591
Quebec	176,347,349
New Brunswick	19,306,351
Nova Scotia	5,948,012

The following table shows the number of employees of various classes in the different provinces with their aggregate salaries and wages.

	Officers superintendents and managers.		Clerks, typists, &c.		Employees on wages.	
	Number	Salaries	Number	Salaries	Number	Salaries
British Columbia.....	42	\$186,579	139	\$477,273	2,834	\$4,953,271
Ontario.....	166	932,848	715	1,082,202	9,190	14,136,687
Quebec.....	315	1,715,443	1,181	1,915,851	14,727	17,674,169
New Brunswick.....	20	70,420	59	101,859	1,379	1,674,496
Nova Scotia.....	17	39,777	15	14,327	499	278,691
Totals.....	560	\$2,945,067	2,109	\$3,591,512	28,629	\$38,717,314

The employees enumerated above comprised 29,940 male and 1,358 female workers. Of the female employees, seven were in the class of officers, super-

intendents and managers, 403 were clerks, stenographers, etc., and 948 were wage earners.

The Rubber Industry in 1920

In the preliminary report on the rubber industry in Canada for the calendar year 1920, statistics are given under two heads, rubber goods and rubber footwear. The province of Ontario had 18 plants manufacturing rubber goods, and Quebec had 6, while the rubber footwear plants numbered 6 in Ontario and 5 in Quebec. The selling value at the factory of rubber goods produced during the year amounted to \$55,122,857. The selling value of the product of rubber footwear factories during the year was \$25,594,451. The capital invested amounted to \$42,249,456 in rubber goods factories, and \$16,120,583 in rubber footwear factories. In the former factories there were 7,195 male and 1,286 female employees earning \$10,132,683 in salaries and wages, and in the latter factories there were 4,195 male and 2,635 female employees receiving in salaries and wages \$6,089,404.

The following table shows the number of employees with their salaries and wages in both kinds of factories:

Classes of employment	Number of employees		Salaries and Wages
	male	female	
RUBBER GOODS FACTORIES—			
Officers, superintendents, managers.....	256	5	\$ 795,627

The Cotton Textile Industry in 1920

The preliminary report of the Bureau of Statistics on the cotton textile industry in Canada during 1920 states that 31 mills reported, of which 13 were in the province of Ontario, 13 in Quebec, 4 in New Brunswick and one in Nova Scotia. The total selling value of their products was \$92,490,002. The capital invested in the industry amounted to \$76,413,703. The number of employees was 17,625, of whom 9,573 were males and 8,052 were females. The salaries and wages amounted to \$13,860,713, of which sum \$12,825,293 was paid in wages.

The number of persons employed in the industry is shown in the following table by classes of employment and sex, with amounts paid in salaries and wages:—

Classes of employment	Number of employees		Salaries and wages
	Male	Female	
			\$
Officers, superintendents, managers.....	88	1	525,952
Clerks, typists, etc.....	250	91	509,468
Wage earners, average number.....	9,235	7,960	12,825,293
Totals.....	9,573	8,052	13,860,713

Classified according to weekly wage payments within specified wage groups, the number of persons at employment by age and sex is presented below:

Specified wage groups	Over 16 yrs.		Under 16 yrs.		Total
	Male	Fe-male	Male	Fe-male	
	No.	No.	No.	No.	No.
Under \$5.....	19	30	3	8	60

Totals.....	8,246	6,744	798	934	16,722

The Wine Industry in 1920

The preliminary report of the Bureau of Statistics on the wine industry of Canada during 1920 covers the operations of 13 individual plants, ten of which were in Ontario, two in Quebec, and one in British Columbia. The total value of the products of these factories was \$1,040,978, the capital invested amounted to \$11,301,465, and the amount paid in wages was \$136,646. The average number of wage earners employed was 90, twenty of whom were outside piece workers.

The Aluminum Ware Manufacturing Industry in 1920

The report of the Dominion Bureau of Statistics on the Aluminum Ware Manufacturing Industry in 1920 contains statistics of four companies which carry on this business in Canada. As no aluminum ores are found in Canada, the ores and metals have to be imported. During the year 1920 the imports of

ores of aluminum amounted to 1,166,990 cwt. valued at \$2,052,478; the imports of ingots, bars, rods, plates, etc., amounted to 1,850,687 cwt., worth \$623,232; and the exports of these articles amounted to 19,716,300 lbs., valued at \$6,094,628. Products of aluminum were manufactured to the value of \$1,647,797, which included fabricated products to the value of \$1,114,092 and cooking utensils to the value of \$278,802. The total amount of capital invested in the industry was \$3,244,566. In the four establishments there were 111 salaried employees including 31 female clerks, stenographers, etc., who received in salaries a total of \$196,159. The number of wage earners ranged from 245, including 37 females, in January and April, to 343, including 65 female workers, in November, the average number of employees being about 291. The wage earners as of December 15, 1920, are classified as follows according to this weekly wage rate:

Weekly wage rates	Male	Female
From \$ 5. to \$10.	8	10
From \$10. to \$20.	40	44
From \$20. to \$30.	176	2
\$30. and over	38	—
	262	56

This includes only one employee, i. e., male, under 16 years of age.

This report is one of a number published by the Mining Metallurgical and Chemical branch of the Dominion Bureau of Statistics, relating to the manufacture of chemical and mineral products in Canada.

OCCUPATION STATISTICS FOR THE UNITED STATES FOR 1920

THE United States Department of Commerce has issued a preliminary statement of the Bureau of the Census, giving occupation statistics for the United States as a whole. The accompanying table taken from this statement, shows the total number of persons ten years of age or over in the United States engaged in gainful occupations, classified according to sex and general classes of occupations in the years 1920 and 1910.

The great decline shown in this table in the number engaged in Agriculture, Forestry and Animal Husbandry, is attributed in large measure to the change in the date of taking the census from April 15, 1910 to January 1, in 1920, the number of farm labourers being naturally considerably smaller in January than in April.

Sex and General Occupational Class	1920		1910	
	Number	Per cent distribution	Number	Per cent distribution
Both Sexes				
All occupations.....	41,609,192	100.0	38,167,336	100.0

WHITLEY COUNCILS ADOPTED FOR THE RAILWAYS IN GREAT BRITAIN

IN the November, 1921, issue of the LABOUR GAZETTE, on pages 1386-7, reference was made to the Whitley Councils provided for in the British Railways Act, 1921. At a conference held in London, on December 23, between six representatives of the railway companies

and six representatives appointed by the railwaymen's trade unions, the scheme of Whitley Councils for the railway service, as originally prepared, was agreed to with some slight modifications. The companies pressed for the postponement of the application of the

scheme until the completion of the scheme for grouping various railways into four amalgamated companies as provided for under the Act. The representatives of the unions, however, objected to postponement. It was finally agreed that the Local Departmental and Stations Committee and the Sectional Railways Councils should be brought into operation on April 3, leaving over the formation of general Railway Councils for the various separate railways until it could be definitely seen what progress was likely to be made towards amalgamating the railways.

The functions of the Councils, which follow generally the lines of the original Whitley Council plan, are summarized in the *British Labour Gazette*, issue of February, 1922, as follows:

LOCAL DEPARTMENTAL COMMITTEES. — At stations or depots where the number of regular employees in a department or in a group of grades exceeds seventy-five, a Committee is to be set up consisting of not more than four elected representatives of the employees in that department or group of grades, and not more than four representatives of the company. At stations where there are less than seventy-five employees in a department or group of grades, it is intended that the employees shall appoint representatives to discuss local matters with the company's local officials.

The objects of a Local Committee are to provide a recognized means of communication between the employees and the local officials, and to give the employees a wider interest in the conditions under which their work is performed. The matters to be considered by a Local Committee include, (a) suggestions for the satisfactory arrangement of working hours, breaks, time recording, etc.; (b) questions of physical welfare; (c) holiday arrangements; (d) publicity in regard to rules; (e) suggestions as to improvements in organization of work, labour-saving appliances, and other matters; (f) investigation of circumstances tending to reduce efficiency, and (g) the correct loading of traffic to ensure safe transit and reduction of claims. Applications on these matters must first be submitted by the employees concerned to the employing company in the usual manner. In the absence of a satisfactory answer within fourteen days the facts may be reported to the secretary of the employees' side of the Committee. In the same way a proposal originating with the company is to be forwarded by the company to the secretary of the employees' side. In the event of the Local Committee being unable to agree on any question, it may be referred by

either side to the Sectional Railway Council. (See below).

SECTIONAL RAILWAY COUNCILS.—Not more than five Sectional Councils, each consisting of not more than twelve elected representatives of the employees and not more than twelve appointed representatives of the company, are to be established on each railway. In addition to the elected and appointed representatives, each side may appoint a Secretary with the right to take part in the proceedings. An example is given of the method of constituting Sectional Councils on a railway, in which the whole staff of the company is divided into five sections, viz.: (1) Clerks, station masters, etc., and supervisors; (2) locomotive men; (3) traffic department men; (4) goods and cartage staff; and (5) engineering department men, plate layers, etc. To the Sectional Councils for each of these five sections, employees' representatives are to be elected by groups of grades within the section, in proportion to the number of employees in each group of grades. There is also an arrangement for the number of representatives allotted to each group of grades to be distributed, as nearly equally as practicable, by districts.

The functions of a Sectional Council are to deal with (a) the local application of national agreements relating to standard salaries, wages, hours of duty, and conditions of service, other than subjects submitted directly to the Central Wages Board by Railway Companies or the Trade Unions; (b) suggestions as to operating, working, and kindred subjects; (c) other matters in which the company and their employees are mutually interested, such as co-operation with a view to securing increased business, greater efficiency and economy; the well-being of the staff; recruitment and tenure of service, etc.; and (d) subjects remitted by the Railway Council (see below) to a Sectional Council.

RAILWAY COUNCILS.—Each railway is to have a Railway Council of not more than ten representatives of each side, the employees' side consisting of two members of each Sectional Council, appointed by the employees' side thereof. Here, again, each side is to appoint a secretary, with the right to take part in the proceedings, in addition to the elected and appointed members.

The functions of a Railway Council are to deal with any of the subjects which may be dealt with by a Sectional Council and which are of common interest to two or more sections, and also to deal with any subject referred to it by a Sectional Council. Before any matter is considered by a Railway Council the Sectional Councils concerned must have had an opportunity of considering it.

PROCEDURE OF SECTIONAL AND RAILWAY COUNCILS.—Meetings of Sectional and Railway Councils are to be held as and when necessary, but there are to be not less than two regular

meetings of each Council annually. Before employees submit any questions to a Sectional or Railway Council they must first submit their application to the employing company in the usual manner. In the absence of a satisfactory answer within twenty-one days the facts may be reported to the employees' secretary of the Council concerned. A proposal emanating from the company's side must be forwarded by the Secretary of the company's side to the secretary of the employees' side. All decisions of a Sectional or of a Railway Council are to be arrived at by agreement between the two sides. If a Sectional Council is unable to agree on any matter, the employees' side may refer it to the Trade Unions concerned, or it may, by agreement, be referred direct to the Railway

Council. If a Sectional or a Railway Council is unable to agree on any question of the local application of national agreements in regard to rates of pay and conditions of service, the matter in difference may be submitted by the employees' side to the Trade Union concerned, who may take it up with the company, and, failing agreement, may refer it to the Central Wages Board.

TEMPORARY ARRANGEMENTS.—The provisions of the scheme relating to the constitution of Sectional and Railway Councils are intended to apply ultimately to the amalgamated companies which will be formed under the Railways Act, 1921. In the meantime, and as a temporary arrangement, they apply to the railway companies now existing.

FAIR WAGE CONTRACTS, FEBRUARY, 1922

DURING February the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to thirteen fair wage contracts, of which four were awarded by the Department of Public Works and nine by the Department of Railways and Canals. All the contracts contained the usual fair wage clause which provides for the prompt payment of such wages as are current in the district in which the work is to be performed, and for observance on the various works under contract of the prevailing hours of labour, and which otherwise prevents abuses and secures the legitimate rights of the labour employed.

A statement was also received as to supplies ordered by the Post Office Department, subject to the Regulations for the Suppression of the Sweating System, the securing of fair wages, etc.

DEPARTMENT OF PUBLIC WORKS.

Alterations to Post Office fittings, Leamington, Ont. Name of contractor, John Edward Burrows, Leamington, Ont. Date of contract, January 30, 1922. Amount of contract, \$850.

Repairs to Groins Nos. 1 and 3, Annie Bar, Fraser River, B.C. Name of contractor, Fraser River Pile Driving Company, Ltd. Date of contract, January 30, 1922. Amount of contract, unit prices.

Repairs to wharf, St. Michel de Bellechasse, Que. Name of contractor, J. R. Boulanger, Montmagny, Que. Date of contract, February 10, 1922. Amount of contract, unit prices.

Reconstruction of public wharf, North Bay, Ont. Name of contractor, Grant Brothers, Ottawa, Ont. Date of contract, February 23, 1922. Amount of contract: lump sum, \$3,636, and unit prices.

DEPARTMENT OF RAILWAYS AND CANALS.

Erection of a railway station, with dwelling, at Hervey Junction, county of Portneuf, Quebec, Canadian National Railways. Name of contractor, J. A. Boulay, Sayabec, county of Matane, Que. Date of contract, February 7, 1922. Amount of contract, \$9,995.

Erection of a railway station, with form, at Luceville, county of Rimouski, dwelling and raised machinery platform at Luceville, county of Rimouski, Que., Canadian National Railways. Name of contractor, Arthur L. Landry, St. Octave, county of Matane, Que. Date of contract, February 7, 1922. Amount of contract, \$8,225.

Erection of 10 double dwelling houses at Parent, county of Champlain, Que., Canadian National Railways. Name of contractor, Emery Sicard, Amos, county of Pontiac, Que. Date

of contract, February 7, 1922. Amount of contract, \$88,000.

Paving of portions of roadways at Deepwater Freight Shed and Halifax Ocean Terminal Station, Canadian National Railways. Name of contractor, T. C. Gorman and F. C. Peckham, Halifax, N.S. Date of contract, February 7, 1922. Amount of contract, schedule prices.

Erection of extension to ice house at Chaudiere Junction, county of Levis, Quebec, Canadian National Railways. Name of contractor, A. J. Morin, Garthby, county of Wolfe, Que. Date of contract, February 7, 1922. Amount of contract, \$3,750.

Construction of substructure of a single track railway bridge over the Coffee River at Mileage 41.1 of the Amos Subdivision, at or near Goulet, county of Pontiac, Quebec, Canadian National Railways. Name of contractor, Joseph Gosselin, Limitée, Quebec, Que. Date of contract, February 7, 1922. Amount of contract, 3,500 and schedule prices.

Construction of substructure of a single track railway bridge over the Little Buctouche River at Mileage 26.1 of the Buctouche Subdivision, at or near McKee's Mills, county of Kent, N.B., Canadian National Railways. Name of contractors, T. C. Gorman and F. C. Peckham, Halifax, N.S. Date of contract, February 7, 1922. Amount of contract, schedule prices.

Erection of a highway steel swing bridge over the Trent Canal, Hamlet, Ont. Name of contractors, Standard Steel Construction Company, Ltd. Date of contract, February 7, 1922. Amount of contract, \$15,686.

Erection of two highway steel swing bridges across the Welland Canal at the head of Locks 1 and 3. Name of contractors, Standard Steel Construction Company, Ltd. Date of contract, February 7, 1922. Amount of contract, \$17,910.

POST OFFICE DEPARTMENT.

The following is a statement of payments made in February for supplies ordered by the Post Office Department, subject to the Regulations for the Suppression of the Sweating System, the securing of fair wages, and the performance of work under sanitary conditions:

Nature of Orders	Amount of Orders
Making metal dating stamps and type, and other hand stamps and brass crown seals	\$1,096.99
Making and repairing rubber stamps, daters, etc.	277.06
Supplying mail bag fittings	9,011.93
Making up and supplying letter carriers' uniforms, etc.	7,411.27
Repairing letter boxes, etc.	18.45
Satchels	761.15

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES.

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Similar agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees, but verbal agreements are also included in the records, the latter being schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and

in effect though not signed. In each agreement the rates of wages for principal classes of labour are given, with other information of general interest.

Printing, Publishing, etc.

SASKATOON, SASK.—CERTAIN LOCAL FIRMS AND INTERNATIONAL TYPOGRAPHICAL UNION No. 663. Agreement effective from November 1, 1921, to October 31, 1923.

Only good standing members to be employed.

Wages: Per week—Newspaper offices—Day work (8 hours), November 1, 1921, to April 30, 1922, \$47; May 1, 1922, to October 31, 1922, \$45; November 1, 1922, to October 31, 1923, \$44. Night work (7½ hours), November 1, 1921, to April 30, 1922, \$50; May 1, 1922, to October 31, 1922, \$48; November 1, 1922, to October 31, 1923, \$47. Job offices—Day work. November 1, 1921, to April 30, 1922, \$43.08; May 1, 1922, to October 31, 1922, 41.25; November 1, 1922, to October 31, 1923, \$40.33; Night work, November 1, 1921, to April 30, 1922, \$45.82; May 1, 1922, to October 31, 1922, \$44; November 1, 1922, to October 31, 1923, \$43.08.

Hours of labour: Newspaper offices, 48 hours per week, 8 hours per day. Job offices, 44 hours per week—8 hours per day, 4 hours on Saturday.

Overtime—to commence when time is called—first three hours, time and one-half; thereafter, double time. A member when away from the building, called back either before or after his regular day's work, to receive one dollar extra for call-back and not less than one hour's pay at overtime rate in addition. Temporary employment of less than one full day to be paid for as a full day.

One apprentice to five journeymen or major fraction thereof, the limit to be two, and one extra where an apprentice is in his last six months. Apprentices to have reached the age of sixteen years, to be able to read manuscript and to have had common school education. No apprentice to be employed overtime except with a journeyman.

Wages, apprentices, from 33 1-3 per cent of journeyman's scale in 1st year to 80 per cent in 5th year.

A machinist's assistant to be paid and classed as an apprentice but not to interfere with allotment.

Terms of instruction for beginners on linotype and monotype machines, thirteen weeks' duration. Wages, Per week—first three weeks, \$22; next five weeks, \$28; last five weeks, \$35. Time may be shortened or lengthened according to speed attained by appren-

tice.. Learners of typesetting machines must be practical printers or apprentices in last six months.

Time lost during week in which holidays occur to be deducted from regular scale. Working on holidays, double time, morning papers excepted after 7 p. m. 5½ hours to constitute a night shift on night preceding a holiday. No work to be executed from an office in which a strike exists.

Disputes to be referred to a committee of three, one selected by each party and a third by these two, decision to be final and binding.

Transportation — Water.

HALIFAX, N.S. — CERTAIN STEAMSHIP COMPANIES, AND HALIFAX LONGSHOREMEN'S ASSOCIATION, No. 269. Agreement to be in effect from January 1, 1922, to June 30, 1922, and thereafter unless due notice be given.

Wages: Per hour, day work, 55 cents; night work, 65 cents. For full cargoes of cement, and handling bulk grain, day work, 65 cents, night work, 75 cents. For work on ships with cargo on fire, rate for men on board the ship, \$1.10 day work; \$1.30 night work—This rule to apply only to hatches affected by fire, smoke, steam or gas.

Sunday and holiday work, double time—except for ships with cargo on fire, rate per hour to men on board ship then being: day work, \$1.65; night work, \$1.95. Work during meal hours, double time. Work in summer season to be between 7 a.m. and 6 p.m., day work, and between 6 p.m. and 7 a.m., night work. Winter work, from November 1 to April 1, to start at 8 a.m. except for mail or passenger boats.

Waiting time, from 7 a.m. to midnight, full rate for first hour; successive hours, half rate. After midnight, full rate.

Work not carried on after midnight to cease at 11 p.m., except in case of a shunt of perishable cargo. Work after 6 p.m. on Saturday (necessity only), double time.

For work on wrecked or stranded vessels (not outside the harbour) — wages of port to be paid from time men leave the pier until they return.

Non-union men employed on account of shortage of union labour not to be replaced during the day they were hired.

In event of minor disputes, business agent to have power to confer with employer, decision to be binding.

Union to do all possible to prevent irregularity of attendance at work and insure a sufficient supply of men.

ST. JOHN, N.B.—CERTAIN STEAMSHIP COMPANIES, AND INTERNATIONAL LONG-SHOREMEN'S ASSOCIATION No. 272, SCOWMEN AND LUMBERHANDLERS OF ST. JOHN AND VICINITY. Agreement to be in effect from December 7, 1921, to May 1, 1922.

Wages: Per hour—50 cents.

Hours per day, nine. Sundays and holidays, double time. No work on Labour Day. Double time for overtime after 5 p.m., and after noon on Saturdays during June to September, except for men culling, stamping or handling for surveyors alongside of ships. Waiting to be paid full time. Double time for work during meal hours.

Number of men in a gang to be decided by foreman, and not to be reduced during the day.

Transportation—Electric Railways.

QUEBEC, QUE. — QUEBEC RAILWAY LIGHT AND POWER CO., MONTMORENCY DIVISION, AND SHOPMEN. Amended schedule of wages and working conditions effective from November 1, 1921, with 60 days' notice of revision from either party.

Hours of labour, 9 per day, between limits as fixed in schedule. Overtime up to 10 hours work, *pro rata*. Over 10 hours a day, overtime rates. Men required to work two successive shifts to be paid overtime after 10 hours.

When men are ordered to do a complete day's work at a different workshop from the one where they are usual-

ly employed, their board or travelling time will not be paid; but if they are ordered to work in another shop or on the road after commencing the day's work, travelling time will be allowed. Reasonable allowance will be made for board if notice was not given in time to permit bringing lunch.

Wages: Per hour—machinists, blacksmiths, boiler makers, car and loco painters (letterer), 57 cents; car and loco painters, carpenters (loco, car and bench), 52½ cents; car repairers, car inspectors, pipe fitters, 48 cents; all helpers, 44 cents; apprentices, 31 cents; electricians, 48 and 57 cents; pit hand and oilers, 44 cents. Overtime, time and one-half.

PRICES, RETAIL AND WHOLESALE, IN CANADA, FEBRUARY, 1922.

THE movement in prices was marked by a recovery in wholesale prices and a continuance of the decline in retail prices of food, but in both cases the changes were slight, the decline in retail prices being chiefly in eggs and dairy products, while the advance in wholesale prices was almost entirely due to the recovery in the prices of grains and livestock from the low levels experienced during recent months.

In retail prices, the average cost of a

family budget of 29 staple foods in some 60 cities in Canada at the beginning of February was \$10.60 as compared with \$11.03 in January, \$14.08 in February, 1921, \$15.77 in February, 1920, \$13.41 in February, 1919, \$12.54 in February 1918, \$10.46 in February, 1917, \$9.40 in February, 1916, \$7.99 in February, 1915, and \$7.75 in February, 1914. The total for food, fuel, and rent in the sixty cities was \$21.06 in February as compared with \$21.52 in Jan-

uary, \$24.85 in February, 1912, \$24.71 in February, 1920, \$21.34 in February, 1919, \$19.80 in February, 1918, \$16.78 in February, 1917, \$14.27 in February, 1916, \$14.15 in February, 1915, and \$14.54 in February, 1914. The chief changes for the last month were in eggs and butter, with slight decreases in nearly all the other items except meats which showed slight advances.

In wholesale prices the index number was slightly higher, reaching 229.5 for February as compared with 227.7 for January, 270.1 for February, 1921, 343.5 for February, 1920, 279.8 for February, 1919, 263.5 for February, 1918, 219.9 for February, 1917, 175.9 for February, 1916, 142.5 for February, 1915, and 136.6 for February, 1914.

A special index number of 50 commodities, including 20 foods, 15 raw materials and 15 manufactured articles, based upon prices in 1913 as equal to 100, was up to 148.4 for February as compared with 148.0 for January, 150.1 for December, 1921, 147.2 for November, 1921, 182.2 for February, 1921, and 148.4 in November, 1916.

Other index numbers of wholesale prices in Canada showed slight advances for February. That calculated by Professor Michell, based on prices in 1900-1910 as equal to 100, rose to 158.9 as compared with 158.4 for January, 161.9 for December, 160.0 for November, 197.8 for February, 1921. The index number of the Canadian Bank of Commerce for 24 commodities mainly exported was up from 147.17 for January 15, to 150.43 for February 15, while that for 24 commodities mainly imported was down from 147.88 for January 15 to 145.65 for February 15. The rise in prices of exports was in wheat, hogs, wool, wood pulp, and bituminous coal, while the markets for coarse grains and livestock were steady, and dairy products were down. The decreases in prices for imports were in cotton, rubber, iron, and anthracite coal. The index numbers of the Bank of Commerce are based upon average prices in 1909 to 1913 as equal to 100.

The table of retail prices and rentals shows the prices at the beginning of February of over one hundred staple foodstuff and groceries, of coal, wood and coal oil, and the rent for sixroomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these have been published each month since the beginning of 1910, the figures being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers who did a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915, when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts chiefly occupied by workingmen. The first class is of houses in good condition, favourably located in such districts, with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the difference in quality. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income. While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the

Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc.; so that the comparative expenditure would be little changed.

The index number of wholesale prices is based on the quotations for 271 commodities and is the simple average of the percentages of current prices of the several commodities in relation to the average prices for the base period, 1890-1899, these being therefore made equal to 100. The quotations for most farm products are obtained weekly and averaged for the month; the quotations for other commodities are taken for the middle of the month. The table of index numbers shows the changes by groups and sub-groups for the previous month and for the corresponding months back to 1913.

Retail Prices

In meats there were slight increases amounting to $\frac{1}{2}$ c per pound in beef and about 1c in fresh pork. Salt pork, bacon and lard, however, were lower. Eggs averaged between 10c and 15c per dozen lower. Milk showed a slight decrease, averaging 13c per quart as compared with 13.3 in January and 15.5c in January, 1921. Butter, creamery prints, averaged 44.7c per pound as compared with 48.6 in January and 63.6 in January last year. Bread was unchanged at 7c per pound as compared with 8.18c in January, 1921. Potatoes showed little change, averaging \$1.60 per bag as compared with \$2.27 in January, 1921. Onions averaged 9.8c per pound as compared with 8.1c in January and 5c in January, 1921. Strawberry jam averaged \$1.05 per four-pound tin as compared with \$1.07 $\frac{1}{2}$ in January and \$1.47 in January, 1921. Sugar was slightly lower at 8.8c per pound as compared with

(Concluded on page 254)

(*) Preliminary figures dropped in 1915. (**) Nine commodities off the market, fruits, vegetables, etc. One line of spelter was

9.2c in January and 12.8c in January, 1921. Anthracite coal averaged \$17.44 as compared with \$17.54 in January and \$20.00 in January, 1921. Hard wood averaged \$12.73 per cord as compared with \$12.83 in January and \$14.49 in January, 1921. Coal oil averaged 31.7c per gallon as compared with 10.3 in January last year. Rents showed slight increases in the average.

Wholesale Prices

GRAINS AND FODDER.—Wheat, Manitoba Northern, at Winnipeg continued to advance, being up from \$1.19 per bushel at the end of January to \$1.47 at the end of February. Ontario winter wheat similarly advanced from \$1.00 per bushel to \$1.25-1.50 at Toronto. Barley at Winnipeg rose from 56c per bushel to 67c. Oats at Winnipeg advanced from 45c per bushel to 52c and at Toronto from 35c to 45c. Corn advanced at Toronto from 68c to 76c. Flaxseed at Winnipeg was up from \$1.94 to \$2.43 per bushel. Peas advanced from \$1.25 per bushel to \$1.80. Hay rose from \$28.00 per ton to \$29.00. Bran and shorts were higher.

ANIMALS AND MEATS.—Western cattle had risen to \$7.00 per hundred pounds at Winnipeg in January but fell off to \$6.50 in February. Cattle at Toronto were steady at the high prices reached at the end of January at \$7.50 per hundred pounds for choice butchers. Hogs rose to \$11.75 per hundred pounds at the end of January, but advanced to \$13.25 in February, falling in the last week 50c. Dressed hogs advanced from 15c per pound to 19c. Bacon, breakfast, at Montreal, rose from 25c per pound to 27c. Hams rose from 25c to 29c per pound. Barrelled pork rose from \$31.00 per barrel to \$33.00, and lard was up from 14c per pound to 17c. Sheep rose from \$6.00 per hundred pounds to \$8.00.

DAIRY PRODUCTS.—Butter advanced at Montreal from 34c per pound to 37c. Cheese rose from 17½c per pound to 18½c but fell back to 18c. Eggs were down at Montreal from 50c per dozen to 40c.

FISH.—Salt herrings declined from 3c per pound to 2½c. The markets for

dried fish in the West Indies were reported to be showing improvement, but the market for salt fish was weak.

FRUITS AND VEGETABLES.—Winter apples were higher, Northern Spies rising from \$9.00 per barrel to \$12.00 and Baldwins from \$7.50 to \$8.00. Lemons were up from \$4.50 per box to \$6.50, and oranges were up from \$5.75 per case to \$6.50. Currants were slightly cheaper, but prunes were slightly dearer. Potatoes were steady. Beans advanced from \$3.50 per bushel to \$4.20. Onions advanced from \$6.00 per hundred to \$9.00.

MISCELLANEOUS FOODS.—Flour advanced \$1.00 per barrel, reaching \$8.70 at Toronto in small lots for spring wheat patents. Winter wheat flour advanced 25c per barrel. Sugar was steady. Molasses declined slightly lower. Glucose advanced.

TEXTILES.—In woollen and cotton goods there were practically no changes. Raw silk was down \$1.00 per pound. Jute and hessians fell 5 per cent. Flax fibre fell from 25c per pound to 24c.

HIDES, LEATHER, BOOTS AND SHOES.—Upper leather declined from 33c per pound to 31c.

MEATS AND IMPLEMENTS.—A line of pig iron fell from \$21.00 per ton to \$29.00. Iron bar, galvanized sheets, steel bar, and cast steel were lower. Quicksilver and tin declined. Axes were down \$5.00 per dozen and coil chain \$2.50 per hundred. Grindstones fell 50c per hundred.

FUEL AND LIGHTING.—Bituminous coal at Montreal was down from \$8.50 per ton to \$7.50.

BUILDING MATERIALS.—Red lead fell \$1.00 per hundred. Sash cord and copper wire were lower. Linseed oil was up from 80c per gallon to \$1.00 and turpentine from \$1.30 to \$1.40.

HOUSE FURNISHINGS.—Sad irons were down from \$1.90 per dozen to \$1.81.

DRUGS AND CHEMICALS.—Alum and copperas were slightly higher but bleaching powder declined.

MISCELLANEOUS.—In raw furs, racoon skins advanced. Malt fell from \$1.10 per bushel to \$1.03. Crude rubber was down from 20c to 17c per pound.

PRICES IN THE UNITED KINGDOM AND IN OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movement of prices in other countries as compared with Canada.

The index numbers of retail prices which are listed are from official sources unless otherwise stated. The authorities for the wholesale price index numbers are named in all cases.

United Kingdom

WHOLESALE PRICES

The Board of Trade index number of average prices for January (taking prices for 1913 as 100) was 167.2 as compared with 171.3 in December, a decline of 2.4 per cent on the 150 items. The three food groups show an aggregate reduction of 3.2 per cent in the month and the five groups of industrial materials a reduction of 2 per cent. Of the 150 items no change of price during the month under review is recorded for 30, increases for 30, and decreases for 90. The only group showing an increase is "Other Textiles."

The *Times* index number of wholesale prices of 60 commodities was 155.9 at the end of February as compared with 158.6 at the end of January, (taking average prices for 1913 as 100) which shows a decrease of 1.7 per cent, as against a decline of 2.2 per cent in January. Foodstuffs declined 1.8 per cent, and industrial materials 1.7 per cent.

The *Statist* (Sauerbeck's) index number of wholesale prices for the end of December, showed a decline of 2.3 per cent from the level at the end of November. During January there was a continued decline amounting to less than one per cent. The general index number for the end of January was 132.5, the lowest since July, 1916. During January foodstuffs rose by 1.1 per cent and materials fell by 2.1 per cent. The rise in foodstuffs was occasioned by the in-

crease in price of animal foods due to the spread of foot and mouth disease.

The *Economist* index number for the end of January showed a further decline of 1.6 per cent from the figure for the end of December. This is the lowest point recorded since the middle of the year 1916. The only group showing an increase is "Other Food," this being due to the high level of sugar and tobacco.

COST OF LIVING

At the beginning of February the official index number of retail prices for foods comprised in the food budget was about 79 per cent above the level of July, 1919. As compared with the previous month there was a decline of about 3.2 per cent. The chief reductions during January were in the prices of eggs, butter, flour, bread and margarine. The average prices of mutton and potatoes showed a slight advance. At the beginning of March the food budget showed a still further decline, and stood at 77 per cent above the figure for July, 1914, a decrease of about 1.1 per cent. The index numbers for other items are: rent, 155; clothing, 245; fuel and light, 220; sundries, 195; all items, 186; as compared with 155, 250, 220, 195 and 188 respectively a month earlier.

France

WHOLESALE PRICES

The official index number of wholesale prices for January, basis, 1901-1910 = 100, shows a decrease of 3.7 per cent from the December level. The decline is general throughout all groups, the three food groups declining nearly 3.5 per cent, and the three industrial groups about 3.9 per cent.

Belgium

COST OF LIVING

The unweighted index number for 56 articles in 59 localities has for base "prices in April, 1914 = 100." The

From January, 1913, up to and including December, 1920, only 22 articles of food included. (t) Massachusetts Special Commission on Necessaries of Life.

index was at its highest point for 1921 in January, when it stood at 450. It declined until July, when it had gone down 15.8 per cent. Since then it has risen slowly, but the December number is 393, a decline of one point or $\frac{1}{4}$ per cent from the November level. The index number for Brussels showed the same general tendencies during the year as that for the Kingdom. It stood at the same level for December as for November—417.

Denmark

COST OF LIVING

The index number of cost of living in Denmark, taking July, 1914 as 100, was 212 in January, 1922. This was a

drop of $10\frac{1}{2}$ per cent from the level in July, 1921. The principal decreases were fuel and light, 17 per cent; food, 16 per cent; clothing, 9 per cent. Sundries showed a drop of 4 per cent, and housing and taxes remained stationary.

Switzerland

COST OF LIVING

The index number of cost of living issued by the Union of Swiss Co-operative Stores shows a decline at February 1 of 5.3 per cent from the level at January 1. The two important changes are sudden and marked declines in milk and its products, and in sugar. The principal decreases are: sugar, 25 per cent; cooking butter, 14 per cent;

table butter, 12 per cent; petroleum, 11 per cent; milk and cheese, 10 per cent. 22 other articles declined less than 10 per cent; 13 showed no change; and 6 articles showed rises up to 5 per cent, including lentils, India rice, wine, mutton, and potatoes retail and semi-wholesale.

United States

WHOLESALE PRICES

The preliminary index number calculated by the Bureau of Labour Statistics of the United States stands one point lower in January than in the previous month, which is a decrease of .7 per

cent. Farm products show a gain of $2\frac{3}{4}$ per cent, and in all other groups slight decreases are recorded.

The index number of wholesale prices in the United States compiled by the Federal Reserve Board showed that prices in January did not vary from the level in December. On the basis prices in 1913 = 100, commodities imported and those exported declined one point; goods produced and raw materials increased one point; and manufactured goods declined slightly.

Bradstreet's general index number for March 1, was \$11.6001, an increase of nearly 1.6 per cent over that for February 1. This is the eighth gain in nine

*For South Africa, Australia and New Zealand base is taken as 1000 instead of 100. a Average for year. b Quarter beginning in specified month. c 230 commodities, 1890-1909; 272, 1910-1914; 271, 1915-1922. d New index number is joined to old index number (38 commodities) and all converted to base 1913=100. e The commodities comprised in these two new index numbers are in the one case articles chiefly exported; in the other case, articles chiefly imported. f First of month. g Middle of month. h End of month. j Monthly average.

months, since prices began to be stabilized. By groups, increases were shown in breadstuffs, live animals, provisions and groceries, textiles, vegetable oils and chemicals and drugs, while declines were shown in hides and leather, metals, coal and coke, naval stores, building materials and miscellaneous products. Fruit groups remained unchanged.

Dun's general index number for March 1, was \$169.721, a gain of nearly 2.9 per cent from the level of February 1. Of the last eight months, five have shown a rising tendency, and the level is now 40.6 per cent above what it was before the war. The chief advances for

the month under review were in breadstuffs, 16.1 per cent, and in meats, 12.0 per cent.

Gibson's average index number of prices for 22 articles of food for February (monthly average) was 70.2, an increase of 9.2 per cent from the previous month, and a higher level than has been reached any month since August, in which the index number was 72.4.

The *Annalist* index number of prices of a food budget of twenty-five foods, taking the average of 1890-99 as 100, was 164.311 on January 21, and 173.157 on February 18. Since then there have

been increases each week, the index reaching 182.682 on March 11.

COST OF LIVING

The index number of retail prices of 43 foods in 51 cities, published by the United States Bureau of Labour Statistics, shows a decrease of 5 per cent in January as compared with December. During the month from December 15, 1921 to January 15, 1922, 26 of the articles decreased in price, the chief decreases being: strictly fresh eggs, 29 per cent; storage eggs, 20 per cent;

butter, 13 per cent; corn flakes, 10 per cent. The prices of 10 articles increased in price, the chief increases being: onions, 14 per cent, and cabbage, 10 per cent.

The cost of living index number for Massachusetts for the month of February was 156.8, the average for 1913 being taken as 100. This is a drop of .3 per cent from the previous month. Slight decreases were shown in food, clothing and sundries, while shelter and fuel remained the same.

FATAL INDUSTRIAL ACCIDENTS IN CANADA IN 1921.

THE present article contains tables with respect to fatal industrial accidents that occurred in Canada in 1921. While an effort has been made to have the record as complete as possible it should be understood that it does not necessarily include all the industrial accidents that may have occurred during the year. During the year reports of industrial fatalities have been received by the Department from a number of sources, among which may be mentioned the following: For Canada, the Board of Railway Commissioners; for Nova Scotia, the Workmen's Compensation Board, and the Department of Public Works and Mines; for New Brunswick, the Workmen's Compensation Board; for Quebec, the Department of Public Works and Labour, and the Bureau of Mines; for Ontario, the Factory Inspector, the Workmen's Compensation Board, the Ontario Railway and Municipal Board, the Algoma Central and Hudson Bay Railway, the Algoma Steel Corporation, Limited, and the Lake Superior Paper Company; for Manitoba, the Bureau of Labour, and the Workmen's Compensation Board; for Saskatchewan, the Bureau of Labour; for Alberta, the Workmen's Com-

pensation Board; and for British Columbia, the Department of Mines, and the Workmen's Compensation Board.

According to the record, 908 deaths were due to industrial accidents in 1921 as compared with 1,192 in 1920. The steam railway service group had the highest number of fatalities amounting to 17.4 per cent of the total, there being 158 deaths, 99 of which were due to being struck by, run over or crushed by or between cars and engines. In the building and construction industries 147 deaths were reported; in the lumbering industry, 128; and in the mines, smelters and quarries, 109. The distribution according to provinces showed Ontario with the highest record, or 408 fatalities, 93 of which occurred in the building and construction industries, 74 in the steam railway service, 53 in lumbering and 35 in the metal, machinery and conveyance industries. In British Columbia the fatalities numbered 165, with 53 in lumbering, 25 in the steam railway service, and 24 in the mines, smelters and quarries. In Nova Scotia 33 of the 62 accidents reported occurred in the mines, smelters and quarries. In the industries as a whole 208 fatalities were due to mov-

ing trains, vehicles, etc., and 156 to "falling objects," 125 to falls of persons and 115 to dangerous substances; 52 accidents were due to electric currents, 37 to explosive substances, 19 to mine and quarry cars, and 13 occurred as a result of infection. Fuller particulars regarding the causes will be found in the quarterly statements published in the issues of the LABOUR GAZETTE for May, August and November

1921, and February, 1922. An analysis of the monthly distribution shows the highest number of fatalities in July and in the quarter comprising the months of July, August and September.

In the accompanying tables are enumerated the industrial fatalities that occurred during 1921, by months, by industrial groups, by causes and by provinces, in comparison with the revised statistics for 1920.

RECENT LEGAL DECISIONS AFFECTING LABOUR.

THE two legal decisions which are summarized below relate to a case of workmen's compensation in Manitoba, and employer's liability in Saskatchewan. On page 314 in this issue there is given the text of a recent decision delivered at Toronto relating to an injunction against picketing at Windsor, Ont.

Widow of railway employee killed on duty cannot bring action against employer in Manitoba.

In the LABOUR GAZETTE for May, 1920, a summary is given of a case arising out of an action for damages brought by a widow in Manitoba on account of the death of her husband in a wreck when working on a railway. It was alleged that the accident was due to the loading of a car in such a way that it could not pass under a bridge, which was in violation of an order of the Board of Railway Commissioners. After the commencement of the action, the Company notified the plaintiff that an application would be made to the Workmen's Compensation Board of Manitoba to determine whether the right of action which she had taken was one that was taken away by the Act. The plaintiff then sought an injunction to restrain the defendant company from so applying to the Board. This injunction was granted on the ground that the provision of the Dominion Railway Act, which rendered any employer liable for the full amount of damages to any person injured through violation of any orders or rules made under the Act, could not be overridden by any Act of the local legislature. The injunction,

however, was dissolved in the Court of Appeal on the ground that it was premature. The company then made application to the Workmen's Compensation Board, which made an order declaring that "the accident sustained by the said William McColl deceased is one with respect to which the dependents of the said deceased have a right to compensation under Part One of The Workmen's Compensation Act," and that "this matter is one in which the right to bring action for or by reason of such accident is taken away by Part One of The Workmen's Compensation Act."

The plaintiff then brought the case before the Court of King's Bench. The causes of action set forth on behalf of the plaintiff were (1) at Common Law, (2) under the Manitoba Act respecting Compensation to Families of Persons killed by Accident, and (3) under the Railway Act of Canada. The claim under Common Law, however, was not urged. The defendant company contended that the plaintiff's right of action under the first of the two above acts had been taken away by the Workmen's Compensation Act. This view was sustained by the Court, which quoted Section 13 (2) of the Act creating the Board as follows: "Any party to an action may apply to the Board for adjudication and determination of the question of the plaintiff's right to compensation under this Part and as to whether the action is one the right to bring which is taken away by this Part, and such adjudication and determination shall be final and conclusive."

Section 13 (1) states that the rights which are so taken away are all "rights of action. . . to which a workman or his dependants are or may be entitled against the employer of such person for or by reason of any accident which happens to him while in the employment of such employer." Section 61 (4) provides that "where an action in respect of an injury is brought against an employer by a workman or a dependant," then upon the Board's order being made "the action shall be forever stayed."

With respect to the Railway Act—section 385, upon which the plaintiff relied, was in part as follows: "Any company which . . . does, causes or permits to be done any . . . thing contrary to the provisions of this . . . Act, or to the orders . . . of the Governor in Council, or of the Minister or of the Board . . . shall be liable to any person injured by any act or omission for the full amount of damages sustained thereby." The Court held that the words "Any person injured" meant any person having received an injury of such a nature that it is actionable."

In the opinion of the Court an injury which results from the death of a person is not actionable at common law. Hence any injury sustained by the plaintiff through the death of her husband was not actionable. While according to the Interpretation Act "person" includes heirs, administrators, or other legal representatives of such person, it was interpreted to mean only those who are heirs, etc. of such person with respect to the subject matter dealt with in the particular enactment where the said word (person) occurs. As the deceased workman never had such right

of action as was claimed by his widow, there was never anything in this respect to be inherited by his widow as heir nor administered by her as administratrix, as being part of the estate.

It was therefore the opinion of the Court that the plaintiff did not have any right of action either at common law or under The Railway Act; and her only right of action, which would have been under the Act respecting compensation of Families of Persons killed by Accident, was taken away by the order of the Workmen's Compensation Board. By judgment of the Court the action instituted by the plaintiff was permanently stayed.

(Manitoba — McColl vs Canadian Pacific Railway Company.)

Damages awarded by jury for accident to workman confirmed on appeal.

A labourer in Saskatchewan lost four fingers of his right hand in an accident caused by an elevator. He brought an action against the company employing him on the charge of negligence, and was awarded \$5,000 damages by a jury. The employers appealed against this decision, and the case was heard in the Court of Appeal of Saskatchewan. From the account of the action given in the judgment of the Appeal Court it appears that the plaintiff, who was a labourer with no knowledge of elevators, was called by an engineer of the company to help him in adjusting an elevator, the compensating weight of which had become caught in a groove. In accordance with the instructions of the engineer he stood beside the drum and held the cable to which the weight was attached in order to prevent it slipping out of the groove, the cable having become slack when the weight

stuck. In order to steady himself he placed his right hand on the drum. The engineer then went down the shaft and kicked the weight, which dropped several inches. This caused the cable to tighten and in doing so it descended upon the labourer's right hand with such force that it severed all four fingers. The engineer admitted that he had not explained the exact nature of the work and had given no warning of the possible danger involved.

In the trial Court, the jury found the company guilty of negligence in failing to take the proper method of putting the elevator in working order. In answering further questions of the judge the jury declared that the company was negligent in not blocking up the weight and taking up the slack on the cable and releasing the weight gradually; also in not guarding the drum and cable, and in not warning the plaintiff of the danger in the operation he was called upon to perform.

The company appealed on the grounds that the trial judge erred in submitting the further questions to the jury and in

not proceeding to deal with the case upon the basis of the answers to the questions originally submitted. It was also claimed that the jury erred in going outside the record and finding negligence which was not alleged by the workman.

The Court of Appeal declared that the contentions of the appellant company were unfounded, that the trial judge took the right course in submitting further questions to the jury, as their original answer with regard to negligence was not clear; and that the evidence at the trial sufficiently covered the negligence found by the jury. With regard to the amount of damages awarded, the Court declared that an award of \$5,000 for the loss of four fingers of the right hand did not appear so excessive that twelve reasonable men could not have granted it.

The verdict was therefore allowed to stand and the appeal was dismissed with costs.

(Saskatchewan—Patterson vs Saskatchewan Creamery Company, Limited.)

THE LABOUR GAZETTE

Prepared and edited in the Department of Labour, Ottawa

APRIL, 1922.

Number 4

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

The month
in brief

In addition to the regular monthly articles respecting industrial conditions, disputes, strikes, wage agreements, etc., this issue contains short articles on the Disablement Commission of the International Labour Office, recent labour legislation in Quebec and in Great Britain, minimum wages for female telephone operators in Ontario, and summaries of various Dominion and provincial annual and statistical reports.

At the beginning of March the percentage of unemployment among the members of trade unions stood at 10.6 as compared with 13.9 at the beginning of February and with 16.1 at the beginning of March 1921. Considerable short time was again indicated by many of the unions making returns. According to reports received from over 6,000 employers, employment declined during March as compared with the preceding month, partly on account of seasonal contractions, supplemented by temporary shutdowns. The situation continued to compare unfavourably with that indicated by the employers making returns for the corresponding months of last year.

The average cost of the weekly family budget of 29 staple foods in some 60 cities was down to \$10.54 at the beginning of March as compared with \$10.61 for February; \$13.23 for March last year; \$15.98 for March, 1920; and \$7.68

for March, 1914. Including the cost of fuel and rent with that of food the figures averaged \$20.96 at the beginning of March as compared with \$21.07 for February; \$23.87 for March last year; \$25.01 for March, 1920; and \$14.39 for March, 1914. In wholesale prices the index number fell to 225.6 for March as compared with 229.5 for February; 263.1 for March last year; 349.0 for March, 1920; and 137.0 for March, 1914.

The time loss due to industrial disputes during March was less than during February but greater than during March, 1921. There were in existence during the month 19 strikes, involving about 2,309 workpeople with an estimated time loss of 58,943 working days. Only one of these strikes was reported as having commenced during March. Two of the strikes commencing prior to March terminated during the month, leaving 17 strikes involving about 2,159 workpeople on record at the end of the month.

Proceedings
under the
Industrial
Disputes
Investigation
Act

During the month of March the Department received reports from two Boards of Conciliation and Investigation established to deal with disputes between (1) the Dominion Power and Transmission Company, Hamilton, and certain of its employees, being linemen, groundmen,

etc., members of the Canadian Electrical Trades Union, and (2) the Dominion Power and Transmission Company and the Hamilton Street Railway Company, respectively, and various classes of employees, members of Local 700, International Union of Steam and Operating Engineers, and Divisions 107 and 876, Amalgamated Association of Street and Electric Railway Employees of America.

Three applications were received for the establishment of Boards.

Jottings **Boards of Trade,**
Chambers of Commerce,
and Industrial Commissioners throughout the Dominion are invited to forward to Mr. L. D. Wilgress, Canadian Government Trade Commissioner, 73 Basinghall Street, London, E.C. 2, publications, statistics, and other specific information regarding the industrial openings in the localities in which they are interested, particularly that dealing with transportation facilities, raw materials, labour, power costs, etc. Mr. Wilgress is in charge of the activities of the Department of Trade and Commerce which have been undertaken with a view to encouraging the establishment of British branch industries in Canada, in which the co-operation of all interested is invited.

A summary report of the Dominion Bureau of Statistics on statistics of railways with annual operating revenues of \$500,000 or over, for the calendar year 1921, gives the ratio of payroll to operating revenue as 53.4 per cent in 1921, as compared with 59.5 per cent in 1920; and the ratio payroll to operating expenses as 58.0 per cent in 1921 and 61.2 per cent in 1920. In 1921 the total amount of payroll was \$239,851,718, and in 1920 it was \$287,843,361. These statistics cover over 95 per cent of the total railway mileage in Canada.

A deputation representing the lately formed Electrical Contractors' and Dealers' Association, Inc., recently

waited on the Minister of Labour of Quebec, to request that the Provincial Act passed last year providing for the inspection of electrical wiring, be put into force without delay. It was claimed that property was frequently destroyed through faulty wiring, which could be avoided if effect were given to the last year's act, which provides that wiring should only be done by licensed electricians.

A deputation from the Independent Labour Party waited on the Winnipeg School Board on March 15 to ask that in view of the prevalence of unemployment the age of compulsory school attendance be raised from 14 to 15 years.

Replying to a delegation of housekeepers an official of the Winnipeg School Board explained the practice in regard to the refunding of fees to pupils taking domestic courses in the night schools. Pupils who were engaged in dressmaking and millinery for a living had their fees returned, he said, provided they attended the required number of classes, but women who took these courses for private use got no refund. Cases of unjust discrimination would be investigated if brought to the attention of the Board.

A fellowship of the value of five hundred dollars per annum has been donated for a limited term by the Imperial Oil Company, which will be open to graduates of universities in eastern Canada who wish to pursue post-graduate work at the University of Toronto.

At the opening of the Prince Edward Island Legislature on March 14 the Speech from the Throne stated that the payment of better salaries to teachers during the past year had enabled the public schools to secure properly qualified instructors; teachers' courses of training had been extended; and the attendance at the Agricultural School had doubled.

The National Association of Marine Engineers of Canada was granted a charter on March 1 by the Trades and

Labour Congress of Canada. By arrangements made with the American Federation of Labour the newly chartered Association will be officially recognized as having sole jurisdiction over this class of workers in Canada.

Application has been made to the Dominion Parliament for an act to incorporate the "Frontier University" with power to hold property for the purpose of "frontier education", and to confer degrees in all faculties. An account of the activities of the Frontier College among bodies of men whose work lies beyond the settled districts was given in the issue of the LABOUR GAZETTE for October, 1921, on page 1289.

An international association of English-speaking actors has been formed by the actors' organizations of America, Great Britain and Australasia, to be joined later, it is said, by that of South Africa. No international governing body has been established, but the national executives propose to work in co-operation in affording international protection to their members.

A Dairy Guild Committee, consisting of members of the National Amalgamated Workers' Union, has been set up for the purpose of organizing a guild for the dairy industry in London, England.

A recent press dispatch states that Premier Hughes of Australia "has come to the conclusion that the Australian Federal Arbitration Court is unsatisfactory." It is stated that he now advocates tribunals composed equally of employers and employees with an independent chairman to adjudicate disputes.

The results of a preliminary survey of the extent and seriousness of industrial carbon-monoxide poisoning in eleven industries in the United States have recently been summarized in Bulletin No. 291 of the United States Bureau of Labour Statistics. A report of investigations of the United States Bureau of Mines (Serial No. 2304) on the treatment of carbon-monoxide poison-

ing states that carbon-monoxide gas is one of the most widely distributed and frequent causes of industrial accidents, since being without colour, odor or taste its presence is not easily detected.

Governing Body Inter- national Labour Office

On the retirement of Senator Robertson from the office of Minister of Labour, his successor, the Honourable James Murdock, was appointed representative of the Government of Canada on the Governing Body of the International Labour Office (League of Nations). As the minister was unable to attend the Eleventh Session of this Body which was to be held at Geneva on January 17, 18 and 19, Colonel David Carnegie of London, England, who is a prominent industrial arbitrator, was appointed as his substitute. Colonel Carnegie was subsequently appointed to represent Canada at the Twelfth Session of the Governing Body which met at Rome on April 4. He is also the Canadian delegate on the Temporary Mixed Commission of the League of Nations for the Reduction of Armaments and an honorary correspondent of the Canadian Department of Labour in London. Colonel Carnegie was formerly resident in Canada and has made a close study of industrial and labour problems.

International Labour Office and Persian labour Conditions

Having received information that very young children were being admitted to industrial employment in certain carpet factories in Persia, especially in the Kirman district, and that women and children were compelled to work long hours for small wages and under extremely unsanitary conditions, where the uncomfortable position they were obliged to assume in making carpets resulted in atrophy of the arms and legs and other disorders, the International Labour Office sent a protest to the Persian Minister for Foreign Affairs through the first Per-

sian delegate to the second Assembly of the League of Nations. On December 9, 1921, the Persian Minister in Switzerland forwarded to the International Labour Office a copy of a telegram from the Persian Minister of Foreign Affairs, in which it was stated that pending definite measures the Kirman local authorities had been requested to enforce the following articles :

1. Engagement of workers to be effected with complete liberty on both sides.
2. Eight-hour day.
3. Prohibition of employment of boys and girls under age of ten years.
4. Permission for workers to leave factory at midday for rest.
5. Provision of healthy sites and pure air for factories. Preparation by local authorities of comfortable and suitable seats for women and children to allow work in normal positions, etc.

The telegram also stated that the authorities were requested to regulate wages and welfare of workers. It has since been reported that a committee has been instituted at Kirman, in conformity with the government proposals, for the purpose of concluding an agreement with employers in the carpet-making industry for the adoption of regulations for the wellbeing of workers in the industry. The regulations are based on the following principles :

- (1) Complete liberty and equality of rights on both sides in regard to the conclusion of labour agreements.
- (2) Registration of labour agreements.
- (3) Introduction of the compulsory 8-hour day; piece workers to be left free in this respect.
- (4) Provisional increase of 5 per cent in wages.
- (5) Weekly rest and holidays on festivals to be compulsory.
- (6) Employers guilty of violating these regulations to be held responsible.

Labour and the
Court of
International
Justice

The Permanent Court of International Justice, provided for in the Treaty of Versailles, was inaugurated at The

Hague on February 15, 1922, in conformity with the constitution approved

at the First Assembly of the League of Nations on December 13, 1920, and subsequently ratified by forty-five states, members of the League of Nations. It consists of fifteen judges and four deputy judges elected by the Assembly and by the Council of the League of Nations. It is probable that questions affecting labour will be the first to be submitted to the Court at its first ordinary session which will begin on June 15, next. One of these questions relates to the competence of the International Labour Conference and of the International Labour Organization in agricultural matters. The Court will also be called upon, in accordance with a resolution of the Third International Labour Conference, to interpret Article 389 of the Peace Treaty, concerning the representation of employers and workers at International Labour Conferences. It will have to determine the meaning of this Article, which states that the Members, i. e. the Governments, "undertake to nominate non-government delegates and advisers chosen in agreement with the industrial organizations most representative of employers or workpeople, as the case may be."

In addition to the plenary sittings of the Court, there will be a Labour Bench consisting of five judges, appointed for three years, who will be assisted in every case by four technical assessors without the right to vote, and chosen with a view to ensuring a just representation of the competing interests. These technical assessors will be chosen in each particular case, from a panel of "Assessors for Labour Cases" composed of two persons nominated by each member of the League of Nations and an equivalent number nominated by the Governing Body of the International Labour Office. Those nominated by the Governing Body must be on the panel from which members of the Commission of Inquiry are drawn, which was referred to in Article 412 of the Treaty of Versailles. One-half of the nominees of the Governing Body are to

be representatives of the workers and one-half representatives of the employers.

In labour cases the International Labour Office is authorized to furnish the Court with all necessary information, and for this purpose the Director of the Office will receive copies of all written proceedings.

Catholic Workers' delegation to Dominion Government

During the past month a delegation from the Confederation of Catholic Workers of Canada was received by the Minister of Labour and other members of the Dominion Government. Action by the Government was requested on the lines of the resolutions passed at the convention of this organization held last September in Hull, Quebec. These resolutions proposed: (1) Recognition by the Government of the right of the Confederation to be represented upon committees, commissions and conferences which the Government appoints, patronizes or convenes, and upon which it deems it advisable to give representation to organized labour of Canada; (2) Printing in the two official languages of Canada the paper money and stamps issued by the Canadian Government; (3) Prohibition of all foreign immigration during a period of three years, except the immigration of farmers; (4) To restore in the Federal law concerning Sunday observance the following holidays, to be compulsory and observed like Sundays by the Catholics of the country: New Year's Day, Epiphany, Ascension Day, All Saints' Day, Immaculate Conception Day, and Christmas; (5) The adoption of measures to put a stop to the unemployment crisis. Careful consideration of these requests was promised by the Minister.

Ford Motor Company adopts 40-hour week.

The Ford Motor Company recently announced the adoption of the forty-hour week as a permanent policy in all its plants. Under the new plan the factories will be closed on Saturdays and Sundays and about 3,000 men will be added to the total force of the Company. It is stated that the change will affect approximately fifty thousand employees who will continue to receive the minimum wage of \$6 a day but will work five eight-hour days weekly. New employees, however, will receive the pre-war minimum wage of \$5 a day.

Arbitration and Conciliation for Alberta school teachers

The Premier of Alberta stated in the Legislature on March 7 that as the existing form of contract between school trustees and teachers did not appear to meet with the approval of either party, it was the intention of the Provincial Minister of Education to appoint a joint committee to draft a simple form of contract, this committee to be composed of an equal number of trustees appointed by the Provincial Trustees' Association and of teachers appointed by the Teachers' Alliance. One conciliation board had been appointed under the act passed at the last session to settle disputes between teachers and trustees (see LABOUR GAZETTE for December, 1921, page 1445). This Board decided that if a certain teacher resigned or were deprived of his position he should be reimbursed for the full amount of improvements (including garden) made by him on the school premises. Three other applications for Boards were recorded, but two of these cases were settled directly by the inspector of schools, the remaining case being found to be beyond the scope of the act.

Work of
Ontario
Committee on
Unemployment

It will be remembered that during the latter half of 1921 the Ontario Government appointed an Advisory Committee on Unemployment to advise it in matters pertaining to this question, with a view more particularly to minimizing the unemployment which was threatened for the winter of 1921-22.

The committee recommended, first, that the Ontario government should co-operate with the Dominion government and with the municipalities of the province with a view to providing as much work as possible for the unemployed. The committee was further of the opinion that the principle of inducing the people of the province to co-operate in an endeavour to return to normal business conditions would be productive of the largest volume of employment. The ordinary channels of trade, it was thought, provided the widest field for obtaining the best results. With the idea of stimulating industry and thus creating employment, the committee conducted an advertising scheme through the daily press and other papers. Advertisements were drafted to embody certain business principles with which to meet the changing conditions of industry and commerce; to foster a spirit of co-operation among different trade interests, and to appeal to the patriotism of all in providing a job for every man. The manufacturer, wholesaler, retailer, builder, banker, farmer, and worker, were each requested to adopt a system whereby goods were to be manufactured and passed through the channels of distribution to the consumer at the minimum price. Thus, it was estimated, the consumer would be able to buy more, industry would be stimulated, and employment would be maintained on a more normal level.

Reproductions of various appeals appearing in the press were given in a little booklet published by the committee. The appeals varied according to

the people to whom they were addressed, but all contained the following Plan of Co-operation:

The Provincial Advisory Committee on Unemployment considered the industrial situation and endorses the following statement of proposals:—

- 1.—That Manufacturers should be asked to take a price for goods on hand equal to the cost of replacement having regard to decreased cost of raw material and of labour used in manufacture.
- 2.—That Wholesalers should be asked to sell goods on hand at replacement prices.
- 3.—That Retailers should be asked to sell at replacement prices.
- 4.—Knowing that the costs of building at the present time have been considerably reduced, those desiring to build should be encouraged to ask for new tenders on their proposed work; and that building contractors and builders' supply people should make a special effort to reduce prices to a minimum in order to restore this important key industry.
- 5.—That Banks and financial institutions should be prepared to co-operate to the utmost with all productive enterprise by allowing all reasonable credits and by decreasing rates as rapidly as conditions may allow.
- 6.—That Farmers should be asked to maintain reasonable production, and in the event of a proportionate reduction being reached in other lines, should be prepared to make needful improvements and betterments.
- 7.—That Labour should be asked to take willingly a reduction in wages proportionate to progressive decrease in cost of living, in so far as such a reduction has not already taken place.

The above statement has been submitted to and endorsed by the following interests—manufacturers, wholesalers, retailers, building industries, agriculture, financial interests and the veterans.

Information of a general character was also incorporated in the booklet, to assist those who were helping to realize the objective of the campaign. As the temporary purpose of the Committee appeared to have been discharged, it was dissolved on March 16.

Apprenticeship training for plumbers in Quebec

Proposals for the training of apprentices in the plumbing and steamfitting trades were laid recently before the

Quebec Government by representatives of the Master Plumbers' Association of Montreal and their employees. It was proposed that in view of the lack of apprentices and of training facilities in these trades, the Provincial Government should either maintain a school for technical training, or increase the Provincial grants to the schools already in operation, the courses given at these schools being at the same time revised in accordance with the most modern practice. It was further asked that no pupils should be admitted to public classes for instruction in plumbing and steamfitting unless they are *bona fide* apprentices to master plumbers, and that all instructors be master plumbers and members of the Master Plumbers' Association of Montreal. An act to authorize the establishment of vocational courses in school municipalities is referred to elsewhere in this issue among the acts passed by the Quebec Legislature at the recent session.

Accident Reports to be furnished to Railway Commission

The Board of Railway Commissioners for Canada issued an order (No. 361) on March 15, 1922, requiring that every railway company

subject to the legislative authority of the Parliament of Canada shall give notice to the Board within six days after the head officers of the company have received information of any accident to any person using the railway, or to any employee of the company, or whereby any bridge, culvert, viaduct or tunnel has been made unfit for immediate use. Such notice must refer to accidents resulting from movement of trains, engines or cars, and not to those occurring in railway shops or other places on the railway, unless caused directly or indirectly by train, engine or car movements. The em-

ployee of the railway company who is in charge of the train, place or structure in connection with which the accident occurred is required in the event of derailments, collisions, failure of locomotive boiler, highway crossing and other accidents causing injuries to any classes of persons mentioned, to send a telegram to the chief operating officer of the Board at Ottawa, at the expense of the company, and at the same time that he reports to the company.

Work of Women's Institutes in Alberta

In the Alberta Legislature, on March 15, the number of women's institutes in the Province in 1921 was officially given as 330, with a total membership of 15,300. In 1915 only 42 institutes were in existence, with 1400 members. Fifty-nine Womens' Institute Girls' Clubs, with 1050 members, were also in existence last year. These organizations received special grants from the Provincial government. Part of the work carried on in recent years was the providing of household economic short courses, demonstrations and lectures, which were attended by 17,691 pupils in 1921. These courses were provided through the agency of the Women's Institutes, and the United Farm Women of Alberta Local Associations, but they were not confined to members of these organizations. The Local Women's Institutes and Girls' Clubs were responsible for the rent of the hall where courses were given, the advertising of the meeting, and the expenses of all local arrangements. In 1920-21 approximately \$90,000 was raised by the local Institutes, while in 1921 the Women's Institute Girls' Clubs raised about \$8,700. This money was expended in building community homes and rest rooms; on equipment of school playgrounds; on school conveniences; building of parks; hospital equipment; relief funds, and scholarship funds. The Institutes took part in distributing relief to the families in the drought-stricken area of South Al-

berta from December 1919 to May 1920, and subscribed over \$9,000 for relief purposes.

New Jersey
employers
endorse trade
unionism

The New Jersey
Chamber of Commerce
has established a Bu-
reau of State Research
which is turning out

what is claimed to be the most competent work on industrial relations known in the United States. A committee of the Chamber of Commerce itself, dealing with the question, says: "The practice which the State Chamber has been following of having its committees base their decisions on the investigations made by its Bureau of State Research; of maintaining the research work of the latter absolutely independent and free of all dictation from the officers or members of the chamber as to the character of facts or conclusions to be presented; of publishing the reports of the bureau free of all censorship; and of merely seeing that the men carrying on the research be thorough and unbiased students, fearless in their work—this practice is sound and should be continued and further developed."

The committee on industrial relations, which has just issued a new report, is composed of representative business men. Their findings were unanimous and were adopted by the Chamber. Labour difficulties, in the opinion of the writers of the report, mainly spring from three separate sources; the issue between wages and profits; the issue between the employer's claim to complete power of control and labour's democratic aspirations; and the issue over abuses, such as arbitrary conduct of the management on the one side and sabotage and ill-treatment of non-union labour on the other. For dealing with these questions, the writers of the report outline certain policies which they group under three heads: constructive arrangements within the shop aiming at harmony of interest and active co-operation; industry-wide constructive arrangements; and the policy of stamp-

ing out the unions and placing absolute control in the hands of the employers. The New Jersey Chamber of Commerce is emphatically against this last method, and thinks it should be avoided at all costs. "This militant tendency", it states, "seems to make a strong appeal to many employers at this time of business depression. A movement is now on foot which, misusing the name of 'Open Shop' and 'American Plan', is smashing labour organizations throughout the country by locking the union out and forcibly deunionizing the workmen. Together with the abuses of unionism this movement is destroying the constructive substances of unionism and stifling the just democratic aspirations of the workmen. It is undermining the confidence of labour in employers and ruining the foundation for co-operation between them."

Study of the
"three-shift"
plan

Investigators of the
American Engineering
Council of the Feder-
ated American En-

gineering Society recently completed a survey of the larger "24-hour industries" of the United States, to learn whether the three-shift plan of operation is economical, efficient and popular with the worker. The following announcement has been made by the Society: "Three-shift plants have maintained themselves in the same markets with two-shift plants. Even during the very serious depression of 1920-21 and the strong temptation and tendency to link reduced wage rates with lengthened hours, very few plants have gone back from eight-hour to twelve-hour shifts. There have been instances in all types of continuous industries which have gone to three shifts with striking gains in efficiency, either in reductions of the number of men required per shift, or through increased output, or through heightened efficiency in other ways. Taking the continuous plants as a whole, the immediate effect of going to three shifts probably will be a substantial increase in labour efficiency,

but not so great an increase—barring exceptional plants—as to permit the paying of as high weekly wages as men would receive for 12 hours' work, without increasing cost. But it would be possible without increasing costs, to pay the men a weekly wage which, once they had become used to the eight-hour shift, they would much prefer to the alternative of a twelve-hour day and twelve-hour wage."

"Blind alley"
employment
for boys

The British Ministry
of Labour recently issued a report on casual
employment of boys in

ship-repairing and on dock work at Liverpool, England, in which it is concluded that the system of employment, as a rule, offers no permanent prospects to the boys engaged under it, and makes a very bad preparation for adult life. The report shows that in ship-repairing the boys work either as scalers or as rivet lads, and that boys at dock work turn on steam for winches, guide fall-rope, stitch bags, etc. The ship-repairing work is not regarded as leading to continuous employment when the boys become adults, or as being in any sense a training for further employment on the docks. In the case of the dock boys, however, they usually become porters on attaining adult age, and to this extent their work may be considered a training for adult employment. The absence of any systematic method of engagement is severely commented on in the report. The boys usually apply for work each day. If they are fortunate enough to obtain it, it may last a day, a few days or longer, but it is not customary for the boys to remain very long on the same work. Owing to the intermittent character of the work the boys become more and more unwilling to settle down to steady employment. With the exception of a Young Men's Christian Association canteen, which was started in March of last year, no provision is made for the health and welfare of the boys. In connection with this, difficulty is said

to have been experienced in the attitude of the boys, who "cannot understand... anyone wanting to help them unless prompted by some ulterior motive."

Effects of
mining safety
committees

The results of month-
ly safety meetings
which were inaugur-
ated in January 1920 at

the Oliver Iron Mining Company of Ironwood, Michigan, are shown in a report of investigations (Serial No. 2251) of the United States Bureau of Mines. The meetings, the report states, are held under the chairmanship of the assistant superintendent, and the various mining captains, surface foremen and underground foremen are required to attend. Accident reports and charts showing the results of the previous monthly underground inspections by a central safety committee are furnished by the safety engineer, the accident percentages of all the foremen at each mine or surface working are averaged, and the accidents are further classified according to causes and class of labour. Safety methods and accident prevention measures are discussed at these meetings. During the year prior to the establishment of the safety meetings, there were a total of 887 accidents, three of which were fatal, making an average of 73.9 per month. During 1920, after the meetings were inaugurated, there were a total of 790 accidents, only one of which was fatal; making the accident record for the year 65.7 per month, or 8.2 less accidents per month than in 1919. During the latter part of 1920 there were a total of only 368 accidents or 61.3 per month, a decrease of over 17 per cent on the accident rate before safety meetings began. Fifty per cent of the accidents were reported as resulting in no time lost. The record covers seven different mines employing over 2,500 men. The report states that in order to stimulate the interest and co-operation of the miners themselves, regular and thorough first-aid and mine rescue instruction is given under the supervision of a safety en-

gineer. The company maintains a corps of 150 trained first-aid and 42 mine-rescue men who are given regular monthly training.

Miners' Welfare By the British Mining Industry Act of 1920 a fund was constituted to be used for

purposes connected with the social well-being, recreation and conditions of living of workers in and about coal mines, and with mining education and research. The fund is supported by a levy of a penny a ton on the output of each mine, and the duty of allocating the money from time to time standing to the credit of the fund rests with a

Committee appointed by the Board of Trade. The first allocations of money from the fund were made at a recent meeting of the Committee. Among the grants voted were £12,000 for research work on miners' safety lamps and coal-dust dangers, and £1,000 for research on the control of atmospheric conditions in deep and hot mines. This research will be carried on under the supervision of the Mines Department. A grant of £3,000 was made towards the provision of additional lecture-room and laboratory accommodation at the Nuneaton County Mining School, and various smaller grants were made in aid of local recreation schemes.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

I.—The Labour Market, Strikes, Prices.

The Labour Market

THE employment situation, as indicated by employers making returns, was unfavourable during March, reductions, largely of a temporary and seasonal character, having occurred throughout the month. During the corresponding period of last year the tendency was also downward, but the volume of employment for the month under review was slightly less than in March, 1921. Trade unions reported more employment at the beginning of March than in both January and February. The offices of the Employment Service continued to record improvement in the daily average of business transacted, increases having been shown in vacancies notified and placements made. A slight decline in the number of applicants, however, was reported.

Fortnightly reports from employers to the Dominion Headquarters of the Employment Service of Canada for the period **EMPLOYERS' REPORTS** February 15 to March 15 showed a net decrease in the employment they afforded. During the first fortnight under review gains were recorded, but these were not of sufficient magnitude to counterbalance the losses reported in the second part of the period. The Maritime provinces, Ontario and the Prairie provinces shared in this retrogressive movement, the decrease of over 1,900 persons in the Prairie provinces being particularly noteworthy. The logging industry registered the most substantial losses, due to seasonal inactivity, nearly 7,000 persons having been released during the period under review by the employers

making returns. Contractions on a very much smaller scale were recorded in railway construction and operation. Employment in the leather group continued to decline, considerable reductions having been shown in boot and shoe factories. A less favourable situation was registered in street railway and cartage, trade (both wholesale and retail), non-metallic mineral products and rubber, though the decreases in personnel were comparatively slight. In the iron and steel industry, over 2,000 persons were added to the staffs of the firms reporting. Greater activity in establishments manufacturing railway cars and agricultural implements contributed to this gain, although improvement was also evidenced in several other branches of the industry. The lumber group continued to report expansion, largely due to spring activity in sawmills, while furniture factories continued to enlarge their staffs. In the textile group factories producing garments and personal furnishings, thread, yarn and cloth and hosiery and knit goods were busier. Noteworthy increases were also reported in shipping and stevedoring, highway construction, telephone operation and in glass and cement factories. The situation generally continued to be unfavourable in comparison with the corresponding period of last year. Less employment was recorded in the iron and steel, logging, railway operation, pulp and paper and the trade groups, but a more favourable movement was shown in leather, lumber, textiles, metallic ores, street railway and cartage and shipping and stevedoring.

Increased activity was again registered at the beginning of March by the 1,528 trade unions making returns, whose membership included 163,033 persons. The percentage of unemployment stood at 10.6 as compared with 13.9 in February and 16.1 at the beginning of March, 1921. All provinces recorded more employment than in the previous month but conditions in Nova Scotia and

Quebec especially showed improvement. In comparison with the corresponding month in 1921, New Brunswick and Manitoba were the only provinces to report more unemployment, while a very much more favourable situation was recorded in British Columbia, where there was considerably less idleness. The mining and manufacturing industries afforded more employment than in February, and advances on a smaller scale were also registered in the construction and transportation groups. The increase in the manufacturing industries was partly due to greater activity among garment and iron and steel workers. The pulp, paper and printing divisions reported slightly more employment than in the preceding month, but the situation was not as good as at the beginning of March, 1921. The textile trades continued to be busy, due, as mentioned above, to increased activity among garment workers especially in Montreal. In the iron and steel group all trades reported less unemployment with the exception of patternmakers who were not quite as fully employed. Coal miners in Nova Scotia were busier, but asbestos miners in Quebec and quarry workers in Nova Scotia recorded a more unfavourable situation. In the transportation group nearly 7 per cent of the members represented were unemployed as compared with approximately 8 per cent in February and with slightly over 10 per cent in March of last year. This improvement occurred largely among steam railway workers. Less employment was reported in water transportation than in February, especially in British Columbia. In the local transportation group more employment was registered by street railway workers, but teamsters and chauffeurs were somewhat slacker. In the building and construction group 6,503, or 29.2 per cent of the members of the 218 trade unions reporting, were unemployed, as compared with 32.8 per cent in February and with 31.4 per cent in March of last year. The greater part of this unemployment continued to be recorded in the provinces of Ontario

and Quebec. Bridge and structural iron workers, bricklayers, masons and plasterers, carpenters and joiners, granite and stone cutters, and painters, decorators, and paper hangers were busier than in February, but steam shovel and dredgemen, electrical workers, plumbers and steamfitters and hod carriers and building labourers were not as fully employed. The situation indicated by fishermen was better, while lumber workers and loggers were not as busy as in the previous month. Hotel and restaurant employees and stationary engineers and firemen reported greater activity, but more unemployment was shown than in the corresponding month of 1921. Theatrical stage employees were slacker than at the beginning of February and also than in the corresponding month of last year. Employment for barbers remained on the same level as in February.

Reports from the offices of the Employment Service of Canada for the month of February,

EMPLOYMENT 1922, show that 21,404
OFFICE persons were referred
REPORTS to employment and
10,624 were placed in
regular, and 9,002 in casual work. Of the placements in regular employment 8,632 were of men and 1,992 of women. Employers notified the Service of 16,292 vacancies for men and 6,279 for women, a total of 22,571 vacancies. The number of applications for work was 37,345, of which 30,814 were from men and 6,531 from women. The business of the offices during the month was in greater volume than during the same period in 1921, but compared with reports for January, 1922, a slight decline was indicated in the volume of transactions, due however to the shorter month rather than to a decrease in business. As indicated by the following figures, vacancies and placements showed a marked recovery from the depression reported at the end of January, and the increases in each case more than offset the previous contractions. There was a slight

falling off in the number of applications for work.

During the first half of February, 1922, the average number of applications made daily to the offices was 1,590, as compared with 1,595 during the latter half of January, and with 1,487 during the first half of February a year ago. The average number of vacancies reported daily to the offices was 921, as compared with 856 during the preceding period, and with 708 during the corresponding period of last year. Placements during the period averaged 796 daily, as compared with 911 during the preceding period. During the first half of February, 1921, placements averaged 797. Of the placements effected during the period, the average was 445 daily in regular employment and 352 in casual work.

During the latter half of February, 1922, vacancies again increased, showing a daily average of 960. This may be compared with an average of 717 during the same period of 1921. Applications for employment declined from the preceding period to a daily average of 1,523, while during the latter part of February, 1921, applications averaged 1,339 daily. The average number of placements, daily during the period was 839 as compared with 790 a year ago. Placements in regular employment declined slightly averaging 440 daily, while placements in casual work increased to 399 daily.

Employment in the building trades as indicated by the value of the building permits issued in 56 BUILDING cities showed a considerable increase during PERMITS AND February as compared CONTRACTS with the previous AWARDED month; the total value of the permits issued rose from \$2,933,035 in January to \$4,216,463 in February a gain of \$1,283,328, or 43.8 per cent. In comparison with the corresponding month in 1921 an increase of \$960,578, or over 29 per cent, was shown, the value of the permits issued in February, 1921, having totalled

\$3,255,885. All provinces with the exception of Alberta and British Columbia reported increases in comparison with the preceding month, that of \$1,103,747, or nearly 69 per cent, in Ontario being the most noteworthy. In comparison with February, 1921, Ontario with an advance of \$1,409,858, or approximately 108 per cent, showed the greatest expansion. New Brunswick and Manitoba also reported gains, but on a much smaller scale. Of the larger cities, Toronto and Winnipeg registered increases both as compared with the preceding month and with the corresponding month in 1921. At Montreal and Vancouver gains were recorded over January, 1922, but the value of the permits issued was less than in February of last year. Of the smaller centres Moncton, Hamilton, Kitchener, Port Arthur, Stratford, St. Thomas, Windsor, Edmonton and Nanaimo all reported increases in the value of the building permits issued, as compared both with the preceding month and with February, 1921.

According to the Canadian Building Review issued by MacLean's Building Reports, Limited, the value of the contracts awarded during February totalled \$10,718,300 as compared with \$8,392,600 in January and with \$17,641,000 in February of last year. Ontario and Quebec together issued \$8,463,100 or nearly 79 per cent of the contracts awarded during February; the Maritime provinces reported \$56,500 and the four western provinces \$2,198,700. Of the total for February, \$4,049,200 was to be expended on residences, \$2,539,600 on business establishments, \$610,000 on industrial buildings and \$3,519,500 on engineering contracts.

Strikes

The loss of time on account of industrial disputes during March was less than during February but greater than during March, 1921. There were in existence at some time or other during the month 19 strikes, involving about 2,309 workpeople with an estimated time loss

of 58,943 working days, as compared with 25 strikes, 2,431 workpeople and 63,590 working days in February; and 32 strikes, 3,468 workpeople and 550,502 working days in March, 1921. On March 1, there were on record 18 strikes, affecting 2,291 workpeople. One strike was reported as having commenced during March, compared with eight during February. Two of the disputes commencing prior to March terminated during the month, leaving 17 strikes involving about 2,159 workpeople on record at the end of the month.

Prices

In prices the movement was downward, both the wholesale prices index number and the family budget of retail prices of foods showing appreciable decreases, the greatest being in dairy products. The index number of wholesale prices was down to 225.6 for March as compared with 229.5 for February; 263.1 for March last year; 349.0 for March, 1920; 269.2 for March, 1918; 224.9 for March, 1917; and 137.0 for March, 1914. In addition to the decreases in dairy products there were decreases during the month in metals and in building materials, and increases in grains, livestock and miscellaneous foods. In retail prices the average cost of a family budget of twenty-nine staple foods in some sixty cities was down to \$10.54 at the beginning of March as compared with \$10.61 for February; \$13.23 for March last year; \$15.98 for March, 1920; \$12.65 for March, 1918; \$10.70 for March, 1917; and \$7.68 for March, 1914. The chief changes for the month were decreases in eggs, milk, butter, and cheese. There were slight increases in meats and slight decreases in nearly all the other items. Coal and wood were practically unchanged. The total for food, fuel, and rent averaged \$20.96 at the beginning of March as compared with \$21.07 for February; \$23.87 for March last year; \$25.01 for March, 1920; \$20.00 for March, 1918; \$17.16 for March, 1917; \$14.22 for March, 1916; and \$14.39 for March, 1914.

II.—Industries and Trades during March, 1922

Logging

Marked declines in employment were recorded in logging camps owing to the commencement of spring and summer dullness. These contractions were widespread in application but the shrinkages in Ontario were especially large as that province had experienced more activity than elsewhere during the winter. In Quebec large losses in personnel were indicated by operators at Hull and Louisville, while at La Tuque and Three Rivers there were declines on a smaller scale. At St. Jovite Station and River Desert there were minor changes only. In Ontario pronounced reductions in staffs occurred, especially at Blind River, Braeside, Fort Frances, Pembroke and other upper Ottawa points. In British Columbia on the other hand, the situation was rather more favourable, increased activity being reported at Alert Bay, Vancouver and Ladysmith. At Headquarters, however, there was a minor decline in payroll. Information respecting the month of February which was not available for insertion in the March issue of the LABOUR GAZETTE shows that timber of all species scaled in British Columbia in the former month totalled 91,145,323 feet as compared with 92,908,707 feet in January. The quantity of Douglas fir and red cedar scaled again formed over 65 per cent of the total.

Mining

The mining industries showed slight changes only during the month of February, but the trend of employment was rather downward. In Nova Scotia, coal mines registered slight increases in activity on the whole, due to extension of operations in the Glace Bay district, where employment had been on a low level for several months. Practically no change in staff was indicated at Inverness and Westville. The mines at Joggins Mines, Little Bras D'Or, Stellarton and Sydney Mines employed rather larger working forces than in

February, but at Springhill a reduction in staff occurred. At Minto, N.B., employment in the coal mines was in slightly lesser volume. In Alberta employment declined from the February level. At Blairmore, Canmore and Brule Mines larger payrolls were reported. On the other hand, the mines at Coleman, Commerce, Edmonton, Nordegg and Hillcrest were slacker, and at Drumheller one large colliery was practically closed down. In British Columbia fairly large increases in employment at Cumberland were offset by reductions in staff at Fernie. At Nanaimo decreased activity was indicated. Many of the mines in Nova Scotia and Alberta continued to work only a limited number of days in the month. The metal mines in Ontario and British Columbia afforded practically the same volume of work as in February. The gold mines at Timmins and South Porcupine, Ont., were slightly busier, but at Schumacher there was a minor reduction in staff. The nickel mines at Nickelton, Copper Cliff and Coniston employed practically the same working forces as in the preceding month. Silver mining at Cobalt was in slightly greater volume. In British Columbia additions to staffs were made in the gold, silver, copper and zinc mines at Trail and Britannia Beach. At Rossland and Kimberley approximately the same level of employment was maintained as in the preceding month. The gold mines at Stewart also employed the same number of persons as in February. Quarrying at St. John, N.B., was slightly more active. The asbestos mines in Quebec afforded rather more employment than during the previous month, particularly at Asbestos, Black Lake, and Coleraine. At Thetford Mines, however, no change in the situation was reported. The salt mines at Amherstburg, Ont., employed a slightly larger working force than in February.

Manufacturing Industries

Employment in the edible plant products group was in slightly greater volume than in February partly owing to the resumption of activity in the sugar industries. Sugar refineries at St. John, N.B., employed larger working forces than for several months. Confectionery production at St. Stephens remained on the February level. On the other hand, chocolate factories at Halifax, N.S., were busier, and the sugar refineries at Dartmouth also afforded more employment than for some time past. Sugar refineries in Montreal, Que., were slightly busier on the whole, although minor reductions in personnel were indicated in some factories. Bakeries in the same city maintained the same staffs as in the preceding month. The production of biscuits and confectionery in Montreal employed larger working forces than during both January and February, but at Joliette there was a falling off in employment. Flour and grist mills in the former centre afforded the same volume of employment as in the preceding month. In Ontario the situation was more favourable. Sugar refineries at Chatham were somewhat slacker, but an important sugar factory at Wallaceburg, which was practically closed down for repairs during the preceding two months reinstated a large part of its staff during March. Biscuit manufacturing at Brantford showed more activity than in February, while there were minor declines in activity in London and Toronto. The production of starch and glucose at Fort William and Cardinal employed larger working forces than for several months, although in the former centre the plant was not working anywhere near capacity. Flour and grist mills at Keewatin and Port Colborne were not quite as busy as in February. The production of pickles and sauces at Leamington eased off to some extent. Breakfast food mills at Peterborough showed a minor increase

in activity. Employment in bakeries at Toronto declined slightly and the confectionery plants also were slacker than in February. Biscuit factories at Winnipeg, Man., employed smaller working forces, but the flour and grist mills, on the other hand, were rather busier. The latter industry at Moose Jaw, Sask., however, was less active. Sugar refineries in Vancouver, B.C., also employed fewer persons than in February.

A slight improvement over February was indicated in the edible animal group, there being increased activity in the fish preserving division in British Columbia. In the province of Quebec a minor reduction in activity occurred in slaughtering and meat packing plants at Hull. On the other hand, at Montreal rather larger working forces were reported. The situation in Ontario showed no change. Slaughtering and meat packing plants at Peterborough were decidedly slacker and at Toronto also decreases in staff were reported. Dairies at Ottawa registered minor increases in activity, but at Toronto there was a slight falling off in employment. Abattoirs and meat packing plants in Winnipeg were not as busy, and at Calgary there were also reductions in staffs. Dairies in Edmonton employed smaller working forces than during the preceding month.

Among miscellaneous foods, baking powder factories at Toronto afforded practically the same volume of employment as in the preceding month.

Some expansion in the employment afforded in the liquors and tobacco group took place during March, partly owing to the reinstating of employees laid off for several months in several tobacco factories. In Montreal and Quebec city, the production of tobacco employed larger working forces than for some months past. Breweries in the former city were somewhat busier also, although the changes in staff were slight. In the province of Ontario low activity was indicated. Tobacco factories in Toronto, however, showed improvement,

and the February level of employment was maintained in Hamilton. The production of distilled liquors at Walkerville eased off to some extent, fewer workers being employed than for several months past.

Increased activity was reported by manufacturers of iron and steel products early in March, but the temporary closing of the railway car shops affected employment adversely at the end of the month. The shipyards at Halifax, N.S., were busier. Car manufacturing at New Glasgow and rolling mills at Sydney Mines also employed larger working forces, but a very pronounced reduction in staff occurred in the crude, rolled and forged division of the industry at Sydney. Ship building at Montreal employed a smaller working force than during January and February; at Sorel and Three Rivers, however, increased employment was indicated. The production of railway cars and parts at Montreal absorbed a rather larger number of workers during the first part of March, but the temporary cessation of activity in railway car shops caused considerable contractions at the end of the month. Foundries and machine shops in the same centre employed the same staffs as during the preceding month. Forging and rolling mills were decidedly busier in Montreal and the production of stamped and enamel ware in the same city also was in greater volume. Agricultural implement factories at Terrebonne showed more activity than for several months, although they were not yet working to capacity. Manufacturers of hand tools at Rock Island reported reductions in employment. General plant machinery works at Sherbrooke registered minor declines in activity, and structural iron and steel fabrication plants were not as busy as in February. Employment in the iron and steel industry in Ontario on the whole was brisker although in that province

also there were local variations. The automobile factories at Chatham, Ford, Oshawa and Walkerville continued to afford more employment than for several months, while in St. Catharines staffs remained practically stationary. The production of agricultural implements at Hamilton, Toronto and Smith's Falls was in greater volume than in February. At Brantford there was a minor decline in activity in such plants, and plow works in the same centre were not as busy. Engine and boiler factories at Brantford and Toronto employed larger working forces than during the preceding month, while at Galt employment in that industry remained practically stationary. Increased activity was reported by foundries and machine shops at Brantford, Oshawa and Toronto. The production of small hardware at Brockville, Hamilton and Ingersoll showed very little change when compared with the returns for the preceding month. Employment in heating appliance works at Guelph and Toronto also remained practically stationary, but at London a very slight downward tendency was in evidence. The production of hand tools at Dundas was slightly greater than in February, while at St. Catharines no change in the situation was indicated. Cast iron pipe factories at Guelph were not as fully employed as during the preceding month, but at Welland there was a decided increase in employment in wrought iron pipe concerns. Forging mills at Oshawa and Swansea were very much busier than in February, particularly in the former centre. The production of trade machinery at Peterborough showed a slight increase over the preceding month. Sheet metal works at Oshawa employed larger working forces than for several months. The rolling mills at Sault Ste. Marie and Toronto also reported increased activity, although they were not yet working to capacity. The production of stamped and enamel ware at Toronto was in greater volume than for some time. Employment in safe and vault factories in the same city declined considerably. Factories

turning out motor cycles and bicycles at Weston were busier than in February. In Manitoba there were minor increases in activity in the iron and steel industries. Structural iron and steel fabrication at Winnipeg eased off very slightly. The rolling mills at Selkirk, which had been practically closed down for several months, reopened with a large part of their staff. In British Columbia employment in the iron and steel group declined to some extent, especially in the shipyards at Vancouver. At Victoria, however, increased activity was reported in ship building.

Employment in the non-ferrous metal products group was in slightly greater volume during March

NON-FERROUS METAL PRODUCTS than in the preceding month, there being minor increases in staffs in many factories. This

favourable movement was evident in the province of Quebec, where Montreal brass, bronze and copper concerns on the whole were busier than for several months. Can works in Maisonneuve showed a minor decline in payroll. Practically no change in the situation was reported by jewellery manufacturers in Montreal. Aluminum factories at Shawinigan Falls registered a nominal increase in personnel. In Ontario the situation also was slightly improved although the changes were very small. Brass, bronze and copper works at Hamilton and Toronto employed larger working forces than during the preceding month while at Sarnia staffs remained stationary. Copper and nickel refineries and smelting plants at Copper Cliff showed nominal increases in employment. The production of silver and cobalt at Port Colborne, however, eased off slightly. Factories producing aluminum ware at Toronto engaged larger staffs than for several months past, and silver and plated ware manufacturers also were busier.

Employment in the leather industries during March continued to be rather depressed, although some factories recorded expansion. The production of boots and

shoes in Montreal was in greater volume on the whole. In Quebec City general improvement was reported. The St. Hyacinthe factories also were more fully employed. The production of harness and saddlery in Montreal employed rather larger working forces than in the preceding month. In Ontario the tendency was downward although some districts showed improvement. Tanneries at Toronto and Kitchener were busier but at London, Newmarket and Oshawa reductions in personnel were registered. Boot and shoe concerns at London and Toronto reported increased activity. On the other hand, contractions in employment were reported at Galt, Perth, Hamilton, Tilsonburg and Aurora.

Very little change in employment was reported by concerns manufacturing rubber products during March. Footwear factories at Granby, Que., were rather busier on

the whole. At Montreal and St. Jerome no change in the situation was indicated. Tire works at Montreal were considerably less active than in February; the production of rubber and elastic goods in the same centre also declined. Footwear plants at Guelph, Merriton and Kitchener recorded smaller working forces than during the preceding month. Manufacturers of rubber tires at Toronto, Guelph and Kitchener were decidedly busier, especially in the first named city. The production of rubber and elastic goods at Toronto showed a considerable contraction, although some firms reported a more favourable situation in February. At Bowmanville increased activity was indicated also.

Further improvement was reported by manufacturers of lumber products during March, seasonal activity in sawmills continuing to cause large increases in employment. In the province of Quebec additions to staffs were general. The sawmills at St. Pacôme, Sayabec and Breakeyville reported more employment than in February. Planing and moulding mills at Montreal, Port Etchemin and Quebec city also showed improvement. The production of household furniture at Beauharnois and Coaticook was in slightly greater volume than for several months and factories producing school and office furniture at Cowansville also were busier. Wooden ship building and repairing plants at Sorel and Levis employed larger working forces than for several months, although their staffs were still below normal. Match factories at Hull were decidedly busier. The production of cork goods at Montreal absorbed larger working forces. In Ontario also the tendency was favourable. Sawmills at Arnprior, Fort Frances, Rockland and Keewatin increased their staffs during the month, although the changes were not pronounced. The production of shooks and boxes at Pembroke showed a gain. Refrigerator factories in Brantford were somewhat busier. Office furniture manufacturers at Newmarket reported a minor decline in activity and household furniture plants at Stratford were slacker. The production of billiard tables and materials at Toronto eased off slightly. Carriage and wagon factories at Chatham and Orillia reported larger working forces than for several months. Washing machine and wringer plants at London were not as busy as in February. In Manitoba the sawmills at The Pas reported increased activity. British Columbia lumber manufacturers also showed improvement. The sawmills at Chemainus, Fraser Mills, Golden and Vancouver reported considerable expansion. At Wardner, on the other hand, employ-

ment in the sawmills declined. Practically no change in the situation was reported by manufacturers of musical instruments during March, minor increases and decreases in staffs offsetting each other. Voice reproducing machine factories at Montreal registered reductions in activity. Piano and organ factories at St. Hyacinthe also afforded less employment than in February. In Ontario the piano industry absorbed few workers at Toronto, while there were minor additions to staff at Guelph and Goderich. Voice reproducing instrument plants at Toronto reported approximately the same staffs as in February.

Considerable increases in activity were reported by pulp and paper manufacturers during the month under review. In New Brunswick rather small increases in employment were reported at Chatham and St. John, but at Bathurst reductions in payroll occurred. The situation as indicated by paper manufacturers at Liverpool and Murray, N.S., remained practically the same as in February, there being small additions to staffs only. In Quebec the pulp and paper industry was considerably more active. Large additions to staffs were reported in paper mills at Hull and Kenogami, while gains on a smaller scale occurred at Chandler, Chicoutimi, East Angus and La Tuque. On the other hand, at Windsor Mills, Doncona and Cap Magdeleine slightly reduced activity was registered. Firms at Shawinigan Falls, Three Rivers and Bagotville recorded no change in the situation as compared with the preceding month. Conditions in Ontario showed some improvement on the whole. The paper mills at Cornwall, Ottawa and Sault Ste. Marie reported practically the same staffs as in February. At Iroquois Falls, Thorold, Sturgeon Falls and Smooth Rock Falls considerable increases in activity were registered. Firms at Espanola and Hawkesbury on

the other hand, reported rather smaller working forces than in the previous month. Publishing houses in Toronto showed a minor increase in personnel. Printing plants in Winnipeg, Man., registered very little change on the whole, slight increases offsetting minor declines. At Regina and Saskatoon, Sask., and Edmonton and Calgary, Alta., employment in printing establishments also remained on the February level. In British Columbia the situation on the whole was less favourable. The production of pulp and paper at Ocean Falls declined largely. At Powell River, however, fair sized additions to staffs were made. The mills at Port Alice employed practically the same working force as in the preceding month. The printing trades in Vancouver and Victoria were rather dull.

Employment in the textile industries during March was in greater volume than in the preceding month. In Nova

TEXTILE PRODUCTS

Scotia slightly increased activity was reported

by cotton manufacturers at Yarmouth and by hosiery and knitting plants at Truro. Increased activity was reported in the production of cotton, cloth and yarn at Marysville, N.B. At Milltown, however, reductions in personnel were reported by cotton manufacturers, while at St. John the situation remained practically stationary. Firms in the province of Quebec were slightly busier on the whole, although in some cases reductions in employment were reported. Cotton mills at Montreal, Three Rivers, Magog, and Montmorency Falls, registered increased activity, but at Sherbrooke and Valleyfield contractions in employment occurred. In Montreal the production of men's clothing was in greater volume than in February and women's garment factories also were busier. Men's furnishing plants at Montreal and St. John reported minor reductions in personnel. Corset manufacturing in Quebec city also declined to some extent.

Manufacturers of thread at Montreal and St. John's on the whole reported larger payrolls than for several months, although in the former city there was less activity in one or two factories. The silk mills at Sherbrooke were busier and a nominal increase in employment was recorded in woollen mills in the same city. The production of hosiery and knitted goods at St. Hyacinthe eased off slightly. Felt goods manufacturers at Lachine Mills maintained the same staffs as in February. Textile firms in Ontario also reported increased activity on a moderate scale. Women's garment factories in Toronto on the whole reported smaller payrolls than during the preceding month, although in some cases increased operations were indicated. The production of men's clothing in the same city showed expansion, but at Hamilton and London there were reductions in staff. Hosiery and knitting mills in Toronto afforded practically the same volume of employment as during February, increases in some establishments offsetting declines in others. At Hamilton some improvement was reported on the whole, although local fluctuations also were recorded. Knitting mills at Brantford, Galt, Woodstock and Paris reported minor increases in activity while at Dunnville there was a slight contraction. The production of men's furnishings at Toronto, Kitchener and Walkerville was greater than in February, especially in the two centres first named. Woollen yarn and cloth manufacturers at Toronto, Almonte, Hespeler and Preston were busier, while at Peterboro there was a falling-off in employment. Factories turning out cotton yarn and cloth at Hamilton, Welland and Cornwall reported larger payrolls than for several months. The cordage factories at Brantford maintained their usual level of employment, but at Welland the number of persons employed in this industry declined. Wool carding and pulling plants at Carleton Place registered increased activity. Practically no change in the employment afford-

ed by manufacturers of silk goods occurred at Brantford and St. Catharines. The production of felt goods at Kitchener also remained on the February level. Hosiery and knitting mills at St. Thomas, St. Catharines, Perth and Carleton Place reported almost the same sized working forces as in the preceding month. Men's clothing factories at Toronto were somewhat busier, and at Hamilton nominal additions to staff were recorded. Bedding factories in Toronto were slightly slacker than in February.

Employment in the oil refineries in Montreal remained on the usual level.

At Sarnia, Ont., there was a considerable reduction in activity. The refinery at Dartmouth, N.S., also reported some curtailment in operations, while at Ioco, B.C., employment remained steady. The production of oxygen and acetylene gases at Welland, Ont., employed approximately the same staffs as in February. Cyanamid factories at Niagara Falls, Ont., were considerably busier. The production of gas in the same city showed a minor increase.

Considerable recovery from losses reported earlier in the winter occurred in this group during the month under review.

CLAY, GLASS AND STONE PRODUCTS Glass factories in Montreal were decidedly more active. There was, however, a decline in employment in the production of cement in the same city. In Ontario the situation was considerably more favourable, the glass industry especially showing marked improvement. The glass plants at Hamilton and Wallaceburg, in particular, were very much busier. In Toronto, however, employment in glass factories remained on the February level. Increased activity was also indicated in cement plants at Belleville and Port Colborne.

The production of explosives in Montreal and of ammunition at Brownsburg, Que., employed approximately the same staffs as in February.

CHEMICALS Employment in paint and varnish factories in the former centre remained steady. Soap production in Toronto experienced a decided falling-off. The number of persons employed in the manufacture of drugs and medicinal preparations at Walkerville, Ont., was practically the same as in the preceding month.

This group as a whole showed some expansion, which partly indicated reaction from earlier losses in employment. ELECTRICAL APPARATUS Electrical appliance factories in Montreal were busier than for several months. In Ontario improvement was reported also, especially at Hamilton, Stratford, St. Catharines and Toronto.

Employment in electric current plants during March was in greater volume than during the preceding month. Slight improvement was reported in Montreal, while in Quebec city the usual level of employment was maintained. Toronto power plants employed larger working forces. In Winnipeg the situation remained stationary and in Vancouver increased activity was indicated.

There was a minor decline in employment in broom and brush factories in St. John, N.B. In Ontario, however, this industry showed slight improvement, especially at Port Elgin, Hamilton and Toronto. There was practically no change in the employment afforded in window shade works at Lachine, Que. The production of roofing materials at Montreal showed an increase, as did also that of surgical supplies in the same city. Photographic apparatus plants

in Toronto engaged larger working forces than for several months. Manufacturers of plumbers' supplies in London employed slightly fewer people than in February.

Construction.

Employment on railroad construction and maintenance, as reported by the Canadian Pacific, Grand Trunk, and Canadian National Railways, declined during March. The Canadian Pacific showed a minor increase in staff, but the Grand Trunk and the Canadian National registered reduced activity. Of the net decline of 1,600 persons, over 1,500 men were released by the latter system, and the Grand Trunk let out approximately 100 employees.

The value of the building permits issued in 56 cities during February totalled \$4,216,463 as compared with \$2,933,035 in the preceding month and with \$3,255,885 in February of last year. Alberta and British Columbia reported less anticipated building than in the preceding month, but in all other provinces there were increases. During March early spring activity was noted in the employment afforded by building contractors. In Nova Scotia, however, the tendency continued downward, firms at Halifax, in particular, reporting further reductions in staff. At St. John, N.B., the building trades were somewhat slacker than in February. Very little change in the situation was indicated by building contractors in the Province of Quebec. Many firms in Montreal, reported reduced activity, but other concerns registered larger payrolls. There was a decrease in the volume of employment afforded by contractors at Sherbrooke. In Ontario the movement on the whole was rather favourable. Increased activity was indicated by a considerable number of Toronto employers. At Hamilton and Windsor staffs remained practically stationary. In London, New Liskeard, Walkerville and Fort William slight improvement was noted. The

construction of public highways in Ontario also afforded more employment. Firms in Winnipeg and other western cities reported no change in the situation as compared with the preceding month.

Transportation.

The gross earnings of the Canadian National Railways during March amounted to \$9,956,693 as compared with \$7,471,399 in February. Information respecting the month of February, which was not available for insertion in the March issue of the LABOUR GAZETTE, shows that the gross earnings of the Canadian Pacific Railway during February were \$11,303,693 as compared with \$11,337,975 in January and with \$12,768,987 in February of last year. The volume of employment afforded by the Canadian Pacific, Grand Trunk and Canadian National Railways in operation showed some improvement during March. These departments which included general offices, trainmen, engine crews, station employees, sleeping, parlour and dining car employees, added approximately 500 persons to their staffs during the month, the increases being of a general nature. The Canadian Pacific and Canadian National Railways both increased their payrolls by over 100 persons, while the Grand Trunk Railway enlarged its working force by approximately 300 employees. Very little change in the situation was reported by local transportation companies during March. In Montreal rather less activity was indicated and in Quebec city the usual level of employment was maintained. Rather small increases in staffs were reported by the street and electric railway companies at Hamilton, London, Ottawa and Toronto. In Winnipeg, Calgary and Vancouver also the situation showed slight improvement.

Trade.

A more favourable movement than has been evidenced for several months was reported by retail shops during March. Montreal firms, on the whole,

were slightly busier. In Toronto sales forces were somewhat smaller, but in Ottawa there was a minor increase in activity. The trend of employment in retail trade in Regina was upward, but in Calgary, Winnipeg, Vancouver and

Victoria there were contractions in employment.

Employment in wholesale trade continued to decline slightly, although in some centres, notably Montreal, nominal improvement was reported.

INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907

Proceedings for the Month of March, with Texts of Boards' Reports

DURING the month of March the Department received reports from two Boards of Conciliation and Investigation established to deal with disputes between (1) the Dominion Power and Transmission Company, Hamilton, and certain of its employees, being linemen, groundmen, etc., members of the Canadian Electrical Trades Union, and (2) the Dominion Power and Transmission Company and the Hamilton Street Railway Company, respectively, and various classes of employees, members of Local 700, International Union of Steam and Operating Engineers, and Divisions 107 and 876, Amalgamated Association of Street and Electric Railway Employees of America. Three applications were received for the establishment of Boards.

Applications Received

During the month of March applications for the establishment of Boards of Conciliation and Investigation were received as follows:

(1) From the employees of various coal operators in Southern Alberta and British Columbia. The employees were members of District 18, United Mine Workers of America, and the employers members of the Western Canada Coal Operators' Association. Provision was made, however, with the various parties concerned, that, if satisfactory to the Board which

might be established to deal with this dispute, employers who were non-members of the Western Canada Coal Operators' Association might be included in the investigation before the Board. A Board was established composed as follows: Mr. W. E. Knowles, K.C., Moose Jaw, chairman, appointed by the Minister in the absence of a joint recommendation from the other two members, Messrs. R. G. Drinnan, Edmonton, and H. Ostlund, K.C., Lethbridge, nominees of the employers and employees respectively. Mr. W. F. McNeill, Calgary, was first nominated by the employers, but later resigned, and Mr. Drinnan was appointed in his stead.

(2) From the employees of members of the Association of Canadian Building and Construction Industries, Ottawa Branch, the employees being members of Local No. 428, International Hod Carriers, Building and Common Labourers' Union of America. A Board was established composed as follows: Mr. D'Arcy Scott, Ottawa, chairman, and Messrs. G. A. Crain and Martin Ryan, Ottawa, nominees of the employers and employees respectively.

(3) From the employees of the Ottawa Electric Railway Company, being members of Division No. 279, Amalgamated Association of Street and Electric Railway Employees of America. This application which was received at the close of the month, was under consideration.

Report of Board in Dispute between the Dominion Power and Transmission Company, Hamilton, and certain of its employees, being linemen, groundmen, etc.

A report was received from the Board established to deal with the dispute between the Dominion Power and Transmission Company, Hamilton, and certain of its employees, being linemen, groundmen, etc., members of the Canadian Electrical Trades Union. The Board was composed of Messrs. J. M. Godfrey, F. H. McGuigan and J. G. O'Donoghue, Mr. Godfrey being chairman. The report of the Board was unanimous and was accompanied by a memorandum of agreement signed by representatives of both parties to the dispute.

Report of Board

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Dominion Power and Transmission Company (employer) and certain of its employees, being linemen, groundmen, etc., members of The Canadian Electrical Trades Union, Hamilton branch, Hamilton, Ontario, (employees).

Toronto, April 3rd, 1922.

To the Honourable James Murdock,
Minister of Labour, Ottawa.

Sir,

The Board first met for organization and consultation at Toronto on February 28th. The various other sessions of the Board were held at the city of Hamilton and the city of Toronto. The employees were represented by J. T.

Gunn, A. Wildy, R. Forsythe and V. Baker. The employers were represented by E. P. Coleman, W. G. Angus and George E. Weller.

The employees applied for an increase of four cents per hour and the company had already put into effect a reduction of the wages amounting to twelve and one-half per cent.

During the several hearings, at the suggestion of the Board, the parties conferred together for the purpose of effecting a settlement. The Board is pleased to report that as a result of these conferences a settlement was agreed upon by the parties.

The settlement is in the terms of the memorandum annexed hereto.

(Sgd.) JNO. M. GODFREY,
Chairman.

(Sgd.) F. H. MCGUIGAN,
Member of the Board.

(Sgd.) J. G. O'DONOGHUE,
Member of the Board.

MEMORANDUM OF AGREEMENT BETWEEN DOMINION POWER AND TRANSMISSION CO. AND CERTAIN OF ITS EMPLOYEES BEING MEMBERS OF THE CANADIAN ELECTRICAL TRADES UNION, HAMILTON BRANCH

Wages and conditions in effect prior to February 15th, 1922, to continue in force for a further period of six months from March 1st, 1922, and thereafter subject to thirty days' notice from either party, this to be retroactive from February 15th, 1922.

(Sgd.) EWDR. P. COLEMAN,

(Sgd.) JAMES T. GUNN.

Report of Board in Dispute between the Dominion Power and Transmission Company and the Hamilton Street Railway Company and various classes of their employees, being street railway workers and steam and operating engineers, etc.

A report was received from the Board established to deal with the dispute between the Dominion Power and Transmission Company and the Hamilton Street Railway Company and various classes of their employees, being street railway workers and steam and operating engineers, etc., members of Local 700, International Union of Steam and Operating Engineers, and Divisions 107 and 876, Amalgamated Association of Street and Electric Railway Employees of America. The Board was composed as follows:

Messrs. J. M. Godfrey, K.C., F. H. McGuigan and Fred Bancroft, Mr. Godfrey being chairman. The report was signed by the chairman and Mr. Bancroft and contained recommendations concerning settlement of the dispute. Mr. McGuigan did not concur in these findings and presented a minority report.

Report of Board

In the matter of Industrial Disputes Investigation Act, 1907, and of differences between The Dominion Power and Transmission Company and Hamilton Street Railway Company and other subsidiary Companies of The Dominion Power and Transmission Company, respectively, and various classes of Employees, members of Local 700, International Union of Steam and Operating Engineers, and Divisions 107 and 876, Amalgamated Association of Street and Electric Railway Employees of America:

Toronto, March 31st, 1922.

To the Honourable James E. Murdock,
Minister of Labour, Ottawa.

Sir:

The Board first met for organization and consultation at Toronto on March 2nd, and public sessions were held in

Hamilton to hear the parties to the dispute on March 3rd, 10th, 11th, 15th and 17th. Several private sessions of the Board were also held in the City of Toronto.

The employees were represented as follows: Division 876, Amalgamated Association of Street and Electric Railway Employees of America, Edgar Vansickle, John Kipling, William Gibson, Frank Cutler, Vernon Bray, Charles Smith and Magnus Sinclair. International Union of Steam and Operating Engineers, Local 700: H. A. Longfellow, H. S. Mitchell, James Blunt, James Smith, A. Keller and A. Anderson. The Hamilton Street Railway employees, including shopmen, (employees of the Dominion Power and Transmission Company) being Division 107 of the Amalgamated Association of Street and Electric Railway Employees of America—Magnus Sinclair, James McIlwraith, William Perrin, David Turnbull, A. T. Rees, W. Allen, J. Walker and J. Ritchie.

The employers were represented by E. P. Coleman, W. G. Angus and George E. Waller.

The Dominion Power and Transmission Company is a holding company owning and controlling the following operating companies: The Hamilton Cataract Power Light and Traction Company, The Hamilton Electric Light and Power Company, The Dundas Electric Company, The Lincoln Electric Light and Power Company, The Welland Electrical Company, The Western Counties Electric Company, The Hamilton Terminal Company, The Hamilton Street Railway, The Hamilton Radial Electric Company, The Lincoln Electric by and Beamsville Electric Railway, Brantford and Hamilton Electric Railway.

As the parties to this dispute are employed by these various companies it would seem impossible to deal with this matter other than as a dispute between The Dominion Power and Transmission Company and its employees.

The dispute has to do almost entirely with the question of wages. There were some minor matters involved which Mr. Coleman, the General Manager, expressed his willingness to adjust. The employees applied for an increase of ten per cent (10%) and the company has put into effect a decrease of from 12% to 13½%. During the several hearings, at the suggestion of the Board, the parties conferred together for the purpose of effecting a settlement. As a result of these conferences the employees abandoned their demands for increases and the company offered to reduce to a certain extent the decreases already in force. The gap, however, between the parties was too great to be bridged by further compromise, and as a result the Board has with regret to report their failure to settle the dispute by conciliation.

In support of the reduction in wages Mr. Coleman presented the position of the company as follows: That the increase of wages in May, 1920, had been made to meet the then high cost of living which had reached its peak in July, 1920, and had since been rapidly receding. That the index figure of the cost of living in May, 1920, was \$26.44, and that this had now fallen to \$21.52, or a decrease of approximately 20 per cent. That the cost of living was now reduced to what it was in 1919 and that the wages should consequently be paid on the same scale as 1919. He further stated that the reduction was necessary to relieve the company from the present serious economic pressure and was essential to the economic safety of the company. That as good business practice the company should set aside 20 per cent of its gross earnings as a fund for maintenance and renewals. That owing to the decrease of net earnings due to increased operating costs the

company had not been able to set aside an adequate amount for maintenance and renewals. That in addition to earning sufficient to pay interest on the bonds, dividends on its preferred stock and an adequate amount for maintenance and renewals, there should be a further substantial surplus to facilitate the necessary financing of the company. That this surplus should amount to at least \$200,000. While Mr. Coleman stated that no dividend had been paid on common stock during the past two years, he did not urge that wages should be reduced so that these dividends could be paid.

The contention of the employees was that they had never received adequate wages. That, even with the increases given, their wages had always been below the prevailing rate in similar industries and were not sufficient to afford them that standard of living to which they and their families are entitled. That it is just as vital to them as it is to the company that their economic security should be maintained.

The Board has taken these various contentions under consideration and recommends as a fair and equitable settlement of this dispute:

1. That the scale of wages paid shall be on the scale set forth in Schedules 1, 2, 3 and 4 hereto annexed.
2. That all other conditions, including rates of pay as to overtime, existing previous to the recent reduction be continued.
3. That where any employee is not mentioned in the above schedules he shall receive pay on the basis of not more than a 4 per cent reduction on the wages he received before the recent reduction.
4. That this award shall become effective on the 5th of April, 1922, and shall continue for one year.

In arriving at these conclusions the Board has practically given effect to the argument presented by Mr. Coleman

and his colleagues, and which has been summarized above.

To set aside 20 per cent of the gross income for maintenance and renewals based on the earnings of 1921 would require a sum of \$751,789. Last year there was spent for maintenance and renewals \$682,999. In order therefore to have kept this fund up to the requirement of 20 per cent of gross income there should have been placed to the credit of this fund a further sum of \$68,790. The statement of the company for 1921 shows, however, that its surplus after paying dividends on preferred stock and all other charges had increased over 1920 by \$131,167. It is evident, therefore, that in 1921 the company could have set aside the entire amount required for maintenance and renewals and still have a surplus of \$62,317.

It is obvious, however, that the company will be in a much stronger financial position in 1922 than 1921. They have recently had an increase in fares granted by the Hamilton City Council and it has been estimated that this will give them increased earnings of \$125,000 after deducting the increased percentages payable to the City. Last year United States exchange cost the company \$59,185. This year there should be a saving on this item of at least \$35,000. The saving to the company by the recommended scale of wages is estimated at \$35,000.

The surplus of the company for 1922 should therefore be:

Estimated surplus based on business of 1921.....	\$ 62,317
Additional revenue from increased fares on Hamilton Street Railway	125,000
Saving on Exchange.....	35,000
Saving by recommended reduction of wages	35,000
	<hr/>
	\$257,317

In view of this statement the company could not be justified in insisting on a further reduction of wages than that recommended in this report which would undoubtedly bring them below

the prevailing rate. It would also seem from the above that the company will probably be able to pay a dividend on its common stock which will give the shareholders a reasonable return on its actual market value which we are informed is \$22 a share.

Mr. Coleman also stated that in his judgment there would be a substantial decrease this year in the business of the Hamilton Street Railway. This of course is an uncertain factor which may or may not affect the position of the company. As against this, however, it was admitted that there should be a substantial saving to the company by reason of the falling prices of materials and supplies.

The first duty of the Board was to endeavour to effect a settlement by conciliation—failing that it was their duty to agree upon a report which should be accepted by reasonable men. Agreement could only be reached by approaching the question in a spirit of compromise. It is earnestly hoped that the parties to this dispute will invoke this same spirit of compromise when making their final decision as between peace and war.

Industrial war always means substantial loss to both the parties no matter what the final result may be.

A further matter which has to be considered by the Board is the reduction in wages put into effect by the company after a Board of Conciliation had been applied for but before the Board had dealt with the matter. The company gave thirty days' notice of reduction in wages to take effect on the 16th day of February and the 1st day of March. Before the time had expired under this notice applications had been made by the employees for a Board of Conciliation to deal with the dispute. Complaint in writing had also been made to the company by the employees that the action of the company was in contravention of Section 57 of the Industrial Disputes Act.

The section referred to is as follows:

"Section 57. Employers and employees shall give at least thirty days' notice of an intended change affecting the conditions of employment with respect to wages or hours; and in the event of such intended change resulting in a dispute, until the dispute has been finally dealt with by a Board and a copy of its report has been delivered through the Registrar to both parties affected, neither of these parties shall alter the conditions of employment with respect to wages or hours, or on account of the dispute do or be concerned in doing, directly or indirectly, anything in the nature of a lock-out or strike, or a suspension or discontinuance of employment or work, but the relationship of employer and employees shall continue uninterrupted by the dispute."

The company, however, refused to recede from its position and the matter was referred to the Minister of Labour. The Minister wrote the company pointing out that its action seemed to be in violation of Section 57. The company, in reply to the Minister, stated that they were acting on legal advice and that there had been no violation of the law.

When the Board convened the company was asked to give its reasons for what seemed to be a violation of the express terms of Section 57. Mr. Coleman stated that the matter had been submitted to their solicitors who advised they were acting within their rights under the authority of a judgment of the Court of Appeal of Nova Scotia in the action of United Mine Workers against the Dominion Coal Co. The Board has given consideration to this decision and are of the opinion that the two cases are distinguishable. It is to be regretted that the company, even if justified by judicial authority should have violated the spirit of this enactment which is for the protection, not only of the employee, but also of the employer.

It is important in industrial disputes that the status quo should be preserved until both parties have had the fullest opportunity of presenting their case.

Having this view the Board recommends that the scale of wages before

the reduction should be paid until April 5th, which we understand is the next pay-day. The employees should therefore be reimbursed in respect of these reductions.

Mr. McGuigan does not concur in this report.

(Sgd.) JNO. M. GODFREY,
Chairman.
(Sgd.) FRED. BANCROFT,
Member of the Board.

Minority Report

In the matter of the Industrial Disputes Investigation Act, 1907, and of differences between The Dominion Power and Transmission Company, Hamilton Street Railway Company, and other subsidiary companies of The Dominion Power and Transmission Company, respectively, and various classes of employees, members of Local 700, International Union of Steam and Operating Engineers, and Divisions 107 and 876, Amalgamated Association of Street and Electrical Employees of America.

Toronto, April 3rd, 1922.

To the Honourable James Murdock,
Minister of Labour,
Ottawa, Ontario.

Careful consideration of the majority report in this case reveals a fair and comprehensive outline of procedure during the hearings of the Board, but the conclusions arrived at by my colleagues are not fully supported by facts, nor entirely in accord with existing conditions. Their cheerful optimism regarding the prospective earnings of these companies in the near future is only possible by entirely ignoring the prevailing Dominion-wide industrial depression, and the established method of providing for a reasonable capital return on investment,—that is, based on a fair value of the property. In this case it was shown in evidence that the property account of approximately \$23,000,000 was based upon a careful survey and conservative appraisal made some fifteen years ago by competent representatives of the bondholders, and that since then there has been added from time to time the amounts of money spent for additions and improvements, which at 5 per cent interest provides \$1,380,000 as the net yearly return necessary to guard against impairment of the capital, to which should be added each year an adequate sum to cover depreciation, maintenance and renewals.

Under ordinary conditions, if 20 per cent of the gross earnings were set aside, it would, no doubt, for a brief period, cover expenditure and maintenance and renewals, but it is absolutely necessary, under present inflated costs and depressed industrial conditions, to provide a safe margin above actual expenses. Years of experience in operating this class of properties have shown that at least 25 per cent of the gross earnings must be set aside for this purpose, and upon this basis the amount for the year 1921 would have been approximately \$250,000, providing about $2\frac{1}{2}$ per cent on that portion of the company's property subject to depreciation, leaving a balance of about \$10,000 for a sinking fund.

The sum necessary for depreciation and reserve fund would require a capital return of about \$1,630,000; the annual statements of these companies for 1921 show net earnings of \$912,659.33 from which must be deducted \$59,185.62 paid for exchange, leaving a balance of only \$353,473.71, or approximately \$777,000 less than the amount which should have been earned, necessary to maintain the stability of the investments. Reference in the majority report regarding the expectation of improved financial conditions in 1922 is decidedly more optimistic than warranted by present conditions. The cost of exchange and materials has undoubtedly decreased, and with them the earnings will no doubt continue to fall until, judging by the past, a bountiful crop next harvest seems assured. Under normal conditions the recent increase in street railway fares would doubtless have shown increased earnings of from ten to twelve per cent, but it was shown in evidence that earnings actually declined more than twelve per cent, or more than sufficient to absorb the expected profits from increased fares.

Although emphasizing prospective earnings, the majority report passes lightly over the vitally important relations of wages to the present cost of living. The company contends that they

must have, and are justly entitled to, relief from the abnormally high wage scale which became effective early in 1920, which was based on the then rapidly increasing high cost of living and the prevailing belief that living costs would continue to increase; but, instead, the cost peak was reached early in July of that year, and continued thereafter to recede as rapidly as it had risen, as is clearly shown in attached blue print diagram. Figures recently published by the Department of Labour show practically the same level at present as during the year 1919, which would seem to fully justify the company's claim that wages should now be reduced to about the 1919 level. In support of this contention I would invite attention to the fact that the two nearest large cities, Toronto and Montreal, have maximum fare of seven cents, while Hamilton's maximum fare is now five cents, or 40 per cent less than these two cities, who pay a higher rate for motormen and conductors. If the present wages were compared on a basis of the present fares, Montreal would be from 25 to 35 per cent below Hamilton, and Toronto 10 to 15 per cent below Hamilton.

However, the problem of greatest importance at this time in this and similar disputes is to find the best and quickest route by which return to normal conditions can be assured as quickly as possible. This, in my opinion, can soonest and only be accomplished by combined efforts of employers and employees to secure a gradual reduction in the cost of all necessities of life and a corresponding reduction in the salaries and wages. This view is based on the understanding that Canada has an industrial productive capacity 25 to 30 per cent in excess of its powers of consumption; therefore, so long as present production and other commodity costs continue at the present abnormal level, it will be impossible to dispose of our surplus in foreign markets, as most of our

manufactures are also produced in Europe at a very much lower cost and sold correspondingly cheaper.

For these reasons, supported by facts and conditions as outlined, much to my regret I am unable to agree with the recommendations of my colleagues. It

gives me pleasure, however, to say that the good-fellowship existing between the officers and employees as evidenced throughout the negotiations, was most gratifying.

(Sgd.) F. H. McGUIGAN,
Representing the Company.

PROCEEDINGS OF THE CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

SEVEN new decisions of the Canadian Railway Board of Adjustment No. 1 have been received by the Department. (Earlier decisions of the Board appeared in the *LABOUR GAZETTE* for February on pages 183 to 185, and in previous issues). Case No. 116 has reference to payment of trainmen acting as conductors on light engines on the Canadian Pacific Railway, Western Lines. Case No. 117 has reference to a disagreement between the Canadian Pacific Railway, Western Lines, and railway conductors and trainmen as to the application of certain articles in the schedule dealing with payment for initial terminal detention. Case No. 118 relates to a controversy between the Esquimalt and Nanaimo Railway and locomotive engineers and firemen as to the application of rates of pay awarded by Supplement No. 15 to General Order N 27. Case No. 119 deals with a controversy between the Esquimalt and Nanaimo Railway and the Brotherhood of Locomotive Firemen and Enginemen as to the rate of pay on consolidated engines. Case No. 120 has reference to the claim of an engineer of the Canadian Pacific Railway, Western Lines, to payment for time while attending Court. Case No. 122 relates to a controversy between the Canadian National Railways, Eastern Lines, and railroad telegraphers as to the responsibility of an agent for the theft of cash from his station. Case No. 123 has reference to a controversy with the Canadian Pacific Railway, Western Lines, as to the application of the Tentative Agreement to baggage and parcel room

employees, other than clerks. No decision had been rendered in Case No. 121.

Case No. 116.—The Canadian Pacific Railway Company (Western Lines) and the Order of Railway Conductors and the Brotherhood of Railroad Trainmen.

A difference existed between the officers of the Canadian Pacific Railway Company, Western Lines, and the Order of Railway Conductors and the Brotherhood of Railroad Trainmen as to the proper interpretation of Article 1, clause (n) of the schedule, which reads as follows: "Trainmen, acting as pilots, or trainmen acting as conductors on engines running light, will receive conductor's pay at through freight rates and under through freight conditions." The company contended that piloting when combined with other service should not be considered a separate performance in any case, and should be paid on basis of service performed, with, of course, the minimum day for the combined service. The employees maintained that compensation for pilots or conductors on engines running light should be paid for as a separate performance in all cases, except where this work is combined with dead-heading service. In the opinion of the Board neither of these contentions was justified, as the Agreement specifically provided that the service stated should be paid "at through freight rates and under through freight conditions." It transpired during the hearing that the particular case on which the question at issue developed was one in which a trainman ran as conductor a distance of 51 miles with a light engine going into

work service, the trainman also going into work service as such. The company paid for 51 miles as conductor, and for the balance of day as trainman in work service, claiming justification for so doing under the schedule agreement. It did not appear to the Board to be reasonable that a claim for twice as much pay for a trainman running with a light engine as for a conductor in charge of a train could be justified. On the other hand the Board did not find any provision in the schedule agreement under which a trainman acting as a conductor could properly be paid less than a minimum day for such service.

The decision of the Board was as follows:

Pay to trainmen acting as pilots, or trainmen acting as conductors on engines running light may be combined with other service to the same extent that pay for trainmen paid under through freight conditions may be combined with other service.

Case No. 117.—The Canadian Pacific Railway Company (Western Lines) and the Order of Railway Conductors and the Brotherhood of Railroad Trainmen.

There was a disagreement between the Canadian Pacific Railway Company, Western Lines, and railway conductors and trainmen as to the application of Article 4, clause (d) second and third paragraphs, and Article 15 of the schedule. These read as follows:

Article 4, clause (d), paragraphs 2 and 3:—“Trainmen shall be paid initial terminal detention for all time required to be on duty prior to the time that train is ordered to leave, and also for all time held at the terminal until the train actually leaves the terminal. Excepting that trainmen required to be on duty fifteen minutes or less prior to the time train is ordered for, shall not be paid initial terminal detention for the first fifteen minutes after the time required to report for duty.”

Article 15:—“When freight crews are called out for any service the full crew will be used, but may be split when required to run sections of passenger trains, except between Revelstoke and Field. Note.—It is agreed as an exception to the above that the Company will have the right to require a member of a crew in any service to bring engine from shop

track to train, and such trainman will be entitled to initial terminal detention from the time he is required to report for duty until the train actually leaves the terminal and shall submit his own wages ticket from the time he reports for duty until his regular time with his crew commences.”

The company declined to pay trainmen for bringing the engine from shop track to train when called to report for duty fifteen minutes or less prior to the time set for the departure of the train, claiming that this work was not included in the exception referred to in Article 4, clause (d). The employees contended that work in connection with the train was not initial terminal detention and that time occupied in bringing the engine from shop track to train should be paid for under the rule and as a matter of fact had been paid for, for several years.

By decision of the Board the claim of the employees was sustained.

Case No. 118.—The Esquimalt and Nanaimo Railway (Vancouver Island) and the Brotherhood of Locomotive Engineers and the Brotherhood of Locomotive Firemen and Enginemen.

There was a disagreement between the Esquimalt and Nanaimo Railway on Vancouver Island, B.C., and its locomotive engineers and firemen as to the application of rates of pay awarded by Supplement No. 15 to General Order No. 27. This supplement was made effective on January 1, 1919, and after reference to the Board an agreement was reached between the Canadian Pacific Railway, Western Lines, and locomotive engineers and firemen as to the application of this supplement in connection with Mountain and Valley differential rates. The men claimed that the management of the company had agreed, on December 3, 1918, to apply on the Esquimalt and Nanaimo Railway the rates of pay, rules and duties applying on the British Columbia division of the Canadian Pacific Railway on lines west of Revelstoke. They stated that the management had agreed to pay the Valley differential rates al-

lowing back time from January 1, 1919, but in doing so, they only applied the differential to a \$5.60 rate instead of the rate of \$5.68, which was the correct rate according to Supplement No. 15 for the engines in dispute on the basis of the weight on drivers.

The company contended that up to very recently they had had limited power owing to the physical condition on the line. It had been the general practice, while adopting certain rates and regulations applied to Valley Territory of the Canadian Pacific Railway, to pay a flat rate on all locomotives, as they claimed that there had been no negotiations or agreements with the engineers changing this method of payment. The company had applied the different increases awarded during the past few years on the flat rate basis, and they alleged that at no time was any arrangement made that the rate should be paid in any other way.

The decision of the Board was as follows:

That the rates payable under the application of Supplement No. 15 to General Order No. 27 should be the same as those effective on the Canadian Pacific Railway, West of Revelstoke, based on weights on drivers.

Case No. 119.—The Esquimalt and Nanaimo Railway (Vancouver Island) and The Brotherhood of Locomotive Firemen and Enginemen.

A controversy arose between the management of the Esquimalt and Nanaimo Railway, Vancouver Island, and its locomotive firemen as to the proper rates of pay on consolidated engines.

The employees claimed that paragraph B of Article 9, Supplement No. 15 to General Order No. 27 preserved the rate which had formerly prevailed on consolidated engines west of Revelstoke on the Canadian Pacific Railway, also the agreement reached December 3, 1918, under which schedules in effect on the Canadian Pacific Railway main line west of Revelstoke should be applied to the Esquimalt and Nanaimo Railway. Therefore, under these rates

the firemen should receive in freight service \$5.03 instead of \$4.79 per hundred miles on oil burners.

The company claimed that this was a freak rate applied to consolidation engines on the Canadian Pacific and perpetuated through some special arrangement, and that there was no justification for extending the unreasonable and unjustifiable rate on this class of engine on the Esquimalt and Nanaimo Railway.

In the opinion of the Board it appeared that the provision of Supplement No. 15 referred to was for the purpose of preserving certain higher rates if previously in effect. Inasmuch, however, as engines of the type mentioned were not in use on the Esquimalt and Nanaimo Railway until after the effective date of Supplement 15, there was not any higher rate for these in effect on that railway to preserve. The Board held that the intent of the Agreement regarding the application of rates paid on the Canadian Pacific Railway would be complied with if the same basic rates were paid in both cases, and did not necessarily involve the payment on one railway of an odd rate specially preserved on the other railways under a specific provision of Supplement 15.

The decision of the Board was as follows:

The rate payable on the engines mentioned shall be based on the rate provided in Supplement 15 to General Order No. 27, for engines having the same weight on drivers.

Case No. 120.—The Canadian Pacific Railway, (Western Lines), and the Brotherhood of Locomotive Engineers.

An engineer of the Canadian Pacific Railway, Western Lines, was subpoenaed to give evidence on behalf of a plaintiff in a lawsuit against the railway for injuries which he had received. It was claimed by the men that this engineer was liable to be subpoenaed on account of performing his duties in accordance with the requirements of the company's service. It was there-

fore claimed that he should be paid for time lost and expenses in accordance with Article 11 of the Agreement.

It was stated on behalf of the company that when this action came on for trial the company's representative asked for an enlargement, which was granted on the understanding that the company would pay the wages of the engineer of the train by which the plaintiff was injured for the days when this engineer was necessarily absent from his duties on account of the enlargement. The engineer was accordingly paid for four days for which he put in time slips. The case came up six days later and was concluded in a day. The Company claimed that any time lost by the engineer beyond the four days which had been paid for were due to his being subpoenaed by the plaintiff and not because of any adjournment, and it was submitted that there was no justification for this claim and that it was not a case in any way covered by Article 11 of the engineers' schedule.

The decision of the Board was as follows:

On the evidence submitted, and with respect to the specific case referred to, the Board decides that the claim of the employees is denied.

Case No. 122.—Canadian National Railways (Eastern Lines) and the Order of Railroad Telegraphers.

On the night of June 17, 1921, a railway station of the Canadian National Railways was broken into and railway cash to the amount of \$23.51 was stolen besides \$50 belonging to the Dominion Express Co. The agent of the company was compelled to make good this loss. The company contended that a rule in Circular No. 57 obliges the agent to carry railway cash on his person when leaving the office if no safe is supplied, and that this rule was not carried out. The employees contended that the insistence of payment under this rule was an injustice, and that the railway should suffer the loss when no proper safe is

provided for the protection of cash or other valuables. In presenting oral evidence, Circular No. 57 issued to agents and cashiers was produced by the railway. This is in part as follows:

(b) Agents having no safes must not allow any money to remain in the cash drawer when they leave the office during the day, and at night, any cash, cheques, or cash vouchers, on hand must be taken home for safe keeping.

It was also stated that some time prior to the loss the agent had stated in a letter to the Auditor of Traffic "that he would observe Circular No. 57 sharply in future."

By the decision of the Board, the claim of the employees was denied.

Case No. 123.—The Canadian Pacific Railway (Western Lines) and the Brotherhood of Railway and Steamship Clerks, Freight Handlers and Station Employees.

In a controversy between certain classes of employees and the Canadian Pacific Railway, Western Lines, the parties failed to reach an agreement with regard to the application of the tentative agreement, and the matter was referred to the Board of Adjustment for decision, both parties agreeing to accept the decision of the Board as final. The difference was with regard to the following points: "(1) The application of the clause of the Tentative Agreement of July 16, 1921, (copy of which is attached) reading: 'Baggage and parcel room employees (other than clerks)... \$20.40,' which is embodied in Article 4, Section 2, Decision 147, Docket 353 of the United States Railway Labor Board, to certain employees in these Departments. (2) The application of that part of the Tentative Agreement providing an 8½ cent per hour reduction to common labourers, or of Section 9, Article 2 of Decision 147, Docket 353 of the United States Railway Labor Board, to certain employees in the Stores Department." The company contended that Section 4, Article 2 of Decision 147, Docket 353 of the

United States Railway Labor Board, covers all baggage and parcel room employees, other than clerks, that these employees were fully covered only by this section, that to agree to the employees' contention would mean the establishment of new differentials that had not heretofore existed, and that the duties of the employees concerned were not such that they regularly devoted fifty per cent or more of their time to clerical work, and consequently they could not be classed as clerks. With regard to the second point, the company stated that on United States railroads stores employees were classified as truckers and labourers, but similar employees on the Canadian Pacific Railway were designated respectively storemen and truckers, the latter being equivalent to labourers on the United States railroads. It was claimed that Decision 147, Docket 353, Section 9, Article 2, covered this class of labourers, whose duties were specifically described in an agreement, effective September 1, 1920, as general labouring work. The representatives of the stores employees being conversant with the classification had signed the agreement providing the 8½ cent increase for the employees concerned. The company now desired to apply the decrease applicable to the employees in the same classification.

The contention of the employees was that only the baggage porters at some of the larger stations were meant to have the \$20.40 per month reduction provided for under Section 1, Article 2, Decision No. 147; that assistant baggage masters and other supervisory forces were provided for in Section 1, Article 2, Decision No. 147, and that checkers, recorders, delivery men, etc., were provided for under Section 2 of the same Article. With regard to the other point, the employees contended that the truckers in the mechanical

stores were included in the classes enumerated in Section 7, Article 2, Decision No. 2, and were entitled to the increase provided under this section. In conformity with this contention, they claimed that the said truckers were covered by Section 7, Article 2, Decision No. 147 and should have received the decrease therein provided for.

In their general statement the Board declared that it was of the opinion "that in connection with the reduction in rates of pay made effective July 16, 1921, the intent of Decision No. 147 of the United States Railroad Labor Board should be applied, the decreased rates specified in this decision having been accepted by all classes of railway employees in Canada." It was further stated by the Board that it was shown that the committee representing the employees had by agreement accepted for truckers the rates of increases specified in Decision No. 2 of the United States Railroad Labor Board as for labourers. It was also shown that the general classification of truckers had been adopted for some years under agreement for the employees concerned engaged in general labour work in and around the stores as well as those specifically engaged as 'store-room' truckers.

The decision of the Board was as follows:

(1) The claim of the employees is denied subject to the conditions mentioned in the general statement.

(2) Truckers in store-rooms and stock-rooms shall receive a decrease of 6 cents per hour from the rates in effect prior to July 16, 1921.

Other employees now classified as truckers should be reclassified as helpers, labourers, or otherwise, and shall receive a decrease of 8½ cents per hour from the rates in effect prior to July 16, 1921.

This re-adjustment of classification and of rates shall be effective from the beginning of the next pay period, namely, April 1, 1922.

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1922

ONE strike, involving 18 workpeople was reported as having commenced during March. There were in existence at some time or other during the month 19 strikes, involving 2,309 workpeople and an estimated time loss of 58,943 working days, as compared with 25 strikes, involving 2,431 employees and 63,590 working days in February, 1922; and 32 strikes, 3,468 workpeople and 55,502 working days in March 1921. The time loss occasioned by the one new strike which began in March was 486 working days, while a loss of 58,457 working days is charged to the 18 strikes which commenced prior to March. Two of the strikes commencing prior to

March terminated during the month, leaving the following 17 strikes, affecting 2,159 workpeople on record on March 31: sheet metal workers, Toronto; employees of steel and coal companies, Sydney; gauge men, Sydney; compositors, Montreal; compositors, etc., Vancouver; photo engravers, Montreal; photo engravers, Ottawa; printers, Montreal; printers, Ottawa; printers, Toronto; printers, Winnipeg; printers, bookbinders, pressmen, etc., Halifax; typesetters, pressmen and bookbinders, Hamilton; clothing workers, Montreal; garment workers, Montreal; waiters, Toronto; and waiters, Hamilton.

Disputes by Industries.

The following is a review of disputes by industries in the order in which they appear in the statistical table. A brief summary is given of the more important strikes.

BUILDING AND CONSTRUCTION.—In this group, the strike of sheet metal workers at Toronto remained unterminated at the end of the month. This strike was a part of the building trades strike which commenced on January 2. The other trades involved—plasterers and plasterers' labourers—settled on February 13.

PRINTING AND PUBLISHING.—Eleven strikes, involving 1,775 employees, with an estimated time loss of 45,625 working days, represented the standing in this group for the month. The printers who were on strike in Quebec resumed work on March 6 on the basis of the 48-hour

week together with an increase of \$3 per week. The strikes for the 44-hour week still remained unterminated in Halifax, Montreal, Ottawa, Toronto, Hamilton, Winnipeg and Vancouver. Some of these disputes had been in existence for nearly a year.

CLOTHING.—The strike of tailors at Charlottetown, which commenced on January 16, was terminated on March 7, leaving three strikes still in existence at the end of the month, two of these being in Montreal.

MISCELLANEOUS. — There were two strikes of waiters in Toronto and Hamilton. The strike in Toronto, which commenced on February 27, was in protest against the employment of waitresses. In Hamilton, the waiters in one hotel

went on strike on March 1 in sympathy with the strikers in Toronto. Both strikes were un-terminated at the end of the month.

STRIKES AND LOCKOUTS DURING MARCH, 1922.

Industry or occupation	Particulars	No. of employees affected	Time loss in working days
Strikes Commencing Prior to March, 1922.			
MINES, SMELTERS, QUARRIES, CLAY PRODUCTS, ETC.:—			
Coal miners, Drumheller, Alta.....	Commenced December 22. Against a reduction in wages. Information received indicates employment conditions no longer affected.		
Coal miners, Drumheller, Alta.....	Commenced February 22. In protest against reduction in contract mining rates. Information received indicates that this company has closed down its mine indefinitely.		
BUILDING AND CONSTRUCTION:—			
Sheet metal workers, Toronto, Ont.	Commenced January 2. Against a reduction in wages. Un-terminated.	100	2,700
METALS, MACHINERY AND CONVEYANCES:—			
Employees of steel and coal companies, Sydney, N.S.	Commenced November 22, 1920. For increased wages and improved working conditions. Un-terminated.	150	4,050
Gauge men, Sydney, N.S.....	Commenced June 9. In sympathy with employees of the steel and coal companies. Un-terminated.	16	432
PRINTING AND PUBLISHING:—			
Compositors, Montreal, Que.	Commenced June 14. Objection of men to perform work that came from shop where strike existed. Un-terminated.	25	675
Compositors, etc., Vancouver, B.C...	Commenced May 2. For increased wages and 44-hour week. Un-terminated.	39	1,053
Photo engravers, Montreal, Que....	Commenced May 2. For shorter hours. Un-terminated.	30	810
Photo engravers, Ottawa, Ont.....	Commenced May 2. For increased wages and 44-hour week. Un-terminated.	10	270
Printers, Montreal, Que.....	Commenced July 1. For increased wages and 44-hour week. Un-terminated.	370	9,990
Printers, Ottawa, Ont.....	Commenced June 1. For increased wages and 44-hour week. Un-terminated.	105	4,455
Printers, Quebec, Que.	Commenced February 15. For increased wages and 44-hour week. Settled by negotiations; work resumed March 6.	100	400
Printers, Toronto, Ont.....	Commenced June 1. For increased wages and 44-hour week. Un-terminated.	853	23,031
Printers, Winnipeg, Man.	Commenced July 1. Alleged lockout following refusal of employers to renew agreement. Un-terminated.	131	3,537
Printers, bookbinders, pressmen, etc., Halifax, N.S.	Commenced May 2. For shorter hours. Un-terminated.	42	1,134
Typesetters, pressmen and bookbinders, Hamilton, Ont.	Commenced May 2. Alleged violation of agreement by employers. Un-terminated.	10	270
CLOTHING:—			
Clothing workers, Montreal, Que....	Commenced February 17. In protest against a change in working conditions. Un-terminated.	60	1,620
Garment workers, Hamilton, Ont....	Commenced February 23. In protest against an alleged reduction in wages. Information received indicates employment conditions no longer affected.		
Garment workers, Montreal, Que....	Commenced December 19. Against increase of working hours and employment of non-unionists. Un-terminated.	90	2,430
Tailors, Charlottetown, P.E.I.....	Commenced January 16. Against a reduction in wages. Settled by negotiations; work resumed March 7.	30	250
MISCELLANEOUS:—			
Waiters, Toronto, Ont.	Commenced February 27. In protest against the employment of waitresses. Un-terminated.	50	1,350
Strikes Commencing During March, 1922.			
MISCELLANEOUS:—			
Waiters, Hamilton, Ont.....	Commenced March 1. In sympathy with the waiters on strike in Toronto. Un-terminated.	18	486

STRIKES AND LOCKOUTS IN THE UNITED KINGDOM DURING FEBRUARY, 1922

THE following details with regard to strikes and lockouts in the United Kingdom during February, 1922 based on returns from employers and workpeople, are taken from the March issue of the British *Labour Gazette*.

NUMBER, MAGNITUDE AND DURATION.—

The number of trade disputes involving a stoppage of work, reported to the Department as beginning in February, was 66, as compared with 57 in the previous month, and 63 in February, 1921. In these new disputes about 18,000 workpeople were directly involved, and 3,000 indirectly involved (i.e., thrown out of work at the establishments where the disputes occurred, though not themselves parties to the disputes). In addition to the numbers involved in new disputes, about 12,000 workpeople were involved, either directly or indirectly, in 49 other disputes which began before February and were still in progress at the beginning of that month. The total number of new and old disputes in progress in February was thus 115, involving about 33,000 workpeople, and resulting in a loss during February of about 316,000 working days.

CAUSES.—Of the 66 new disputes, 40, directly involving about 10,000 workpeople, arose out of proposed reductions in wages; 12, directly involving 4,000 workpeople, on other wages questions; 2, directly involving 2,000 workpeople, on questions as to working hours; 7, directly involving 1,000 workpeople, on questions respecting the employment of particular classes or per-

sons; and 5, directly involving 1,000 workpeople, on other questions.

RESULTS.—During February settlements were effected in the case of 30 new disputes, directly involving about 4,000 workpeople, and 21 old disputes, directly involving about 6,000 workpeople. Of these disputes, 5, directly involving 1,000 workpeople, were settled in favour of the workpeople; 27, directly involving 4,000 workpeople, in favour of the employers; and 19, directly involving 5,000 workpeople, were compromised. In the case of 7 disputes, directly involving about 2,000 workpeople, work was resumed pending negotiations.

The following table classifies the disputes by groups of trades, and indicates the number of workpeople involved (whether directly or indirectly) at the establishments concerned and the approximate time lost during February in all the disputes in progress:—

Groups of Trades	Number of disputes in progress in February			Number of workpeople involved in all disputes in progress in February	Aggregate duration in working days of all disputes in progress in February.
	Started before February 1.	Started in February.	Total.		
Building	6	12	18	2,000	21,000
Mining and quarrying	11	9	20	13,000	123,000
Metal, engineering and shipbuilding	8	9	17	6,000	41,000
Textile and clothing..	3	5	8	1,000	20,000
Transport	3	11	14	4,000	46,000
Food, etc., trades.....	4	2	6	2,000	25,000
Other trades	12	11	23	3,000	30,000
Employees of public authorities	2	7	9	2,000	5,000
Total, February, 1922	49	66	115	33,000	316,000
Total, January, 1922	36	57	93	18,500	184,000
Total, February, 1921	49	63	112	44,000	758,000

ANNUAL CONVENTION OF THE NEW BRUNSWICK FEDERATION OF LABOUR

THE annual convention of the New Brunswick Federation of Labour was held at Moncton on February 14 to 16 under the presidency of Mr. J. E. Tighe. About 60 delegates, including two ladies, were in attendance.

The secretary reported receipts for the year of \$887.87, including a balance of \$308.45 from the previous year; the expenditures were \$661.03 and the balance on hand \$226.84.

The executive reported that the provincial government had on February 9, 1921, promised consideration of the legislative programme of the last convention. Two members of the executive had been asked to act on a commission to consider legislation on the minimum wage and mothers' allowances. About May 1, a committee had visited the New Brunswick hydro-electric works at Musquash and had found that in their opinion wages were too low and board excessively high. As a result of their investigation the manager promised to reduce the board from \$8 to \$7 per week, but stated that if wages had to be increased some of the men would have to be replaced by machinery, so the wage matter was not pressed.

Among the proposals submitted to the convention were resolutions requesting the provincial government to pass minimum wage laws for women and children, and a mothers' pension or allowance law; requesting the provincial government to amend the New Brunswick Electric Power Commission Act of 1920 to make it unlawful for either the New Brunswick Electric

Power Commission or any municipality being supplied by the Commission to sell such power to any private person or corporation for distribution for profit; requesting the provincial government to amend the Workmen's Compensation Act to provide that in case of death payments to widows and children dependents be paid \$30 and \$7.50 per month respectively, and adequate minimum monthly payments be established, and to amend the act to provide a minimum weekly indemnity in case of accident of not less than \$10; requesting that representation be made by the Minister of Labour to the management of the Canadian National Railways that on all public work undertaken by the Canadian National Railway system the hours prevailing and rate of wages of the locality at the time shall be the standard; requesting that white girls be prevented from being employed where there are employees of the yellow race; and requesting that master plumbers desiring to do business in New Brunswick be compelled to undergo examination in their particular line of work, and that all journeymen plumbers be licensed and compelled to undergo examination under a provincial sanitary engineer. Other resolutions were adopted protesting against the exportation of Canadian goods through foreign ports, and urging that more protection be given labourers on staging and hoisting jobs, and that Section 28 of the New Brunswick Health Act governing the storage of foodstuffs for sale be enforced. The convention condemned the system of governing the

crown lands by commission, believing that the representatives of the people should control and appoint the employees of the people. The convention requested the incoming executive to endeavour to secure legislation respecting mothers' allowances and a minimum wage for women and to safeguard the existing compensation law while endeavouring to secure improvements to same. It also requested that organized workers having interest in co-operative stores see that these handle union label

products insofar as they can do so without financially embarrassing their organization. Chatham, N.B. was chosen as the place for the next convention.

The officers elected for the ensuing year were: president, J. E. Tighe, St. John (re-elected); first vice-president, Charles Cameron, Moncton; second vice-president, Daniel Cripps, Chatham; third vice-president, Miss Lettie Glover, Milltown; secretary-treasurer, George R. Melvin, St. John.

THE COAL STRIKE IN THE UNITED STATES

ON April 1, a general strike of coal miners took place in the United States. There were directly affected over 400,000 workers in bituminous mines, and about 150,000 workers in anthracite mines in Pennsylvania, who were members of the United Mine Workers of America. About 13,000 union men remained at their posts to protect the mines from damage.

The strike took place on the expiration of an agreement signed on March 31, 1920, by representatives of operators and mine workers of the Central Competitive Field, which includes Western Pennsylvania, Ohio, Indiana, and Illinois. This agreement was reached at the instance of a Commission appointed by President Wilson in December, 1919, to settle a dispute in the bituminous coal fields of the United States. The agreement provided among other things that prior to April 1, 1922, there should be held an interstate joint conference, the time and place of meeting to be fixed by a committee of two operators and two miners from each state in which there were parties to the agreement, together with the international officers of the United Mine Workers of America. An attempt was made to arrange for the holding of the preliminary meeting on January 6, but the operators failed to take any steps to name their representatives on the

committee, or to make any other arrangements to arrive at a collective agreement. While certain individual operators were willing to arrange a settlement with the Union, the men refused, as they preferred to have one agreement covering the entire Central Competitive Field, the rates of pay at other mines being adjusted on the basis of this agreement.

On January 17, the anthracite miners at a convention held at Shamokin, Pa., drew up a proposed wage schedule, the principal features of which were a 20 per cent increase in the contract wage scale and an advance of one dollar per day for all datal men. This schedule was endorsed on February 18 at a convention of the United Mine Workers of America at Indianapolis, an account of which appeared in the March issue of the LABOUR GAZETTE on pages 307 and 308. The bituminous miners at that convention decided to hold out for the maintenance of existing wage scales and against the demands of the operators for the abolition of the check-off and a reduction of from 25 to 40 per cent. The convention passed a resolution with regard to the hours of labour which contained the following clause: "The present eight-hour day is merely theoretical, the mine workers being compelled to spend greatly in excess of eight hours in the

mines. We hold that eight hours out of twenty-four is the maximum amount of time any mine worker should be required to spend underground. We therefore recommend that all new agreements be based upon a six-hour day, five days per week."

A policy committee of 117 members created by the convention "for the purpose of meeting in a practical way all unforeseen emergencies which may arise" subsequently met in Cleveland to arrange a nation wide coal strike to

start on April 1. A referendum of the members of the United Mine Workers was taken with regard to the cessation of work and it was stated by officers of the Union that 90 per cent of the membership were in favour of a discontinuance of operations.

When the strike began it was estimated that the stock of anthracite coal on hand was sufficient for about two months full supply and that there was about three months' supply of bituminous coal.

COMMERCIAL STOCKS OF COAL IN THE UNITED STATES

An estimate of the amount of the commercial stocks of anthracite and bituminous coal in the United States on March 1 was recently made in a report prepared jointly by the Bureau of Census, Department of Commerce, and the United States Geological Survey, Department of the Interior.

BITUMINOUS COAL

It was found that on March 1 consumers had in storage approximately 52,500,000 tons of soft coal. This figure does not include coal in the cellars of domestic consumers, concerning which statistics are not available; neither does it include fuel for steamships, or coal on the docks at the head of the Great Lakes, which is classed as coal in transit. At the rate of consumption and exports prevailing in January and February, namely, 8,150,000 tons per week, the reserve on March 1 was calculated as sufficient to last for forty-three days, assuming that all consumers had stocks in similar proportion to the amount they consumed. This assumption, however, cannot be made with certainty, since in every community there are consumers who store virtually no coal. In estimating stocks available for consumption it must further be remembered that a certain minimum stock must be held in reserve at each plant in order

to ensure its steady operation. In 1920, for instance, stocks fell to 20,000,000 tons, a figure below the necessary minimum, with the result that the market was seriously disturbed. In addition to the 52,500,000 tons held by consumers on March 1, considerable quantities were either in transit or were held in storage by the producers either at the mines or at intermediate points. For instance, about 5,160,000 tons were reported on the Upper Lake docks, while at least 674,000 tons were in the producers' stores. Another factor to be considered in estimating the above-ground reserve of fuel is the amount of the stocks of unsold coke at the by-product coke plants. The quantity of such coke remaining on March 1 was estimated at about one million tons, most of which could be used for household fuel.

Basing their calculations on the stocks in existence on March 1, the investigators estimated that the reserves on April 1 amounted to 63,000,000 tons, the rate at which coal left the mines in recent weeks having been more rapid than in the previous month. In this connection it is noted that between the production of coal at the mine and its delivery to the consumers there is a "lag" which averages perhaps two weeks. Thus on April 1 it was assum-

ed that the 46,000,000 tons started on its way from the mines between February 15 and March 15, had reached its destination, and a few millions of tons have been added to the stock piles.

ANTHRACITE COAL

The stocks of anthracite held by consumers cannot be estimated so fully as the bituminous stocks. Production during the first two months of the year was slightly below normal. No statistics are available concerning the amount of anthracite in the cellars of householders, but domestic consumers have recently been slow to buy, and must therefore have less in hand than usual. Retail coal dealers' stocks on March 1 were about the same as a year ago, and much larger than in 1920 or 1919. Reports from 642 dealers, estimated to

handle one-fourth of the total business in domestic anthracite, reported 1,169,180 net tons in hand on March 1. The amount of anthracite in transit is considerable. Upper Lake docks held 821,448 net tons on March 1. The quantity in cars at tidewater piers and at the New England gateways on March 1 was about normal.

Producers' stocks have not been estimated since November 11, 1921, when 4,487,000 tons were reported as held in storage, of which 1,768,000 tons were of domestic and 2,719,000 of steam sizes. At the beginning of the year a slight increase was noted in the domestic and a slight decrease in the steam coal. For the first three weeks of March production was at the rate of 7,800,000 net tons a month.

DISABLEMENT COMMISSION OF THE INTERNATIONAL LABOUR OFFICE

AT the eleventh session of the Governing Body of the International Labour Office held in January, a commission of experts was appointed for the study of questions concerning disabled men. The commission was composed of six experts nominated by agreement with the most important associations for the disabled in France, Great Britain, Italy, Germany, Austria, and Poland; four experts from Government departments in France, Great Britain, Italy and Germany; and one representative each from the Health section of the League of Nations, the League of Red Cross Societies, the International Red Cross Committee and the Permanent Inter-Allied Committee of the Disabled. The following agenda was also approved:—(1) The formation of a plan for the organization of an international prosthesis exhibition, that is an exhibition of artificial limbs and other means of supplying deficiencies. (2) The study of the administrative or-

ganization of prosthesis in different countries. (3) The study of the administrative organization of medical aid available for the disabled in different countries.

The first session of the commission was held at Geneva on March 2-4 when resolutions were passed in which the following general conclusions were agreed upon:

(a) The great progress accomplished in each country as regards artificial limbs and orthopaedic treatment is not sufficiently known in other countries, and it is urgently necessary that full and accurate information on these subjects should be generally diffused.

(b) Legislation concerning industrial accidents should be amended in such a way as to allow men disabled in industry to receive artificial limbs and orthopaedic and medical treatment for an unlimited period.

(c) Disabled men living in countries other than their own should be provided with artificial limbs and orthopaedic and medical treatment.

In order to put their conclusions into effect the experts requested the International Labour Organization (1) to undertake the organization of a centre for the supply of information and an institution for scientific research and an international exhibition of artificial limbs and orthopaedic instruments; (2) to include in the 1923 budget the sum of 50,000 francs which they consider requisite for the above mentioned work. They also considered that it was urgently necessary to provide artificial

limbs and medical treatment for disabled men domiciled in countries other than their own, and that it would be desirable to provide protection of this kind by international convention, and until such a convention is concluded there should be conventions for this purpose between states. The International Labour Office was requested to communicate these conclusions to all governments, to supply the governments with any information which might facilitate the conclusion of agreements, and to do everything in its power to ensure that all such conventions should conform to the principles unanimously agreed upon by the experts as the most desirable.

RECENT LABOUR LEGISLATION IN QUEBEC

THE third session of the fifteenth legislature of the Province of Quebec opened on January 10 and closed on March 21, 1922. In accordance with the intimation given by Premier Taschereau to a labour delegation on the eve of the session, there was little important legislation directly affecting labour, but a number of measures of general social interest were passed. These measures included acts establishing a Provincial Bureau of Health and a Bureau for the Maintenance and Repair of Roads, and several acts for the reorganization of the system of public education and for the promotion of higher education.

The Mining Act was amended in respect to the employment of boys on working machinery in mines. Previously no boys could be employed on mine machinery except in connection with machinery put in motion by horses or other animals, in which case the driver might be of the age of sixteen years. The new amendment provides that "no male person under 20 years of age shall be employed, to have charge of hoists or windlasses used for hoisting or lowering workmen in mines or in workings

connected therewith. No male person under 18 years of age, employed in mines, quarries, or in immediate connection therewith, shall have charge of machinery of any kind used for hoisting, for lifting, for haulage, or for drilling blasting holes. The transmission of signals and orders for putting such machines in motion shall not be entrusted to persons under the full age of 16 years."

By an amendment to the Quebec Election Act the hours for polling were extended from five to six o'clock in the afternoon of election days.

The new Bureau established under the Provincial Bureau of Health Act will take control of the existing public health service, and report annually to the Legislature. It will consist of a director, an inspector-in-chief, and a secretary, together with analysts, a sanitary engineer, a statistician, inspectors, and other officers, all to be appointed by the Lieutenant Governor-in-Council. Under the control of the Provincial Secretary the Director will exercise authority over the officers of the Bureau, the existing Board of Health, and municipal sanitary authorities. His

staff will make a study of medical and vital statistics, make, or cause to be made locally, investigations into the causes of disease; superintend the formation of local boards of health; and give instruction to officials and to the public in matters relating to public health. The new inspector-in-chief will have general control of sanitary inspection throughout the Province. The Board of Health will consist of eight members composed of the three chief members of the new Bureau, and five medical doctors of five years' practical experience. This body will make recommendations to the Lieutenant Governor-in-Council in regard to the sanitary regulation of houses, dairies, slaughter-houses, places where food is stored, as well as of industrial establishments. In regard to such establishments the Board will make recommendations relating to the supply of drinking water, lighting, the distance to be left between certain establishments and dwelling houses, as well as arrangement and construction, cubic space, ventilation, cleanliness, disposal of dust, gas, and waste, drainage, temperature and general sanitary conditions.

Among the educational acts may be mentioned one to encourage the production of literary or scientific works by means of annual competitions with prizes supplied from a Provincial grant. Another measure authorizes the establishment of vocational courses in any school municipality, and provides for special annual provincial subsidies. The preamble to this act refers to the increasing need for such courses for the direct training of technical workmen or competent employees in industry, commerce and agriculture. The courses will be under the control of the school boards, commissioners or trustees, who will be required to pay for the maintenance of vocational courses an amount equal to the Provincial subsidy. This condition, however, may also be met by the payment of an equal amount by corporations, companies, or individuals. Previous laws governing the submis-

sion of money by-laws will not apply to by-laws issued by municipal corporations for the purpose of acquiring the right to receive the special subsidy. A Provincial officer will supervise and inspect vocational training, and the appointment of teachers must also meet with the approval of the Provincial authority.

Among the appropriations for educational purposes made by the Legislature was the sum of \$38,000 for gratuities for teachers of ten, fifteen, and twenty years' standing.

Other measures passed at the late session included an act to amend the Motor Vehicle Act in regard to the registration of commercial and other motor vehicles, and their use upon public thoroughfares; an act amending the Provincial Police Act respecting the constitution, duties and discipline of the force; and an act amending the law relating to Civil Engineers in regard to qualifications of candidates.

The Legislature decided, in view of the advantages likely to result to the farming industry from organized rural credit, to appoint a special committee to inquire into the various credit systems elsewhere existing or proposed, and to study their probable economic effects if adopted in Quebec. This committee will sit during the recess and report at the next session of the legislature.

The following resolution was passed by the Legislature by a vote of 34 to 4. "That this House, recognizing that Canadian labourers are one of the sanest elements of our population, invite the labour organizations of this Province to give themselves a constitution which will be essentially Canadian, and to continue to co-operate in the industrial development of the Province in an orderly manner and while having respect to our laws." The foregoing resolution was in the form of an amendment to a resolution in favour of legislation to compel all labour organizations to become incorporated, and "more strictly enforce laws against strikers who resort to violence."

LABOUR AND WAGES IN VARIOUS INDUSTRIES IN CANADA

Reports by Dominion Bureau of Statistics on (a) Lumbering Industry, 1920; (b) Meat Industry, 1920; (c) Automobile Industry, 1920; (d) Furniture Industry, 1920; (e) Brush and Broom Industry, 1920.

THE Dominion Bureau of Statistics has recently issued preliminary reports for the calendar year 1920 on the lumbering industry, the meat industry, the automobile industry, the furniture industry, and the brush and broom industry. Previous reports in this series relating to other industries have been outlined in the March issue of the LABOUR GAZETTE and in various other issues.

The Lumbering Industry during 1920

The statistics of the lumbering industry in Canada during 1920 are based on returns from 925 plants engaged in logging operations, and 3,481 sawmills.

The total capital invested in this industry in 1920 was \$234,793,646, of which sum the investment in mill operations was nearly \$200,000,000, and a capital of over \$35,000,000 was invested in forest operations. In 1919 the total capital invested in the industry stood at \$231,203,247.

The following table shows the number of persons employed in lumbering during 1920 by provinces, salary and wage payments. Compared with 1919 the number of persons employed increased by 5,048 or 7 per cent, and the amount paid in salaries and wages increased by \$23,470,392, or 38.5 per cent.

The total days that mills were in actual operation, the total days that men were employed in woods operations, the hours worked per day and per week are shown by provinces and for the Dominion in the following table. The aver-

age actual time of operation was 96 days in mills and 162 days in the woods, the average hours per day 9.5 in the mills and 9.0 in the woods, and per week 56.3 in the mills and 54.8 in the woods:—

Provinces	In Mills				In Woods

The Meat Industry in Canada during 1920

An advance report on the meat industry in Canada has been issued by the Dominion Bureau of Statistics. The number of individual plants covered by the report was 86, the number by provinces being as follows:

Ontario	29	British Columbia	6
Quebec	16	Prince Edward	
New Brunswick.	9	Island	6
Manitoba	8	Saskatchewan ..	3
Alberta	7		
		Total	86

The value of production in the industry increased from \$233,936,913 in 1919 to \$240,544,618 in 1920. The largest business was done in fresh beef, of which there was sold 297,297,935 lbs. with a selling value at the plant of \$55,239,777. Bacon and sides came next with a production of 96,128,042 lbs. valued at \$36,772,497. The total capital invested in this industry was \$84,288,306, a decrease of \$9,075,485 compared with 1919, accounted for by reductions in the items of working capital, such as materials on hand, cash, trading accounts, etc., fixed capital having increased by \$1,023,487.

The number of employees of different

classes, by sex, and the amount paid in salaries and wages is shown in the following table:

	No. of employees		Salaries and wages
	Male	Female	
Officers, superintendents, managers,	353	1	\$ 1,487,895
Clerks, typists, etc.	2,055	542	3,723,383
Employees on wages. average No.	8,429	598	11,480,693
Totals	10,837	1,141	\$16,691,471

A classification of employees according to weekly wage payments within specified groups is given below:

Specified wage groups	Over 16 years		Under 16 years		Total employees
	Male	Female	Male	Female	
Under \$5 per week	9	1	10
\$5 to under \$10 per week	71	67	10	148
\$10 to under \$15 per week	253	245	17	2	517
\$15 to under \$20 per week	604	227	2	1	834
\$20 to under \$24 per week	1,426	25	1,451
\$24 to under \$28 per week	3,224	1	3,225
\$28 to under \$30 per week	857	857
\$30 per week and over ...	1,768	1,768
Totals	8,212	566	29	3	8,810

The following is a summary of the principal statistics of the industry by provinces:

	No. of Plants	Capital	Employees		Cost of materials	Value of products
			No.	Salaries Wages		
		\$		\$	\$	\$
CANADA	86	84,288,306	11,978	16,691,471	170,916,888	240,514,618
Alberta	7	8,490,363	1,309	2,059,425	117,226,033	23,265,841
British Columbia	6	2,987,726	380	531,019	10,506,252	12,033,029
Manitoba	8	6,842,063	1,264	1,832,610	17,043,948	26,822,930
New Brunswick & Nova Scotia	{9 2	396,162	74	76,820	881,492	1,098,224
Ontario	29	49,596,862	6,586	9,149,550	97,092,566	138,713,947
Prince Edward Island	6	3,410,343	74	61,442	1,114,469	1,336,889
Quebec	16	13,071,862	1,898	2,388,096	22,790,296	29,496,537
Saskatchewan	3	2,492,923	393	392,509	4,261,832	7,777,221

The total working time of plants in 1920 amounted to 22,680 days on full time and 1,652 on part time, an average of 283 days per plant. The average working time per day or per shift was 8.8 hours, and the average per week was 51.3 hours.

The Automobile Industry in Canada during 1920

Preliminary statistics of the automobile industry for 1920 issued by the

	1919	1920
Automobile manufacturing..	\$80,619,846	\$101,465,846
Automobile supplies and accessories	8,571,890	19,361,882
Automobile repairs	12,004,970	16,592,623
Totals	\$101,196,706	\$137,420,351

Dominion Bureau of Statistics show a continued expansion of this industry. The accompanying table shows the value of production by classes of plants for the calendar years 1919 and 1920.

The following tables give the principal statistics of the automobile industry by provinces during 1920:

	Automobile Plants

Totals	9,005	695	10,236,576	535	52	696,888

In the following table employees are classified by age and sex according to weekly earnings, the wage rates being taken as in effect on December 15, 1920:

Specified wage groups	Manufacturing					Upholstering and repairs		
	Over 16 yrs.		Under 16 yrs.		Total empl.	Male	Female	Total employees
	Male	Female	Male	Female				
Under \$5 per week	8	5	11	1	25	6*	6
\$5 but under \$10	339	67	81	12	499	47	6	53
\$10 but under \$15	1,001	205	44	6	1,256	69	16	85
\$15 but under \$20	1,530	75	1,605	70	11	81
\$20 but under \$24	1,511	4	1,515	53	3	56
\$24 but under \$28	1,241	4	1,245	56	1	57
\$28 but under \$30	380	380	18	18
\$30 and over	859	1	860	158	158

*Includes 1 male under 16 years.

The total working time of manufacturing plants amounted to 44,584 days on full time and 3,876 days on part time, an average of 290.1 days per establishment. In upholstering and repair plants, the respective totals were 41,666 days on full time and 2,217 days on part time, an average per establishment of 286.6 days. The average hours worked per day and per week, in the manufacturing plants were 9.1 and 52.1 respectively, and in the upholstering and repair plants, 8.6 and 50.0 respectively.

The Brush and Broom Industry in Canada during 1919 and 1920

An advance report on the brush and broom industry in Canada for the calendar year, 1920, with comparative figures for 1919, contains statistics of 78

separate establishments, which produced articles to the value of \$4,284,915 in 1919 and \$4,680,985 in 1920. Comparative statistics for 1919 and 1920 for the various parts of Canada are given in the following table:

Provinces	Establishments	Capital	Employees	Salaries and wages
1919	No.	\$	No.	\$
Ontario	47	1,720,735	745	671,272
Quebec	19	331,994	164	108,044
British Columbia ..	3	91,365	50	50,650

Prairie provinces ..	3	22,147	17	22,032
Maritime provinces ..	3	1,014,180	364	254,958
Canada	78	3,780,252	1,371	1,212,541

The following table shows the number of employees by classes and the amounts paid in salaries and wages in 1920:

Classes of employees	Number of employees		Salaries and wages
	Male	Female	
Officers, superintendents managers	72	1	\$181,387
Clerks, stenographers, etc.	79	56	208,243
Wage earners, average number	846	306	822,026
Outside piece workers....	3	8	885
Totals	1,000	371	\$1,212,541

In the following table, the employees are classified according to specified groups of weekly wage earners and their age and sex:

Specified wage groups	Over 16 yrs.		Under 16 yrs.		Total employees
	Male	Female	Male	Female	
Under \$5 per week	6	2	3	11
\$5 to under \$10 per week	106	177	8	2	293
\$10 to under \$15 per week	151	107	10	1	269
\$15 to under \$20 per week	196	18	214
\$20 to under \$24 per week	147	3	150
\$24 to under \$28 per week	104	104
\$28 to under \$30 per week	25	25
\$30 per week and over	70	70
Totals	805	307	21	3	1,136

The total working time of establishments in 1920 amounted to 20,177 days on full time and 644 days on part time, an average of 267 days per establishment. The average working time per day or per shift was 8.8 hours, and the average per week was 50.7 hours.

MINIMUM WAGES FOR FEMALE TELEPHONE OPERATORS IN ONTARIO

REGULATIONS governing the wages paid to female telephone operators were issued during March by the Ontario Minimum Wage Board, and become effective on May 15, 1922. These regulations establish various rates according to the status of the employees and the population of the communities served, the urban centres being divided into categories as shown in the following table. In the more sparsely populated districts throughout the Province the minimum wage rates are based upon the number of subscribers connected with the exchange, subscribers being counted by subscriber station, and extension sets on the same premises being excluded. For exchanges having less than 200 subscribers no rates are enjoined.

Inexperienced female employees over 18 years of age are considered experienced after one year, and young girls under 18 years after two years' service. If, however, a young girl should pass the age of 18 before completing this two years' training, the schedule rates will continue till the two training years are completed, but in no case is she to receive less than the wages prescribed for an inexperienced adult of her own age. In exchanges situated in communities of population under 4,000 no distinction is made between inexperienced employees over and under 18 years, the training period for both these classes being limited to one year.

Part time payment is to be calculated upon the proportion of the number of hours worked in any week to the number of hours in the normal weekly work

period at the exchange. Violations of the orders are punishable under the act (section 22) by a fine not exceeding \$500 and not less than \$50 for each employee affected, the employer being also required to pay to such employee the

amount by which her wages fell short of the prescribed minimum. Each establishment affected by these regulations is required to keep a copy posted up in a position in which it can be readily seen by the employees.

MINIMUM WAGES FOR FEMALE TELEPHONE OPERATORS IN ONTARIO

Classes of employees	In Toronto	In cities of 30,000 population or over (excepting Toronto)	In cities and towns having from 10,000 to 30,000 population.	In cities and towns having from 4,000 to 10,000 population.	Throughout the Province except in urban population of 4,000 or more.		
					For exchanges having 600 or more subscribers	For exchanges having from 400 to 600 subscribers.	For exchanges having from 200 to 400 subscribers.

REPORT OF EXPLOSIVES DIVISION DEPARTMENT OF MINES

THE annual report of the Explosives Division of the Dominion Department of Mines for the year 1921 shows a total of 20 factories licensed for the manufacture of explosives during the year. Three new factories were established for the manufacture of blasting explosives and one for the manufacture of fireworks. Thirty-one visits of inspection were made of these factories, and in one case it was found necessary to suspend for a time the license of a factory because of repeated contraventions of the regulations. A considerable increase was shown in the number of magazines under license, or continuing certificates, or temporary license; there being in effect at the end of De-

cember, 72 licenses—including continuing certificates—and 98 temporary licenses. Several of these temporary licenses were issued in the latter part of the year, in anticipation of the requirements of construction works and logging camps in the spring. All the magazines in use were inspected, and there were many reinspections. Visits were made to 125 cities and towns for the purpose of inspecting certain representative stores as well as discussing with officials of various municipalities questions relating to the conditions of storage. Systematic inspections were made by the Royal Canadian Mounted Police of over 1,500 premises containing explosives; two visits on the aver-

age having been paid to each. A change was made in the regulations previously in force under Order in Council of March 1, 1920 (P. C. 363) by an Order in Council of August 13, 1921 (P. C.

2864), whereby licenses for factories and magazines were made valid for periods not exceeding one year. Three hundred and twenty-eight permits were issued for importations during the year. The accompanying table shows the number of killed and injured by explosives and their causes.

Circumstance or cause	In mines and quarries		Other uses		Total	
	No. of		No. of		No. of	
	Killed	Injured	Killed	Injured	Killed	Injured
1. Manufacture	0	0	2	5	2	5
2. Keeping	0	0	1	3	1	3
3. Conveyance	0	0	3	0	3	0
4. Use and miscellan- eous shot firing—

(e) Hang fires and re- turning too soon to shot-hole	2	1	2	0	4	1
(f) Tampering with miss-fired shots....	0	0	0	1	0	1
(g) Ramming or stem- ming the charge....	0	1	2	3	2	4
(h) Sparks, flames, etc.	0	0	0	2	0	2
(i) Boring into un- exploded charges....	1	5	0	0	1	5
(j) Striking unex- ploded charges in removing debris....	1	6	0	0	1	6
(k) Preparing charges	0	4	1	2	1	6
(l) Various	1	0	0	0	1	0
Miscellaneous—						
Various	0	0	1	3	1	3
Total	12	31	18	29	30	60
Playing with detona- tors	0	0	1	22	1	22
Playing with other ex- plosives	0	0	1	8	1	8
Total	12	31	20	59	32	90

The accidents due to playing with detonators and other explosives are shown in the report to have been brought about by persons, usually children, tampering with explosives they have found. The report emphasizes the necessity of persons permitted to store small quantities of explosives for their private use, keeping them as prescribed by the regulations and terms of license for the larger users of explosives. Of the two fatalities that occurred in manufacturing, one was attributed to spontaneous ignition of the free admission of air to the explosive, a part of which had probably been in contact with heated bearings, and the other fatality occurred while the employee was removing dry fulminate of mercury from the drying house. One fatality in the conveyance group was due to the cart conveying the explosives being hit by a train, and two deaths occurred when a box of dynamite being carried by a man fell, due to the breaking of the strap by which the box was slung.

FIRST ANNUAL REPORT OF THE ONTARIO DEPARTMENT OF LABOUR

THE Ontario Department of Labour recently issued its first annual report containing an account of the work accomplished in 1920. It is recalled that the Department was provided for by an Act of the Legislature passed in 1919, but came into actual being somewhat later, the present minister being the first incumbent of his office. The Trades and Labour Branch, superseded by the new Department, was established in 1916, charged with the duty of administering the Factory Act, the Bureau of Labour

Act, the Steam Boiler Act, the Stationary and Hoisting Engineers' Act, and the Building Trades Protection Act. It was also instructed to conduct investigations into labour conditions and laws, and to make suggestions for any change which might seem desirable in laws affecting labour. The rapid development of the Employment Service and of the other work of the Branch suggested the necessity for a distinct Labour Department. The first duty of the new Department was to complete the investigations

already under way into the question of setting up a Minimum Wage Board and a Mothers' Allowances commission. Both of these bodies have since been established. A series of bulletins, entitled "Vocational Opportunities in Ontario", was also undertaken. (Some of these publications have been reviewed in previous issues of the LABOUR GAZETTE.)

A large part of the present report is occupied with the report of the General Superintendent of Ontario Government Employment Bureaus. The bureaus, he reports, "have now been firmly established and are functioning with a gratifying degree of success." Much detailed and intensive work, however, remains to be done before the service can be considered as complete. Development should be, the report claims, in the direction of setting up a service for specialized employment in certain fields, including a service for professional and technical men and women; and for the placing of handicapped and juvenile workers. The scope of the Employment Bureau should not, in the opinion of the Provincial officer, be limited by "a policy of false economy," which would hamper the service as a permanent and efficient institution.

Under the Stationary and Hoisting Engineers' Act 9,941 certificates were granted during the fiscal year ending October 31, 1920, to stationary engi-

neers; 700 candidates qualified by examination in the 4th class; 433 in the 3rd class; 60 in the second; and 35 in the first class, the balance of the total number being renewals from the previous year. The number of hoisting engineers' certificates for the same period was 1,819.

The inspection of factories, shops and office buildings was carried out by a staff of twelve inspectors, of whom three were women. Inspections during the year numbered 13,812, of this number 5,199 being second inspections. The total number of employees in the industries inspected was 203,923. Of this number 72,644 were females over 18 years of age; 8,547 were females between the ages of 14 and 18; and 281 were children under 14 years. Six prosecutions were instituted for violation of the Act, convictions being secured in all cases.

During the year 117 complaints were investigated, about half of these being upheld. Several complaints were made through trade unions and associations; others came from individuals, and two or three were anonymous. The accidents reported during the year numbered 5,185, with 55 fatalities, as compared with 4,029 accidents and 57 fatalities in the previous year.

The report also contains the records of boiler inspection in the Province during the year.

MINING ACCIDENTS IN ONTARIO IN 1921

THE Ontario Department of Mines recently issued its report on accidents occurring during the year 1921 at the mines, metallurgical works, quarries and clay and gravel pits regulated by the Mining Act of Ontario. The report shows that 1286 accidents, of which 24 were fatal, occurred in 1921; as compared with 1526 accidents, of which 29 were fatal, in 1920. In 1921 about 9,000 workers were employed as against about 11,486 in 1920. The

greatest number of fatalities in recent years occurred in 1913 when 64 men were killed out of a total of 16,293 workers employed. The highest ratio of fatalities per 1,000 employees in recent years was in 1908 when 47 fatalities occurred with 9,185 men employed, the percentage being 5.11. In 1921 the percentage was 2.66 per 1,000 employees as against 2.61 in 1920.

The classification of fatalities in 1921, according to industry, was as fol-

lows: 6 at gold mines and mills, 4 at silver mines and smelters, 3 at iron mines and blast furnaces, 1 at iron pyrites mines, 2 at nickel mines and smelters, 5 at limestone quarries and 3 at gravel pits. An analysis of the fatalities at the mines for the years 1920 and 1921 is given as follows:

	1920	1921
	Per cent	Per cent
Falls of ground.....	23.8	33.33
Shaft accidents	9.5	16.66
Explosives	23.8	16.66
Miscellaneous underground.	14.3	25.00
Surface	28.6	8.33

Of the 1,262 non-fatal accidents, 597 occurred underground and 246 at the surface of the mines, 211 at the metallurgical works and 208 at the quarries, clay and gravel pits. The highest number of these accidents at the mines occurred while working at chutes, 110 being reported; at the metallurgical works falling objects were responsible for 25 accidents, and at the quarries, clay and gravel pits 44 accidents were caused by material while loading at face. Of these non-fatal accidents, 763 of the injured were English-speaking and 499 of foreign nationalities.

The following table shows the causes of explosive accidents:

	Non-fatal	Fatal
Explosion, while tamping..	3	1
Drilled into explosive.....	2	1
Struck unexploded charge with hammer or pick.....	1	1
Detonators	1	..
Premature explosion	2	1
Hit by rock from explosion.	1	1
Walked into blast.....	..	1
Explosion while shovelling..	2	..
Total.....	12	6

The report states that a knowledge of explosives and a strict observance of the Mining Amendment Act would have prevented 4 of the fatalities at the quarries and 3 at gravel pits.

With regard to Workmen's Compensation rates, the report states that the adjusted rates for 1920 and the provisional rates for 1921 show a decrease in the silver mining industry, a slight increase in gold and nickel-copper mining and a 50 per cent increase in quarrying. Most of the employees in the quarries were stated to be English-speaking but were unskilled in handling tools and material, had no knowledge of explosives and were seldom under skilled supervision such as prevails at mines. The Department of Mines has lately appointed an inspector who will devote all his time to the inspection of quarries, clay, sand and gravel pits in an effort to cut down the unnecessary accident hazard in this industry.

ANNUAL REPORT OF THE QUEBEC DEPARTMENT OF PUBLIC WORKS AND LABOUR

THE report of the Minister of Public Works and Labour of the province of Quebec for the year ending June 30, 1921, contains chapters on the inspection of industrial establishments, provincial employment bureaus, reports of the Registrar and Joint Registrar of Councils of Conciliation and Arbitration for Trade Disputes, Examination of Stationary Engineers, and report on the work of the Fair Wages Office.

The inspection of industrial establishments was carried on as in previous years. Much time was devoted by the inspectors to the enforcement of the law respecting the registration of children employed in factories and workshops, and this law was stated to have produced good results.

Private employment bureaus were inspected before the annual permits were issued. Many complaints were

made against certain registry offices for domestic servants but they were not suppressed as the government intended to establish a central bureau for the placing of domestics, charwomen and shop and office girls which will allow of the closing of all private employment bureaus for women. The reports of the superintendents of the employment bureaus show that notwithstanding the stagnation in business, the placing of the unemployed had not markedly diminished. During the year ending June 30, 1921, the operations of the provincial employment bureaus were as follows:

Number of unemployed.....	33,391
Vacancies notified by employers	14,433
Persons referred to employers.	14,784
Persons reported as placed....	12,237

In the report of the Registrar of Councils of Conciliation and Arbitration reference is made to the Municipal Strike and Lockout Act, which was applied for the first time in May 1921. Two cases were referred to the Council of Arbitration under this Act during the year. The first case was that of the Quebec Policemen's National Union which petitioned for arbitration with the city of Quebec as respondent. After many days' deliberation the Council recommended an increase in wages of \$1 a week. The second case was that of the Quebec Firemen's National Union, in which the arbitrators failed to agree upon an unanimous award, three re-

ports being presented. The majority of the Council recommended an increase of 75 cents per week; the arbitrator for the firemen recommended an increase of \$1.50 per week; and the arbitrator of the city of Quebec recommended a minimum wage of \$18 per week for new employees, with the existing scale for the others.

The annual report of the Board of Examiners for stationary engineers for the District of Montreal states that 1,219 applications for examinations were received during the year, and 1,199 passed the examinations, only 20 failing to do so. The licenses of 3,049 engineers and firemen were received making a total of 4,248 licensed engineers and firemen in the district. In the Quebec district 55 engineers passed during the year and the certificates of 1,135 engineers and firemen were renewed.

The report of the Fair Wage Officer states that during the year only one complaint was made to the Fair Wages Office concerning the wages paid by contractors on government works. These grievances were settled to the satisfaction of the interested parties after an inquiry. It is suggested that it would be more just to contractors and workmen if the scale of wages to be paid on contracts were prepared before asking for tenders and formed part of the specifications given to the contractors.

REPORT ON MINES AND QUARRIES IN NOVA SCOTIA

A REPORT on the mines and quarries of Nova Scotia for the fiscal year ended September 30, 1921, issued by the Nova Scotia Department of Public Works and Mines, has recently been received. The coal output for the year was 5,373,230 long tons and the sales were 4,715,977 long tons, showing a decrease in output of 314,740 tons and in sales of 371,767 tons compared with the

previous year. The total number of men employed at the collieries was 12,276 an increase of 968 over the previous year. The reduced output notwithstanding the increase in the number of men employed was attributed to a lack of demand for coal resulting in unsteady employment at the mines. The total quantity of coal distributed for consumption in Nova Scotia in the

fiscal year 1921, was 1,860,671 tons, a decrease compared with the previous year of 584,524 tons. This was due to the lessened consumption by the steel plants and the general depression in manufacturing of all kinds. There was also a decline in gold production, the output for the year having been 379 ounces as compared with 744 ounces in the previous year. The number of fatal

accidents in the coal mines of Nova Scotia during the fiscal year of 1921 was 29; this represented 3.36 per 1,000 men employed as compared with 2.30 in the previous year and an average of 3.71 during the last fourteen years. There were 5.39 fatalities per 1,000,000 long tons mined compared with 4.57 in 1920 and an average of 7.48 for the last fourteen years.

FACTORIES INSPECTIIN IN NOVA SCOTIA IN 1921 Development in Safety and First Aid Work

CONSIDERABLE progress in safety work in Nova Scotia is noted in the annual report of the Provincial factories Inspector, covering the year ending September 30, 1921. An interesting development during this period was the organization, for the first time, of employees' safety committees. Sixteen such committees were formed in as many different departments of the Dominion Iron and Steel Company, Limited, of Sydney, which company and the Dominion Coal Company, Limited, of Glace Bay, are now under the same management. An active safety campaign was carried on in this concern during the year, and the workshops are now reported as being "models of advanced methods of accident prevention and sanitation." The workmen's committees are said to be entering into the spirit of the movement with enthusiasm. Some committees meet once a week, and others on alternate weeks, safety measures being freely discussed and precautions taken where dangers exist. Careful records are kept by a secretary and copies sent to the safety department. Sub-committees are placed in charge of special departments of work, their recommendations being submitted to an executive committee for approval. Officials of the safety department assist the committees in an advisory capacity, and also see that their recommendations are carried out. "There is no reason to suppose", the chief inspec-

tor comments, "that the employees of this company will not respond as well as those in the steel plants in the United States, where the movement has produced such remarkable results." The report states that most employers now favour safety measures, the feeling of hostility towards factory regulations having disappeared. Employers now generally discuss precautions with the factory inspector in a cooperative spirit, the foreman and some of the machine operators being sometimes invited to join the discussions.

A corresponding development in first aid work is also noted. This growth is attributed partly to the first aid regulations of the Workmen's Compensation Board, which became effective on May 1, 1921, requiring every employer of more than fifteen workmen to provide a first aid kit. The importance of this provision is apparent from the number of cases of infection each year, some of these resulting in serious disability. Some employers, for instance the Imperial Oil, Limited, now retain a permanent physician on the plant, while in many other plants there is a trained nurse, with improved equipment, and the workers are generally instructed as to the danger from infection.

Child labour is stated not to be a serious problem in the Province. The statutory limit for employment is 14 years, but in addition many towns have

passed an ordinance under the authority of the Towns' Incorporation Act raising the working age to 16 years unless the child has reached a certain school grade. The result is that very few young persons under 16 are now employed in industry.

Discussing the accident statistics of the past year the chief inspector finds that while, notwithstanding decreased industrial activity in 1921, the reduc-

tion of industrial accidents generally amounted only to 22 per cent from the previous year's record, a substantial reduction had occurred in accidents of a serious nature. Reductions were effected in sawmills and woodworking plants, in the metal, car building, steel shipbuilding and repairing plants and steel and textile factories. On the other hand a slight increase was noted in the pulp mills.

LABOUR LEGISLATION IN GREAT BRITAIN IN 1921

THE following is a summary of the more important laws affecting labour which were passed by the British parliament in 1921.

A number of laws were enacted dealing with the problem of unemployment. The Unemployment Insurance Act, 1921, which came into effect on March 3, increased the weekly rates of benefit to 20s. for men and 16s. for women and to half these amounts for boys and girls between 16 and 18 years of age. It provided that a maximum of 16 weeks' benefit could be drawn during each of two periods one from March 3 to November 2, 1921, and the other from November 3, 1921, to July 2, 1922. The Act provided that after this date there would be a return to the rule under which the number of weeks' benefit that may be drawn is made proportionate to the number of contributions paid. The treasury was also given power to make advances not exceeding at any time £10,000,000. On account of the unexpected increases in unemployment, the Unemployment Insurance (No. 2) Act, 1921, was passed on July 1, by which the weekly benefit was reduced to the rates fixed by the Act of 1920, namely 15s. for men and 12s. for women and the joint weekly contributions of employers and employees were increased to 1s. 3d. in respect of men and 1s. 1d. in respect of women. There were corresponding reductions of benefit rates and increases in contributions in

the case of boys and girls. The waiting period was increased from three to six days. In addition to the benefit periods of sixteen weeks laid down in the previous Act, the Minister of Labour was empowered to provide for two additional periods of benefit of not more than six weeks each. Section 44 of the principal Act was repealed, which allowed during the first year the payment of eight weeks' benefit to the insured persons in respect of whom four contributions had been paid. Other provisions of the Act suspended the power of the Minister to make or approve special schemes under section 18 of the principal Act, and raised the limit of the amount of advances that may be made by the Treasury to the Unemployment Fund to £20,000,000. On November 8, the Unemployed Workers' Dependents (Temporary Provision) Act 1921, became law. This provided for the payment of temporary grants for six months to unemployed workers in receipt of unemployment benefit toward the maintenance of their wives, dependent husbands and dependent children. In certain cases housekeepers having the care of dependent children are included. The grants are at the rate of 5s. a week for a wife, housekeeper or dependent husband and 1s. a week for each dependent child. The necessary funds are derived from special contributions payable in respect of all persons insured under the Unemployment

Insurance Acts. Other Acts passed to meet the unemployment situation were the Trade Facilities Act which enabled the Treasury after consultation with an advisory committee to guarantee the payment of interest and principal, or either interest or principal, of any loan calculated to promote employment in the United Kingdom. Under the Local Authorities Financial Provisions Act and the Poor Law Emergency Provisions (Scotland) Act, local authorities were aided in carrying out various public works to provide employment. The Unemployment (Relief Works) Act, 1920, which would have expired on December 3, 1921, was continued until December 31, 1922, by the Expiring Laws Continuance Act, 1921. This law expedites the processes by which local authorities may compulsively acquire lands for public works.

The Coal Mines De-Control Act, 1921, brought to an end government control of the coal mining industry on March 31.

Part IV of the Railways Act, 1921, which deals with the reorganization of the railways, contains important provisions concerning labour. The Central and National Wages Boards are re-constituted and continued until January 1, 1924, up to which date all differences as to rates of pay, hours of labour, etc. will be referred to the Central Wages Board, or on appeal to the National Wages Board. The Central Board is to be composed of eight representatives of railway companies and eight of railway employees. The National Board is to be composed of six representatives each of the companies and of the employees and four representatives of the users of railways, with an independent chairman nominated by the Minister of Labour. The four representatives of the users of railways are nominated, one each, by the Parliamentary Committee of the Trade Union Congress, the Co-operative Union, the Association of British Chambers of Commerce, and the Federation of British Industries.

The Corn Production Acts (Repeal) Act, 1921, substituted conciliation committees in place of the Agricultural Wages Board and District Wages Committees, to deal with wages, hours and conditions of employment. The formation of the new committees is voluntary, but is to be encouraged by the Minister of Agriculture and Fisheries as regards England and Wales and by the Board of Agriculture for Scotland as regards Scotland. Until a joint conciliation committee is established under the new Act, or until the expiration of two years, the representative members of the District Wages Committees will act as a joint conciliation committee.

The National Health Insurance (Prolongation of Insurance) Act, 1921, prolongs the insurance of persons who are able to show that their absence from work has not been due to any change of normal occupation, but to inability to obtain employment. This law is retroactive from December 31, 1920, and will continue until December 31, 1922.

The Expiring Laws Continuance Act, 1921, provides for the continuance of certain acts among which are mentioned: (1) the Workmen's Compensation (War Addition) Act, 1917, which will continue until December 31, 1922. This act increases by one-fourth the weekly payments payable by way of compensation under the Workmen's Compensation Act, 1906, during total incapacity; (2) the Shops Early Closing Act, 1920, which requires shops, with certain exceptions, to be closed not later than 8 o'clock on every day, except Saturday, and not later than 9 o'clock on Saturday.

The Education Act, 1921, consolidated the provisions of the statutes relating to education and the employment of young persons and children in England and Wales. In particular it substantially re-enacts the provisions of the Education Act, 1918, relating to the establishment of Continuation Schools and compulsory attendance at such schools for 320 hours in each year

(which may during the first seven years be reduced to 280) of young persons up to the age of eighteen. During the first seven years, however, the attendance of young persons between the ages of 16 and 18 is not obligatory. An important provision re-enacted is that giving power to the Local Education Authority for Higher Education to re-

quire a young person's employment to be suspended on any day when his attendance at a continuation school is required, not only during the actual school hours, but also for a sufficient period, not exceeding two hours, to render him mentally and bodily fit to receive full benefit from his attendance at the school.

CONCILIATION AND ARBITRATION IN DENMARK

IN order to meet the greatly increasing demand in Denmark for conciliation in labour disputes, an Act came into effect on January 1, which has for its object the improvement of the legislation of 1910 (amended in 1918 and 1919), which provided for a Permanent Arbitration Court and a Public Conciliator.

The Permanent Court consists of an equal number of representatives of employers and workers elected by their respective national federations, with a president and two or three vice-presidents of judicial qualifications, who are paid officials. The jurisdiction of the Court extends to industry and handicrafts, agriculture, transport and commerce, and general office work. Its functions are to enforce and interpret existing collective agreements. Up to the year 1920 the Court dealt with 363 cases of which almost half fell within the last three years. Of these, 70 per cent were heard and settled; 20 per cent were disposed of in the preliminary proceedings, and 10 per cent were withdrawn.

The Public Conciliator is a paid official, appointed by the Minister of the Interior on the nomination of the Permanent Arbitration Court for a period of two years. His functions are defined in the Act as being "to endeavour to adjust disputes between employers and workpeople," his intervention or non-intervention in any particular dispute being left to his own discretion. Whenever a strike or lockout has occurred, or

seems likely to occur, which threatens to have serious consequences for the community, and after negotiations between the parties have proved fruitless, the Conciliator may, either on his own initiative or at the request of one of the parties, summon both to a conference. This summons they must obey. At this conference he is empowered to suggest terms of settlement, but these must not be published, according to the original legislation, without the consent of both parties unless a stoppage of work takes place. If, in the course of the negotiations, differences of opinion arise on important questions of wages or hours of labour, the Conciliator may require both parties to furnish information on these points; if the information furnished appears unsatisfactory, he may demand an examination of witnesses before the Permanent Court. Up to the year 1921, however, it had not been found necessary to make use of this power. During the period from October, 1910 to the middle of 1919, the Conciliator dealt with 132 cases, in 99 of which he succeeded in bringing about a settlement during the preliminary negotiations.

The new Act does not affect the Permanent Arbitration Court in any way. With regard to conciliation procedure it was agreed that the existing system had worked satisfactorily, and that there was no necessity for making any alteration in principle. In view of the great increase of work, it was, however, necessary to appoint three conciliators

instead of one. These have equal authority, and will apportion the work among themselves. Provision is also made for joint conciliation by all three in case of extensive negotiations. The Conciliators are to be appointed for three years, but the appointments must not terminate simultaneously, in order that there may be no interruption of the work.

The most important alteration is the replacement of the clause prohibiting the publication of the Conciliator's proposals without the consent of both parties by one which states that the pro-

posals may not be published without the consent of the Conciliator until the answers of both parties to the proposals have been received. A further new provision empowers the Conciliators to require any employers' or workers' organization to produce a copy of any collective agreement they may have concluded, while another provides that only the exact text of any conciliation proposal may be laid before any organization of employers or workers, and that the voting must take the form of a direct refusal or a direct acceptance of the proposal.

FAIR WAGE CONTRACTS, MARCH, 1922

DURING March the Department of Labour received for insertion in the LABOUR GAZETTE the following information relative to two fair wage contracts which were awarded by the Department of Public Works. Both contracts contained the usual fair wage clause which provides for the prompt payment of such wages as are current in the district in which the work is to be performed, and for observance on the various works under contract of the prevailing hours of labour, and which otherwise prevents abuses and secures the legitimate rights of the labour employed.

A statement was also received as to supplies ordered by the Post Office Department, subject to the Regulations for the Suppression of the Sweating System, the securing of fair wages, etc.

DEPARTMENT OF PUBLIC WORKS

Repairs, renewals, scraping and painting of tug "Witherbee" at Champlain Dry Dock, Lauzon, Que. Name of contractor, Davie Shipbuilding and Repairing Company, Ltd., Lauzon Quebec. Date of contract, March 21, 1922. Amount of contract, \$2,973.

Repairs, renewals, scraping and painting of dredge "P.W.D. No. 116"

(Progress) at Champlain Dry Dock, Lauzon, Que. Name of contractor, Davie Shipbuilding and Repairing Company, Ltd., Lauzon, Que. Date of contract, March 21, 1922. Amount of contract, \$2,125.

POST OFFICE DEPARTMENT

The following is a statement of payments made in March for supplies ordered by the Post Office Department, subject to the Regulations for the Suppression of the Sweating System, the securing of fair wages, and the performance of work under sanitary conditions:

Nature of Orders	Amount of Orders
Making metal dating stamps and type, and other hand stamps and brass crown seals.....	\$ 733.70
Making and repairing rubber stamps, daters, etc.....	141.55
Supplying mail bag fittings.....	2,250.00
Making up and supplying letter carriers' uniforms, etc.....	7,163.14
Repairing letter boxes, etc.....	110.75
Satchels	1,710.70
Stamping ink, pads, etc.....	364.89
Scales repaired	53.05

RECENT CHANGES IN WAGES AND HOURS OF LABOUR

THE following is a statement by industrial groups of the more important changes in rates of wages and hours of labour reported to the Department of Labour in recent months.

MINING.—*Timmins, Ont.* Wages of 1,500 gold miners were reduced 6 cents per hour, or 48 cents per shift at the end of January.

Porcupine, Ont. Wages of employees of mining companies were reduced at the end of January, reductions in one case being as follows: men in mill, formerly receiving 53-62 cents per hour, reduced to 47-56 cents; men in shops, formerly receiving 53-75 cents per hour, reduced to 47-69 cents; miners, formerly receiving 59-66 cents per hour, reduced to 53-60 cents.

IRON AND STEEL MANUFACTURES.—*Port Arthur, Ont.* Wages per hour of employees in shipbuilding were reduced 10 per cent on March 13, and hours per week increased from 54 to 60.

Hamilton, Ont. Wages of 17 jobbing moulders were reduced on February 11 from 80 cents per hour to 67½ cents; hours per week, 48.

Guelph, Ont. Wages of certain employees of one firm were reduced on January 9, as follows: iron moulders, from 61 1-9 cents; coremakers from 45 to 40 61 1-9-76 1-3 cents per hour to 52 7-9 cents.

TEXTILE MANUFACTURES.—*St. Hyacinthe, Que.* Wages of certain clothing workers were reduced 10 per cent on April 1, 1920, hours per week, 55.

Hamilton, Ont. Wages of clothing workers in one firm were reduced on February 1, as follows: cutters (men), from \$26.00-36.00 to \$25.00-32.00; off pressers (men), from \$34.00 to \$30.60; seam pressers (men), from \$18.00-29.00 to \$17.00-27.00; operators (men), from

\$20.00-41.00 to \$19.00-36.90; operators (women), from \$19.00-25.50 to \$18-24; tailors (men), from \$20-34 to \$19.00-30.60; hand sewers (women) from \$14.50-23.50 to \$14-23. Any receiving \$14 or under were not reduced. Hours per week, 44. In another firm an adjustment of the payroll in February affected 87 per cent of the employees by an average reduction of 8 1-4 per cent. In a third firm, reductions on February 1, were as follows: cutters (male), reduced from \$34.00 per week to \$30.60; trimmers (male), from \$28-34 to \$25.65-30.60; operators, male and female, from \$14-42 to \$13-38; hand sewers, male and female, from \$14-31 to \$13-30; pressers (male), from \$14.34 to \$10.00-30.60. Hours per week 40; no work on Saturday.

MISCELLANEOUS MANUFACTURES.—*St. Hyacinthe, Que.* Wages of employees manufacturing musical instruments reduced 10 per cent on April 1.

Peterborough, Ont. Wages of employees manufacturing electrical supplies were reduced about 10 per cent on February 1. The chief classes affected were: machinists reduced from a maximum of 75 cents per hour to a maximum of 61 cents; fitters from 40-67½ cents to 36½-55 cents; labourers, from 30-40 cents to 25-36½ cents. Rates for apprentices were changed from 18-24¾ cents to 18½-22½ cents.

BUILDING AND CONSTRUCTION.—*Halifax, N.S.* Wages in the building trades were reduced 15 per cent on February 17, as follows: carpenters reduced from 66 to 57 cents; plumbers from 70 to 60 cents; painters, from 66 to 57 cents; electricians, from 70 to 60 cents; bricklayers, masons and plasterers, from 75 to 64 cents, all working 44 hours per week.

Quebec, Que. Wages of painters were reduced on February 1 from 47-55 cents

per hour to 40-48 cents. Hours per day, nine in summer, eight in winter.

London, Ont. Wages of carpenters were reduced on February 1 from 75 to 70 cents per hour; hours per week, 44.

Ottawa, Ont. Wages of bricklayers, masons and carpenters were reduced 5 cents per hour to be effective on May 1, as follows: masons and bricklayers, reduced from 90 cents to 85 cents; carpenters, from 75 cents to 70 cents, all working 44 hours.

Toronto, Ont. Reduction in wages of plasterers effective April 1, from \$1.00 to 90 cents per hour, hours, 44 per week.

Windsor, Ont. Hourly wages of carpenters were reduced on April 1, from 90 cents to 80 cents, 48 hours per week.

Winnipeg, Man. Wages of plumbers were reduced from \$1.00 to 90 cents per hour, to be effective on May 1; hours per week, 44.

Victoria, B.C. Wages in building trades reduced on February 20 as follows: carpenters, from \$6.60 (June, 1921) to \$5.00; painters, from \$5.60 to \$4.80; plumbers, from \$7.20 to \$6.00; masons and bricklayers, from \$8.00 to \$6.80 and \$7.00; plasterers and stone cutters, from \$8.00 to \$6.80; electricians, from \$7.00 to \$6.00; sheet metal workers, from \$6.40 to \$6.00; labourers, from \$4.00-4.50 to \$3.50-4.00; all working 44 hours per week, and paid for 4 hours on Saturdays.

TRANSPORTATION — ELECTRIC RAILWAYS.—*Hull, Que.* Wages of all classes of electric railway employees reduced 2 cents per hour, retroactive to December 1, 1921, and effective until July 1, 1922, motormen and conductors being reduced from 41-48 cents per hour to 39-46 cents.

Brandon, Man. Reduction of 12½ per cent to employees of Municipal Railway. (See under Civic Employees.)

Saskatoon, Sask. Wages of motor conductors were reduced on January 1, from 60-70 cents per hour to 58-68 cents.

Wages in the mechanical department were reduced 2 and 2½ cents per hour. These are all civic employees.

Vancouver, B.C. Wages of all electric railway employees were reduced 10 per cent on January 5.

TRANSPORTATION — WATER.—*Halifax, N.S.* Wages of longshoremen reduced on January 1, from 65 cents per hour for day work to 55 cents, and from 75 to 65 cents for night work. Rates for handling bulk grain are ten cents per hour higher and have also been cut 10 cents per hour.

CIVIC EMPLOYEES. — *Amherst, N.S.* Wages of civic officials and employees were reduced 10 per cent on March 1. Street labourers were reduced from \$20.64 to \$18.00 per week of 54 hours; police patrol men were reduced 10 per cent on the old rate of \$90-105 per month.

Brandon, Man. Wages of civic employees were reduced 12 1-2 per cent on January 1, hours remaining the same. Wages for last year were: Street railway department: motormen, 45 to 50 cents; car cleaners, 43 cents, hours, nine per day. Pumping station: firemen, \$110 per month; labourers, 40 cents per hour, 48 hours per week. Health department: teamsters and helpers, 40 cents, 50 hours per week. Works, sewer and water departments: labourers, 40 cents; cement finishers, 52 1-2 cents; cement foreman, 60 cents; scantling men, 47 1-2 cents, 50 hours per week.

Saskatoon, Sask. Wages of electrical workers were reduced about 2.75 per cent, effective January 1. Street Railway employees' wages were reduced—see under "Transportation." Wages of the clerical staff have been reduced in many instances 2.75 per cent.

Edmonton, Alta. Wages of civic employees were reduced February 1, as follows: wages of fire fighters were reduced \$5 per month; wages of employees in the police department were reduced \$5 per month; wages of employees at power

plant were reduced 4 cents per hour; wages of teamsters and common labourers were reduced from 60 to 54 cents per hour, and of experienced labourers, from 65 to 59 cents; operators of engines and boilers, from 70 to 64 cents and meter installers, etc., from 75 to 69 cents. Telephone operators' wages were reduced

from \$80-95 per month to \$71-91. Steam shovel and dredgemen's wages were reduced from \$1. to 88 cents, and civic carpenters from 82 to 78 cents.

Saanich, B.C. Wages of 95 civic labourers were reduced from \$4.00 to \$3.20 per day. Hours per week, 44.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Similar agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees, but verbal agreements are also included in the records, the latter being schedules of rates of wages, hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In the case of each agreement the rates of wages for principal classes of labour are given, with other information of general interest.

Printing and Publishing.

NANAIMO, B.C.—ONE PRINTING FIRM AND INTERNATIONAL TYPOGRAPHICAL UNION No. 337. Agreement signed by one firm to be in effect from May 1, 1921, to November 1, 1922, and verbally accepted by others from May 1, 1921, pending a general settlement *re* the forty-four hour week in Vancouver.

Minimum wages: per week—journeymen, compositors, typesetting machine operators, ad-men and other employees of news and job composing rooms, day work, \$39; night work, \$42.

Hours per day, hand compositors, floormen, machine operators, 7½, in all offices doing book, job and newspaper work combined; 44 hours to constitute a week's work. In case of a

weekly half holiday, eight hours per day on five days, and four hours on any stated sixth day.

Foremen, 50 cents per day or night above journeymen's wages.

Apprentices in fifth year, two-thirds of journeymen's wages.

Beginners on machines to be active members of union and receive wages as per special agreement. One apprentice for each five machines, or fraction thereof.

Overtime, first five hours, time and one-half. Thereafter, double time. Holidays, double time. Five hours to constitute a night's work before holidays, on morning papers.

Operators on machines to be journeymen members of union, in good standing. Apprentices in last six months to have privilege of practising on machines.

A sub, after working in an office for fifteen days not to be discharged for incompetency, provided foreman has not previously notified chairman of incompetency of said sub.

Apprentices.—One apprentice for each six journeymen. No youth under sixteen to be apprenticed. Apprentices after second year to be compelled to take the I. T. U. course, Union to advance loan for same if necessary. During second and third years, apprentice must be employed on composition at least two and one-half hours per day, and one-half such time on display work. During fifth year, apprentice must be allowed to work

eight months on make-up and four months on type-setting machine. Apprentices in last year to be paid two-thirds of journeymen's scale.

Controversies to be referred to an arbitration board of three, one appointed by each party and a chairman appointed by them.

Building and Construction.

OTTAWA.—OTTAWA BRANCH OF THE ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRIES AND THE OTTAWA DISTRICT COUNCIL OF THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS OF AMERICA. Agreement to be in effect from May 1, 1922, to April 30, 1923, with four months' notice prior to expiration by party desiring changes.

Hours per day, eight; four on Saturday.

Overtime from 5 p.m. to 10 p.m. and Saturday afternoon, time and one-half. Thereafter, double time. In case of two or more shifts, men to receive regular rates during these hours.

Minimum wages: per hour—70 cents.

Both parties to agreement agree to establish an industrial council of five members from each party with an independent chairman chosen by both parties, to adjust disputes—decision to be binding.

New Year's Day, Dominion Day and Christmas Day to be recognized holidays. No work on Labour Day except for saving of life or property.

Union representatives to be allowed access to all jobs to confer with the shop steward.

Both parties agree to adopt and enforce the National Apprenticeship System as adopted at the Joint Conference of Building and Construction Industries in May, 1921—to be revised by both parties to this agreement.

Union members to have preference of employment, other things being equal.

TORONTO, ONTARIO. — CONTRACTING PLASTERERS AND MEMBERS OF THE INTERNATIONAL CONTRACTING PLASTERERS' ASSOCIATION OF TORONTO, AND INTERNATIONAL UNION OF PLASTERERS OF AMERICA, LOCAL 48 OF ONTARIO. Agreement to be in effect from February 10, 1922, to April 30, 1923.

A Committee of five from each party to meet three months previous to expiration of agreement to discuss a renewal or otherwise.

An Arbitration Committee of five from each party to hear and adjust questions arising between parties. Both parties by all lawful means to compel members to comply with the agreement and working rules, members refusing to do so to be suspended.

Wages: per hour—February 10, 1922, to April 30, 1923, \$1.00. Overtime, from 6 p.m. until 10 p.m. time and one-half. After 10 p.m., and after 6 p.m. on Saturdays, Sundays and holidays, double time. Saturday afternoon, no work.

In the event of a contract having to be done with shifts, wages for same to be deferred to the Arbitration Committee for adjustment, prior to contract being made.

Due consideration to be made by Union in regard to day labour being supplied to general contractors and others to whom tenders have been given by the Association. Union members may work for such firms when a settlement has been made by the Arbitration Committee.

Member desiring to contract or sub-contract must resign from union and not re-enter for six months.

Union to give precedence to Association in supply of men. No employer to be permitted to advertise for plasterers without first consulting business agent of Union. If he is unable to furnish same, employer may then advertise.

Union not to order strike against Association, nor members of union to leave work before matter is brought be-

fore a joint committee. No members to leave work or take part in any sympathetic strike, except on two-thirds majority vote of entire membership of union.

Any firm in business for one year to be allowed one apprentice whose indenture shall be for four years. Any firm or persons employing eight men to be allowed a second apprentice. Union to support and enforce carrying out of indenture.

All parties to report to their respective bodies any known violation of agreement.

Association agrees not to do any work for any person owing and refusing to pay any just sum to any members of union for work performed. Union agrees to same conditions for members of Association.

Union to work only for registered plastering contractors. This does not apply to owners or general contractors.

Employers having men working in elevator shafts and other such openings should aim to protect them from injury by enclosures.

Shop hands.—Any firm in business over one year to be allowed one apprentice to every eight men working on the bench, to be indentured for four years. When first apprentice enters fourth year, a second may be taken on. Apprentice must be put on model making, casting, and all other parts of staff work.

All shop hands must have qualified and served their time in the staff shop where only union members shall be employed. If union fails to supply shop hands, employers may engage men from local 48, or other men with a travelling card.

Business agent to be permitted to interview men after permission is granted by contractors.

WINNIPEG, MAN.—MASTER PLUMBERS' ASSOCIATION, AND PLUMBERS' AND STEAMFITTERS' UNION No. 254. Agree-

ment to be in effect from May 1, 1922, until May 1, 1923. Notice of change or amendment may be given one month prior to termination. If no notice is given, agreement to remain in effect from year to year.

Hours of labour, eight per day, four on Saturdays.

Minimum wages per hour for journeymen, 90 cents.

New Year's Day, Dominion Day, Labour Day and Christmas Day to be legal holidays. Overtime from 5 p.m. until 10 p.m., time and one-half; after 10 p.m. until starting time, and Saturday afternoons, Sundays and legal holidays, double time.

Men sent out of town to have transportation, board and lodging paid.

Absolutely necessary repairs and finishing up of repair jobs on regular working days to be done at regular rate if less than one hour.

No member to do any lumping or sub-contracting, no material to be installed within the city unless supplied by a legitimate master plumber.

One apprentice of each craft to be allowed to each shop; one additional to each five journeymen; not more than four to a shop. Apprentices to serve five years; three years helping and two years with the tools. An apprentice using the tools to receive not less than 40 cents per hour for first year and 50 cents for second year.

Grievances to be referred to a joint arbitration board of three from each party, board to have power to settle grievances and to appoint an arbitrator if necessary. This board to meet during January each year to decide satisfactory scale of wages to be effective the following May.

To carry out agreement a Joint Conference Board of three masters and three journeymen to meet at least monthly with power to make recommendations for improving the general conditions of the trade.

Firms who have signed the agreement to be protected against a strike in shops which have not signed.

Public Utilities.

HAMILTON, ONT.—DOMINION POWER AND TRANSMISSION COMPANY AND CERTAIN OF ITS EMPLOYEES, MEMBERS OF THE CANADIAN ELECTRICAL TRADES UNION, HAMILTON BRANCH. Wages and conditions in effect prior to February 15, 1922, to continue in force for a further period of six months from March 1, 1922, and thereafter, subject to 30 days' notice from either party, this to be retroactive to February 15, 1922.

Civic Schedules, Etc.

SASKATOON, SASK.—COUNCIL OF CITY OF SASKATOON, BY-LAW REGULATING WAGES AND WORKING CONDITIONS OF MUNICIPAL STREET RAILWAY, IN EFFECT FOR 1922.

One-man cars.—Wages: per hour — Motor conductors and inspectors, 1st 6 months, 50 cents; 2nd 6 months, 60 cents; 3rd 6 months, 64 cents; 4th 6 months, 66 cents; 3rd year and thereafter, 68 cents maximum for inspectors, 68 cents. Motor conductors training students to be paid 5 cents per hour above schedule. Sunday rate, time and one-quarter. Holidays, time and one-half. Man required to make extra trips after the regular schedule has been worked to be allowed time and one-half. Motor conductors on snow sweeper or work car to be paid at maximum rate for time worked up to ten hours, thereafter, time and one-half.

No discrimination by either party against any motor conductor for being or not being a union member.

Superintendent to arrange the schedules of runs to conform as nearly as possible with the eight-hour day. This clause not to apply to inspectors, who shall work nine hours per day.

Reasonable leave of absence to be granted to all employees when services can be spared. When possible through

change in service or schedule, six months' leave of absence to be granted to as many men as can be spared, preference of application for such leave being given to returned soldiers.

After one year's service prior to May 1, each motor conductor to be entitled to one week's holidays with pay during the succeeding year, and after two years' service, two weeks' holidays. Not more than six men to be away at once. Sick leave up to two weeks to be allowed to hourly and daily employees who have been in the service for one year. Sick pay to be approved by a committee of two representatives chosen by the men and one by the superintendent.

Motor conductors to be furnished with uniform each year, and if leaving within six months after issuance of same to have opportunity of returning or buying same. After six months, uniform to become property of motor conductor.

Proper officials of the city at all times to treat with motor conductors or a committee of same on any subject in their interests or in the interests of the city.

Complaints or grievances to be heard by the proper officials of city, and if decision is not satisfactory to employee he may appeal to the mayor, commissioner or city council.

Mechanical Department.—Wages: per hour—lineman, 88.4 cents; lineman's helper, 77.6 cents; blacksmith, 67.5 cents; junior mechanic, 66.6 cents; skilled mechanic, 72.5 cents; pitman and general worker, 56.5 cents, car cleaner and helper, 51.5 cents.

Hours of car barn men, shopmen and linemen, nine per day; overtime, time and one-half; Sundays, (when a regular duty day) time and one-quarter. All men in these classes, one rest day in seven. Emergency work on Sundays or public holidays, double time; public and civic holidays when regular duty days, time and one-half. This not to apply to trackmen or greasers, who shall be allowed additional pay for overtime only as determined by the superintendent.

In event of men being taken on, city reserves right to pay wages according to ability.

Employees in service for one year prior to May 1, one week's holidays with pay; for two years, two weeks. Not more than three men to be off at same time.

Sick leave to be allowed with pay after one year's service, same not to exceed two weeks. Sick pay to be approved by a committee of three.

Office staff: wages, per month: chief clerk, \$146.40; clerk, \$141.40; night clerk, \$121.30. These officers to perform duties as assigned by superintendent on Saturdays, Sundays and holidays. Each member of staff to have twenty-one days' holidays with pay each year after one year's service. No overtime to be paid to any of these employees. Each member to be allowed sick pay up to two weeks.

SASKATOON, SASK.—COUNCIL OF CITY OF SASKATOON, BY-LAW REGULATING WAGES AND WORKING CONDITIONS OF EMPLOYEES OF THE PUMPING PLANT AND ELECTRICAL DEPARTMENTS, IN EFFECT FOR 1922.

Outside Electrical Workers.—Hours per day, eight and one-half, excepting Saturday, four and one-half. Meter readers and wiring inspectors, seven hours per day, four on Saturday. Workers, after regular hours: till 10 p.m. time and one-half; after 10 p.m., or on holidays, double time; Saturday overtime from 12.30 p.m. and double time from 5.30 p.m.

Any worker having charge of four or more journeymen or twelve or more labourers to be deemed a sub-foreman. Every sub-foreman must have had at least three years' experience.

One apprentice to every two journeymen; apprentices not to work on a high voltage nor on primaries.

Special provisions are made for work on high voltage and high tension wires.

The electrical engineer or line foreman may dismiss any worker without notice when his work has been completed or is proving unsatisfactory. In filling a vacancy seniority of service to be given preference.

Minimum wages: per month—meter reader and collector, \$139.25 and \$138.70; wiring inspector, \$165.70; per hour—sub line foreman, 94 cents; leading lineman, 90.9 cents; lineman, 88.4 cents; wireman, 78.2 cents; are patrolman, 72.2 cents; meter installers, 72.4 cents; arc trimmers, 67.4 cents; tungsten patrolman, 60.9 cents; apprentice linemen, from 57 cents for 1st three months to 69.5 cents for last nine months.

Power House Workers.—Hours per day, 9, with $4\frac{1}{2}$ on Saturdays (excepting shift men). Workers called to work after completion of a regular day's work, time and one-half to 10 p.m.; thereafter and holidays, double time. If a double shift of men is ordered, no overtime to be allowed until after first nine hours. Monthly workers to work over eight hours only in event of breakdown at plant. Workers whose duties demand Sunday labour, one day off in seven or overtime on seventh day.

Wages: per month—construction foreman, \$159.60; turbine attendant, boiler room attendant, \$138.70; switchboard operator, \$148.80; chief electrician, \$177; storekeeper, \$130; meter repairer and tester, \$156.70; per hour—skilled mechanic, motor mechanic, 72.5 cents; blacksmith, 67.5 cents; foreman boiler cleaner, 67.2 cents; boiler cleaners, ash and coal handlers, 57.4 cents; mechanic's helpers, 57.4 cents.

Pumping Station Workers.—Monthly workers not to work over eight hours per day except in case of a breakdown in the plant. Sunday workers, one day off in seven or overtime for seventh day. Hours per day, nine.

Minimum wages at pumping station and filtration plant; per month—Shift engineer, \$154.40; spare engineer, 1st 12 months, \$143.20; fireman, \$133.70; oiler and cleaner, \$118. Workers re-called

to duty after hours, time and one-half to 10 p.m.; thereafter, double time. In case of double shift, overtime only after nine hours.

General conditions.—All workers who are paid on monthly basis, with exception of Chief Engineers, Wiring Inspector, Draughtman, Construction Foreman, Meter Readers, after one year's service, fourteen days' holidays per year. The above mentioned classes

to have twenty-one days per year. No overtime to be paid to any of these workers. Hourly employees, one week's holidays after one year's service; two weeks after two years.

Those temporarily laid off to be entitled to holidays on a pro rata basis. Sick pay to be allowed up to two weeks after one year's service, sick pay to be approved by a committee of at least three electrical workers.

PRICES, RETAIL AND WHOLES ALE, IN CANADA, MARCH, 1922.

THE movement of prices was slightly downward during March, the retail prices food budget averaging 6c lower and the index number of wholesale prices showing a decline of 4 points or nearly 2 per cent. The chief changes were in eggs and dairy products.

In retail prices the average cost in some sixty cities of a family budget of twenty-nine staple foods was \$10.54 for March as compared with \$10.61 for February; \$13.23 for March last year; \$15.98 for March, 1920; \$13.05 for March, 1919; \$12.65 for March, 1918; \$10.70 for March, 1917; and \$7.68 for March, 1914. The chief changes for the month were in eggs, milk, butter, and cheese, but there were slight increases in meats and slight decreases in nearly all of the other items. Coal and wood were practically unchanged. The total for food, fuel, and rent averaged \$20.96 for March as compared with \$21.07 for February; \$23.87 for March last year; \$25.01 for March, 1920; \$20.99 for March, 1919; \$20.00 for March, 1918; \$17.16 for March, 1917; \$14.22 in March, 1916; and \$14.39 in March, 1914. Between 1914 and 1916 the increase in food costs was more than counterbalanced in the budget by the average decrease in rent, due chiefly to steep declines in western cities.

In wholesale prices the index number, based upon the average prices of 271 articles in the decade 1890-1899, was

225.6 for March as compared with 229.5 for February; 263.1 for March last year; 349.0 for March, 1920; 277.6 for March, 1919; 269.2 for March, 1918; 224.9 for March, 1917; and 137.0 for March, 1914. The chief changes during the month were increases in grains, livestock, miscellaneous foods, and decreases in metals and building materials. All groups were lower than a year ago except fruits and vegetables and raw furs.

A special index number of 50 commodities including 20 foods, 15 raw materials and 15 manufactured goods, based upon prices in 1913 as equal to 100, was slightly lower, being down to 148.1 for March as compared with 148.4 for February and 148.0 for January, 174.3 for March, last year, and 241.0 for March, 1920.

An index number of 40 commodities calculated by Professor H. Michel, designed to reflect sensitively industrial conditions, was down to 157.1 for March as compared with 159.1 for February, 190.0 for March, 1921, and 295.2 for April, 1920.

An index number calculated by the Canadian Board of Commerce for goods mainly exported was down to 148.27 for March as compared with 150.43 for February, and that for imports was down to 144.93 for March as compared with 145.65 for February. Flour, oatmeal, wool, worsteds, mess pork, coke

and linseed oil were up but metals were down.

The table of retail prices and rentals shows the prices at the beginning of March of over one hundred staple foodstuffs and groceries, of coal, wood and coal oil, and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity and every effort has been made to ensure that the quotations in each case refer to the same class of commodity, in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these have been published each month since the beginning of 1910, the figures being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers who did a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915, when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts chiefly occupied by workingmen. The first class is of houses in good condition, favourably located in such districts, with good modern conveniences. The second class is of houses in fair condition less desir-

ably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportion of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises (or falls) abnormally the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the difference in quality. It was estimated, when the budget was first published in 1912, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income. While the budget serves to show the increase or decrease from time

(Continued on page 446)

(*) Preliminary figure. (†) Nine commodities off the market, fruits, vegetables, etc. One line of spelter was dropped in 1915. (‡) Revised. (§) Misprinted in this table in March issue.

to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruits, fresh and canned vegetables, etc., so that the comparative expenditure would be little changed.

The index number of wholesale prices is based on the quotations for 271 commodities and is the simple average of the percentages of current prices of the several commodities in relation to the average prices for the base period, 1890-1899, these being therefore made equal to 100. The quotations for most farm products are obtained weekly and averaged for the month; the quotations for other commodities are taken for the middle of the month. The table of index numbers shows the changes by groups and sub-groups for the previous month and for the corresponding months back to 1913.

Retail Prices

In meats there were slight increases in the averages, most lines of beef being up $\frac{1}{2}$ c per pound, while in fresh pork the advances were slightly greater. Lard advanced slightly. Fresh eggs were down, averaging 50.7c per dozen as compared with 56.2c in February; 71.2c in January; 55c in March last year; and 85c in January last year. Cooking eggs were similarly lower. Milk averaged 12.7c per quart as compared with 13c in February;

13.3c in January; 15c in March last year; and 15.5c in January last year. Dairy butter averaged 37.5c in March as compared with 38.8c in February; 41.7c in January; 53.1c in March, 1921; and 56.7c in January, 1921. Creamery butter averaged 43.5c per pound in March as compared with 44.7c in February; 48.6c in January; 63c in March, 1921; and 63.6c in January, 1921. New cheese averaged 28.4c in March as compared with 28.7c in February; 29.3c in January; 37.7c in March, 1921; and 37.5c in January, 1921.

Bread averaged 7c per pound, being unchanged, as compared with $8\frac{1}{2}$ c in March last year and 8.8c in January last year. Soda biscuits averaged 18.2c per pound as compared with 18.8c in January and 20.9c in March last year. Spring wheat flour averaged 5c per pound as compared with 7c a year ago. Rolled oats averaged 5.5c per pound as compared with 6.8c a year ago. Rangoon rice averaged 9.6c per pound as compared with 12c a year ago. Tapioca averaged 12.1c as compared with 14.3c a year ago.

Canned tomatoes averaged 19.2c per tin, practically the same as a year ago. Canned peas averaged 19.2c per tin as compared with 19.7c a year ago. Canned corn averaged 17c per tin as compared with 18.8c a year ago. White beans averaged 8.6c per pound as compared with 9.4c a year ago. Onions averaged 12.4c per pound as compared with 9.8c in February, 8.1c in January, 4.7c in March, 1921, and 5c in January, 1921. Potatoes averaged \$1.56 per bag as compared with \$1.60 last month, \$1.58 in January, \$1.72 in March last year, and \$2.23 in January, 1921. The chief changes for the month occurred in New Brunswick where the average

price was down from \$1.48 in February to \$1.35 in March. In British Columbia the average for the province showed a slight increase, that is from \$1.82 to \$1.87. Eating apples averaged 44.8c per gallon as compared with 43.7c in February, and 45c in March last year. Evaporated apples averaged 22.6c per pound as compared with 21.7c in February, and 22.9c in March last year. Prunes, raisins and currants were practically unchanged for the month. Strawberry jam, raspberry jam, canned peaches, pears, and plums, and marmalade averaged slightly lower. Sugar averaged slightly lower. Tea and coffee showed little change. Cocoa averaged 29.4c per pound as compared with 30.1c last month and 32.4c a year ago. Cream of tartar averaged 77.5c per pound as compared with 77.8c in February, and \$1.01 a year ago. Laundry starch averaged 12.3c per pound as compared with 14.2c a year ago. Laundry soap averaged 8.2c per bar as compared with 9.2c a year ago.

Anthracite coal averaged \$17.39 per ton as compared with \$17.44 in February, \$17.54 in January, and \$18.95 in March last year. Bituminous coal averaged \$10.99 as compared with \$11.28 in February, \$11.46 in January, and \$13.82 in March last year. Hard wood averaged \$12.59 per cord as compared with \$12.73 in February, \$12.83 in January, and \$14.13 in March last year. Soft wood was similarly lower. Coal oil averaged 31.8c per gallon as compared with 38.8c a year ago. Matches averaged 14.6c per box, the same as a year ago.

The rent of six-roomed houses with conveniences averaged \$27.65 per month as compared with \$27.73 in February, and \$26.78 in March, 1921. The

decrease in the average for the month was due to a decline in rent at Niagara Falls of \$5 a month, some industrial plants having closed down.

Wholesale Prices

GRAINS AND FODDER.—Wheat, No. 1 Northern, at Winnipeg eased off from \$1.47 per bushel which had been reached at the end of February as a result of a continued rise from \$1.11 at the beginning of the year, to \$1.37. Barley had risen to 67c but eased off to 64c per bushel. Oats had risen to 52c per bushel but eased off to 48c. Corn at Toronto had risen to 76c per bushel but was down to 74½c. Flax seed at Winnipeg reached \$2.43 per bushel in February but fell to \$2.29 in March. Fodder showed little change.

ANIMALS AND MEATS.—Cattle at Winnipeg advanced from \$6.50 per hundred pounds to \$6.75. The price at Toronto was steady. Beef and veal were steady. Hogs fell from \$12.75 per hundred pounds to \$11.75 but later recovered. Breakfast bacon advanced from 27c per pound to 28c. Hams advanced from 29c to 31c. Barrelled pork rose \$1.00 to \$34.00 per barrel. Lard was ½c higher at 17½c per pound. Sheep, mutton, and lamb were steady.

DAIRY PRODUCTS.—Finest creamery butter at Montreal was up to 37½c per pound at the beginning of the month but eased off to 36c. Cheese was down from 18½c per pound to 17c. Fresh eggs were down from 40c to 33c per dozen. Milk at Montreal was down from 29c per gallon to 25c, and at Victoria from 35c to 27c.

FISH.—The market for salt fish showed some improvement and the stocks of herring were reported to be cleaned

up. In the lobster fishing on the western coast of Nova Scotia there was reported to be a small catch. Prices were as high as 30c to 40c per pound for large lobsters. The West Indian market for dried fish showed improvement.

FRUITS AND VEGETABLES.—Winter apples were higher, northern spies rising from \$12.00 per barrel to \$13.00 and baldwins and greenings from \$8.00 to \$10.00. Bananas were firmer at 8c per pound, rising from 7½c. Messina lemons were \$1.00 lower at \$5.50 per box. Oranges were up from \$6.50 per box to \$7.25. Evaporated apples advanced from 17½c per pound to 18½c. Prunes were ½c higher at 13c per pound. White beans were firmer at \$4.25-4.50 per box. Onions were easier at Montreal at \$8.00 per bag. Canned corn was easier at Toronto at \$1.20-1.50 per dozen.

MISCELLANEOUS FOODS.—Rolled oats advanced from \$3.10 per bag to \$3.25. Flour, spring wheat patents, advanced from \$7.90 per barrel to \$8.40 at Toronto. Winter wheat flour advanced from \$5.70 to \$6.40. Glucose was higher. Sugar was steady. Baking soda was down from \$3.00 per hundred to \$2.85.

TEXTILES.—Woolens and cottons showed little change. Raw silk, Japan, was down from \$6.90 to \$6.20 per pound. Jute was slightly higher.

HIDES, LEATHERS, BOOTS, AND SHOES.—Tallow was easier at 3c to 5c per pound. The hide and leather market was steady.

METALS AND IMPLEMENTS.—Iron bar was down from \$2.85 per hundred to

\$2.75. Black sheets were down from \$4.30 per hundred to \$4.05, and galvanized sheets from \$6.75 to \$6.50. Antimony was easier at 8c-9c per pound. Brass declined from 30c per pound to 29¼c. Copper, lead, solder, tin, and zinc were lower. Quicksilver had fallen to \$48.00 per seventy-five pound flask but recovered to \$51.00. Bar silver fell from 65¾ per ounce to 63¾c. Axes and horse shoes were lower.

FUEL AND LIGHTING.—Anthracite and bituminous coal were unchanged, but furnace coke advanced from \$3.00 to \$3.50 per ton at the ovens.

BUILDING MATERIALS.—New Brunswick shingles fell from \$6.50 per M. to \$5.75. Pine shipping culls at Ottawa fell from \$67.00 per M. to \$60.00 and box boards from \$45.00 to \$34.00. Spruce fell from \$25.00 per M. to \$23.00. Plaster of Paris was down from \$5.00 per barrel to \$4.75. Wire nails were down from \$3.95 per keg to \$3.75. Copper wire was down from 14¾c per pound to 14¼c. Iron wire was down from \$3.80 per hundred to \$3.60. Wire fencing fell from \$4.50 to \$4.30. Turpentine was easier. Paris green was down from 46c per pound to 32c.

HOUSE FURNISHINGS.—Glass tumblers declined 10 per cent.

DRUGS AND CHEMICALS.—Alum and coppers were firmer, but brimstone was easier.

MISCELLANEOUS.—Binder twine, Sisal, was down to 11½c per pound. Crude rubber was down from 17c per pound to 16c.

PRICES IN THE UNITED KINGDOM AND IN OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movement of prices in other countries as compared with Canada.

The index numbers of retail prices which are listed are from official sources unless otherwise stated. The authorities for the wholesale price index numbers are named in all cases.

United Kingdom

WHOLESALE PRICES

The Board of Trade index number of average prices for February (taking prices for 1913 as 100) was 165.1 as compared with 167.4 in January, a decline of 1.3 per cent. In each of the three food groups there is an increase, the general level for food being 2.5 per cent higher than in the previous month. The five groups of industrial materials show a reduction of 3.4 per cent, each separate group being lower, the cotton group showing the greatest fall, namely 6.8 per cent.

The *Statist* (Sauerbeck's) index number of wholesale prices at the end of February, taking the average of prices in 1867-77 as 100, was 132.2, a drop of .3 points or .2 per cent from the previous month. Foodstuffs advanced 2.6 per cent and materials dropped 2 per cent.

The *Economist* index number, which has for base the average of prices in 1901-05 as 100, stood at 193.6 at the end of February. This was a decline of 1.1 points or .5 per cent from the level of the previous month. Increases were shown in the cereals and meat

group of 4.4 per cent and in the miscellaneous (rubber, timber, oils, etc.) group of 1.2 per cent, and decreases in the other food products (tea, sugar, etc.) group of 2.1 per cent, in textiles of 2.7 per cent and in minerals of 4 per cent.

The *Times* index number of wholesale prices of 60 commodities at the end of March was 156.2 as compared with 155.9 at the end of February, giving a slight rise of 0.2 per cent. This is the first rise since April, 1920. During the month of March, the food index declined 0.3 per cent, and materials rose 0.6 per cent.

COST OF LIVING

At the beginning of March the official index number for foods in the food budget was, as stated last month, 177. Eggs and fish were cheaper than on February 1, as were also milk, butter, margarine and imported beef. These decreases were largely offset by increases in bread, flour and mutton. At the beginning of April the food budget showed a further decline and stood at 73 per cent above July, 1914, a decrease of about 2.2 per cent for the month. The index numbers for other items are: rent, 155; clothing, 240, fuel and light, 215; sundries, 195; all items, 182, as compared with 155, 245, 220, 195 and 186 a month earlier.

France

WHOLESALE PRICES

The official index number of wholesale prices for February, basis 1901-1910=100, shows a decrease of 8.5 points, or 2.3 per cent from the level

(Continued on page 452)

*For South Africa, Australia and New Zealand base is taken as 1000 instead of 100. a. Average for year. b. Quarter beginning in specified month. c. 230 commodities, 1890-1909; 272, 1910-1914; 271, 1915-1922. d. New index number is joined to old index number (38 commodities) and all converted to base 1913=100. e. The commodities in these two new index numbers are in the one case articles chiefly exported; in the other case, articles chiefly imported. f. First of month. g. Middle of month. h. End of month. i. Monthly.

of the previous month. While the decline of the index for foods was slight, being only .1 per cent, owing to a considerable increase in the sugar, coffee and cocoa group, the decline of industrial materials was nearly 4 per cent.

Belgium

COST OF LIVING

The unweighted index number for 56 articles in 59 localities, base, April, 1914=100, stood at 387 in January, 1922, a drop of 6 points, or 1.5 per cent from the previous month. The index number for Brussels decreased 8 points or 1.9 per cent during the month under review.

Holland

WHOLESALE PRICES

The official index number of the Central Bureau of Statistics for prices of 53 articles in Holland, prices in 1901-10=100, stood at 183 in January, a decrease of 5 points or 2.7 per cent from the previous month. Foods alone decreased 3.8 per cent during the month under review.

COST OF LIVING

The official index number of the Central Bureau of Statistics of cost of living of 29 articles in 6 cities, base 1893=100, stood at 187 in January, a decrease of 4 points, or 2.1 per cent from the previous month.

Germany

WHOLESALE PRICES

The index number of wholesale prices issued by the Federal Statistical Office, base 1913-14=100, rose from 3487 for December to 3665 for January and 4103 for February. The upward trend has been increasingly noticeable since the middle of January. At that time the

value of the mark in exchange began to drop swiftly which, with certain economic factors within the country accounts for the increase in wholesale prices. The index number of foods rose from 3229 in December to 3509 in January, and 3956 in February, increases of 8.6 and 12.3 per cent respectively. Industrial materials decreased from 3969 in December to 3955 in January, owing to decreases in textiles and metals, and increased again to 4377 in February, or 10.7 per cent.

COST OF LIVING

The official index number of cost of living, food, heating, lighting and rent in 39 cities in Germany, 1913-14=100, rose from 1550 in December to 1640 in January and again to 1989 in February—an increase in the latter month of 21 per cent. This is an increase of 120.8 per cent above the cost of living in February, 1921. The index number for foods alone rose from 2219 in January to 2727 in February—508 points, or 22.9 per cent. Factors influencing the cost of living have been the removal of the governmental control of grain, the rise in railway rates and the legalization of increases in rents. Food prices have been especially influenced, the output for heat, light and rent not having increased so much.

Austria

COST OF LIVING

The official Statistical Office reports that the index number of cost of living for a family of four in Vienna (January, 1921=100) rose from 966 in December to 1194 on January 15 and 1500 on February 15. The increases amounted to 24 per cent from December to January, and 26 per cent from January

to February. Figures compiled in Vienna by a commission recently appointed to investigate the weekly cost for one person of the most important necessities of life, show that index numbers (December 15, 1921=100) rose as follows from January 14 to February 14: Food, from 129 to 150; clothing, from 115 to 121; heat and light, from 126 to 187. Lodging remained unchanged, at 164. The increase in the

total is from 125 to 148 for the period under review.

Italy

WHOLESALE PRICES

The statistical office of the Chamber of Commerce and Industry at Milan has published a new monthly index number of wholesale prices at Milan, the average prices for the period May-December, 1921, being taken as 100. The index up to February, 1922 is as follows:

INDEX NUMBER OF WHOLESALE PRICES IN MILAN, ITALY, COMPUTED BY THE CHAMBER OF COMMERCE AND INDUSTRY OF MILAN.

(Average prices May-December, 1921-100.)

Date	I Edible vegetable products	II Edible animal products	III Textiles	IV Chemicals	V Minerals and metals	VI Con- struction ma- terials	VII Miscella- neous vege- table products	VIII Miscella- neous indus- trial ma- terials	General average	Food products (groups I & II)	Indus- trial ma- terials (groups III-VIII)

COST OF LIVING

The index number of the Municipal Labour Office at Rome of a complete budget for a working man's family increased from December to January 6.82 points or 1.61 per cent, a continuance of the monthly increase which has taken place since July. The foods alone included in the budget increased 2.34 per cent during the month under review.

India

COST OF LIVING

The official index number of retail prices in Bombay shows for January a decline of nearly 3.4 per cent from the previous month, and in February,

a further decline of 4.6 per cent from the level of January. Foods declined 13 per cent in the latter month; fuel and lighting and house rent remained the same; and clothing declined 8.2 per cent.

United States

WHOLESALE PRICES

The index number of wholesale prices in the United States compiled by the Federal Reserve Board showed that prices during February increased 4 points, or 2.9 per cent. Imported goods did not change, but domestic goods increased 4 points, or 2.9 per cent. The largest increases were in raw materials and finished consumers' goods.

Gibson's average index number of prices for 22 articles of food for March was 73.3, an increase of 4.4 per cent from the monthly average for February, and a higher figure than that for any month since April, 1921.

Bradstreet's general index number for April 1 was \$11.5317, a decrease of nearly .6 per cent from March 1. The decline was general, being found in 10 of the 13 groups. Thirty-four articles declined, nineteen advanced and fifty-three remained unchanged. This is the second slight decline in ten months. The groups advancing were live stock, fruits and miscellaneous products. The *Annalist* index number of price of a food budget of twenty-five foods, taking the average of 1890-99 as 100, was 182.710 on April 15. Although this is a slight increase over the number for March 11, there were intermediate fluctuations—declines until April 1 and increase thereafter.

COST OF LIVING

The index number of retail prices of 43 foods in 51 cities, published by the United States Bureau of Labour Statistics, shows a decrease of only .3 per cent in prices in February as compared with January. There was a decrease of 2 per cent in prices in March as compared with February. During the latter month, 17 articles decreased in price, the chief decreases being strictly fresh eggs, 34 per cent; potatoes, 6 per cent; cabbage, 5 per cent. Twenty-one articles increased in price, the most notable increases being: oranges, 11 per cent; lard, 9 per cent; pork chops, ham and navy beans, 7 per cent; lamb and onions, 6 per cent.

The cost of living index number for Massachusetts for the month of March is 155.3, the average for 1913 being taken as 100. This is a drop of nearly .9 per cent from the previous month. Slight decreases were shown in food, clothing and fuel, while shelter and sundries remained the same.

RECENT LEGAL DECISIONS AFFECTING LABOUR

THE two legal decisions which are summarized below relate respectively to a case of Workmen's Compensation

in Saskatchewan and a case of damages under Common Law for illness in Ontario.

Right of injured workman in Saskatchewan to apply for award under Compensation Act after unsuccessful action at Common Law.

A railway employee in Saskatchewan met with an accident in the course of his employment, which caused the loss of a leg. He brought an action against the railway company for damages, and the case came before a jury in the Court of King's Bench. Judgment was entered for the plaintiff on the answers of the jury to certain questions. The defendant

company appealed, and the judgment was reversed and the action dismissed with costs. Within thirty days after the decision of the Court of Appeal, application was made by the injured workman to the Court, to assess the damages to which he would be entitled under the Workmen's Compensation Act, but the hearing of the application took place

later. The motion to assess compensation was opposed by the company on the grounds: first, that the application was not made in time, and secondly, that the provision in the Act for assessment after an unsuccessful appeal had no application to the facts of the case. The first contention was not supported by the Court, it being held that there was nothing whatever in the argument that the motion must be brought on for hearing within the thirty days; and the further argument that under Section 8 of the Act it was too late after judgment was given to determine that the injury was one for which the employee would have been liable for compensation under the Workmen's Compensation Act, was met by reference to a judgment in the Supreme Court of Canada. (*Western Trust Co. vs. City of Regina*, 55 S.C.R. 628). In this judgment it was stated: "My conclusion is that so long as the application for the assessment of compensation is not made too late, having regard to the provisions of the Act, that application may be treated as a proceeding in the action for the purpose of enabling the trial judge to determine, on the hearing of the application, the existence or non-existence of the elements of responsibility under the Workmen's Compensation Act." With respect to the other contention raised for the com-

pany, that the provision for assessment after appeal had no application to the facts of this case, Section 8 of the Act provided that "the judge before whom such action is tried shall if the plaintiff chooses, either immediately or *in case of an unsuccessful appeal* upon notice to the opposite party within thirty days after the disposition of such appeal, proceed to assess such compensation and to adjudge the same to the plaintiff." It was argued that the plaintiff did not choose to apply immediately and that there had been no unsuccessful appeal; the only appeal in the action was that of the defendant company, which was a successful appeal. The Court held that this was too narrow a construction of the Act. The wording "unsuccessful appeal" might well be extended to include any appeal in which the plaintiff had not succeeded in establishing his right to recover damages at common law. As the section stood the language used was far from satisfactory, but the intention was clear to permit an award to be made in favour of a plaintiff who had been unsuccessful in a common law action even after appeal.

The plaintiff was accordingly awarded \$2,000 as compensation under the Workmen's Compensation Act.

(*Saskatchewan—Perry vs Canadian Pacific Railway Company.*)

Employer liable for damages in Ontario for illness of workmen due to insanitary premises.

The employees of a certain company in Ontario, who lived on premises belonging to the company, became ill and brought an action against their employers, alleging that their illness was due to the insanitary conditions of the premises. A jury found that the illness of

the plaintiffs was caused by the drinking of water taken from a well on the premises, and that the company was guilty of negligence. Judgment was given in favour of the plaintiffs for \$3,200 damages with costs. The company appealed against this judgment and the case was heard in the second Divisional Court.

It was held by a majority of this Court that even where there was no antecedent duty of one person toward another to perform any act for the latter's advantage, if the duty be undertaken even gratuitously the further duty was implied to perform it without negligence. Leaving aside any statutory duty under the Factories Act, and disregarding the duty owed by master to servant arising out of their relationship, the defendants having undertaken to supply the plaintiffs with drinking water, it became their duty to use due care to supply pure drinking water. That the plaintiffs were supplied with impure water was beyond question and there was ample evidence to support the finding of negligence. While Section 15 of the

Workmen's Compensation Act, 1914, takes away the right of a workman to sue his employer as at the Common Law in every case of a right of action "for or by reason of any accident which happens to him while in the employment of such employer," it was held that the illness in this case was not an accident within the meaning of the Act. Two members of the Court dissented, being of the opinion that what occurred was an accident within the meaning of the Act and that the plaintiffs were confined to their remedy by a claim preferred to the Workmen's Compensation Board.

The appeal was therefore dismissed.

(*Ontario — Costanza vs. Dominion Cannery Limited*).

MAY, 1922.

Number 5

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST.

The month
in brief

This issue, in addition to the regular monthly articles relating to industrial conditions, strikes, wage agreements, prices, etc., contains also quarterly statistical articles respecting employment conditions, and a number of short articles among which may be mentioned one outlining a decision in the High Court of Ontario respecting the enforcement of recommendations of boards of conciliation and investigation appointed under the Industrial Disputes Investigation Act, 1907, and another summarizing the new Unemployment Insurance Act of Great Britain.

At the beginning of April the percentage of unemployment among the members of local trade unions stood at 9.6 as compared with 10.6 in March and with 16.5 at the beginning of April, 1921. Short time was again indicated by many of the organizations making returns. According to reports received from over 6,000 employers, employment during April showed a favourable tendency, especially at the beginning of the month. The level of employment continued to be somewhat lower than that indicated by the concerns reporting for the corresponding period last year.

The average cost of the weekly family budget of 29 staples foods in some 60 cities was \$10.26 at the begin-

ning of April as compared with \$10.54 at the beginning of March; \$12.28 in April, 1921; \$15.97 in April, 1920; and \$7.51 in April, 1914. In wholesale prices the index number was 225.0 for April as compared with 225.6 for March; 253.7 for April, 1921; 353.1 for April, 1920; and 136.7 for April, 1914.

The time loss due to industrial disputes during April was much greater than during either March, 1922, or April, 1921. There were in existence during the month 24 strikes, involving about 17,478 workpeople with an estimated time loss of 381,135 working days. Ten of these strikes were reported as having commenced during April, five of which were terminated during the month leaving 19 strikes, involving about 17,071 workpeople on record at the end of the month.

**Proceedings
under the
Industrial
Disputes
Investigation
Act**

During the month of April the Department received a report from one Board of Conciliation and Investigation, which was established to deal with a dispute between members of the Association of Canadian Building and Construction Industries, Ottawa Branch, and certain of their employees being members of Local No. 428, International Hodcarriers, Building and Common Labourers' Union of America.

Three applications were received for the establishment of Boards, one of which was subsequently withdrawn. Three Boards were established, and the personnel of another Board which had been established in the previous month, was completed.

Jottings

Conventions of the following Canadian and international labour organizations will be held during the months of June and July:

Canadian Association of Stationary Engineers, at Kitchener, Ont., on June 27 to 29;

American Federation of Labour, at Cincinnati, Ohio, on June 12;

Canadian Carpet Weavers' Beneficial Association, at Toronto, Ont., in July;

International Steel and Copper Plate Engravers' League, at Chicago, Ill., on July 3;

International Alliance of Bill Posters and Billers of United States and Canada, at Kansas City, Mo., on July 3-8;

International Broom and Whiskmakers' Union, at St. Louis, Mo., on July 10;

Glass Bottle Blowers' Association of the United States and Canada, at Bellaire, Ohio, on July 10;

International Stereotypers' and Electrotypers' Union, at Cincinnati, Ohio, on July 17-22;

International Plate Printers and Die Stampers Union of North America, at Ottawa, Ont., on July 17.

The House of Commons, on May 1, adopted a resolution that "in the opinion of this House, the federal government should consider the advisability of devising ways and means for the establishment of a system of old age pensions in Canada."

It was announced in the House of Commons on April 19 that a complete pension scheme for the Canadian National Railways is now under investigation. It was also stated that estimates of the Department of Railways include a vote of \$50,000, the same as last year, to provide for increasing the minimum compensation from \$20 to \$30 a month for employees who have been superannuated under the present Provident Fund Act of the Intercolonial Railway.

The city of Montreal has appointed a special committee to investigate a pension scheme for its employees.

The Canadian National Street Railwaymen's Union, recently issued policies under the group insurance plan to its members. These policies are paid for as part of the members' union dues. The amounts vary according to the individual's period of membership. A policy of \$200 is issued after six months, which amount is increased \$100 each year until a maximum of \$1,000 is reached. The union has also undertaken to grant \$100 as death benefits to each married member on the death of his wife.

A labour delegation from Hamilton recently requested the Ontario government to amend the Mothers' Allowance Act to make provision for an allowance to be paid to a mother with one child.

At the annual meeting of the Alberta Teachers' Alliance a resolution was passed which opposed the alleged practice of school boards throughout the province of employing teachers by corresponding with several applicants at one time and holding the position open to the one who bids the lowest in salary.

At the annual convention of the Manitoba Postmasters' Association held in Winnipeg on April 18, a resolution was adopted urging the Dominion Association to make a more determined effort to obtain for postmasters an official day of from 8 a.m. to 6 p.m. with a reasonable scale of payment for all overtime. It was claimed that 90 per cent of the postmasters are paid on a commission basis, that the official hours are from 8 a.m. to 7 p.m. with no time allowance for meals, and that overtime work does not commence until 8 p.m. and ceases at 7 a.m.

The Toronto local union of Amalgamated Clothing Workers of America has secured the services of six professors and two lecturers of the University of Toronto to conduct classes for its members three times each week for six weeks, commencing April 23. The lectures include economics of modern civilization,

the English language, and labour problems.

The workmen's compensation law of Oregon provides for the physical reconstruction and vocational retraining of crippled men whose injuries prevent them from returning to their former employment, thus effecting, it is claimed, a considerable financial saving to the state industrial accident fund. Thoroughly equipped clinics have been established at Portland and Salem, where nearly one hundred seriously injured men are being treated daily. Vocational training is given through established vocational schools of the state, paid for by the workmen's compensation commission, while the living expenses of the men and their families during the period of training are carried by the rehabilitation fund.

A consular report from Copenhagen, Denmark, dated January 3, 1922, states that the Employers' Association of that country has notified the co-operative trade unions that they will not renew an agreement made in May, 1919, providing for the eight-hour day. The agreement would expire in March 1922.

An important employers' organization, the Osaka Industrial Society, Osaka, Japan, has decided to petition the Japanese government to enact the necessary labour legislation for establishing (a) a labour department, (b) a court for the settlement of labour disputes, (c) a system of pensions, (d) a system of social insurance, and (e) a law regulating labour unions. The government were also requested to increase the number of employment exchanges and to encourage housing societies.

The Japanese Department of Communications has drafted a bill providing for the creation under government control of free public employment exchanges for seamen. The bill embodies the draft conventions for establishing facilities for finding employment for seamen, adopted by the International Labour Conference at Genoa in 1920. It

includes clauses providing for subsidies to the pension fund to enable long service pensions to be increased, and provisions relating to old age and life insurance, medical arrangements and facilities for recreation.

**Dominion
Government
and the
8-hour day**

On April 10, a question was asked in the House of Commons as to whether the Dominion Government, pending the passing of legislation, would give instructions to have an 8-hour day put into effect on all Government works. The reply of the Government was as follows: "The practice with respect to works performed by the Dominion Government requires that the working hours shall be in uniformity with the practice or law of the locality. Since the provinces are understood to have under present consideration representations of the draft conventions passed at the First International Labour Conference held in Washington in October and November, 1919, in the opinion of the Government a change of practice or policy at the present time might only serve to create a misconception and confusion or to prejudice the position of the provinces in dealing with this matter."

**Proposed
Interprovincial
Conference on
Unemployment**

In the course of a debate on the unemployment situation in Canada the Prime Minister announced in the House of Commons on April 24 that the Government had already been in communication with representatives of some of the provincial governments with a view to having a conference on this subject, and that this conference would likely take place during the present year. "I would like to make it perfectly plain," the Premier added, "that so far as the Government is concerned we regard all these matters of unemployment and the like as questions primarily of concern to municipalities and to provinces, but in so far as the national interest may also be concerned we are prepared to co-oper-

ate with the municipalities and the provinces in seeking a solution." Mr. J. S. Woodsworth, M.P., for Winnipeg Centre, mover of the resolution under discussion, proposed that the Dominion Government should at the present session inquire into and establish a system of unemployment insurance, adopting the underlying principle "that industry should bear the burdens entailed by industry." On this suggestion the Prime Minister said: "I question very much whether, if we attempted to pass such legislation at the present time we would find that it comes wholly within the jurisdiction of this Federal Parliament." He recognized, however, "the obligation of the Federal Government to co-operate with the provincial governments in working out a system of insurance against unemployment." This would be one of the subjects to be discussed by the forthcoming conference.

**Dominion
legislation
requested by
Labour**

The Brotherhood of Locomotive Firemen and Enginemen, and the Brotherhood of Railroad Trainmen, recently

submitted to the Dominion Government through their Canadian legislative boards, a legislative programme which included the following proposals:

1. Amendments to the Income War Tax Act, 1917.

2. Amendments to the Dominion Elections Act: (a) repeal of clauses which prohibit labour organizations from contributing to an election fund; (b) abolishing forfeiture of election deposits; (c) insuring advance polls where a vote of twenty-five or more electors seems probable.

3. Immigration: (a) repeal of Bill 03 (1919); (b) further restrictions of oriental immigration.

4. Criminal Code: repeal of section 97a and 97b, Chapter 46, 1919 (First session).

5. Industrial Disputes Investigation Act. An amendment to ensure the more equitable application of the Act, especially in the matter of the arbitrary changing of wages and conditions of employment by employers.

6. Canadian National Railways to be under the Board of Railway Commissioners of Canada.

7. The consolidation of government owned railways.

**Independent
Labour Party
on unemploy-
ment**

A resolution in regard to unemployment was passed at the annual meeting of the Independent Labour Party of Ontario, held in Hamilton on April 14, as follows: "That the convention deeply regrets that unemployment is still prevalent throughout Canada and calls upon the provincial and federal governments to provide for every man and woman either work at recognized fair rates for the district, or full maintenance; that where municipalities fail to carry out the expressed desire of the government the granting of relief shall be done by joint committees representing both the federal and the provincial governments." Another resolution favoured the fixing of a minimum wage for any class or group of workers who might apply for it. Legislation for the weekly payment of all manual workers was also suggested.

**Ontario doctors
and Workmen's
Compensation
Board**

Replying to questions in the Ontario Legislature regarding the status of certain doctors under the Workmen's Compensation Board, the Provincial Minister of Labour stated on April 21 that the Board had from time to time directed "that certain doctors whose employment, by reason of inefficient services, neglect or unreliability in giving necessary reports and information, rendering of exorbitant or padded and dishonest accounts, or other cause, was not considered to be conducive to the proper administration of the Act, should not in future be employed or paid by the Board in workmen's compensation cases." Written notices were occasionally sent out to corporations and others intimating that certain doctors were debarred from working for the Board, namely, those who were previously associated with a factory or plant, and seemed likely to act also in a workmen's compensation case, or in regard to whom inquiries had been made by an employer or a workman. The Board's authority

for such action was contained in the Workmen's Compensation Act of 1914 as amended in 1917, which provides that "medical aid shall be furnished or arranged for by the Board, or as it may direct and approve," and that "all questions as to the necessity, character and sufficiency of any medical aid. . . shall be determined by the Board."

Dominion

housing loan in Nova Scotia

The Director of Housing for Nova Scotia laid before the Provincial Legislature on

April 10 a report on building operations in the province during the year 1921. The operations described in the report were those undertaken under the Dominion Order-in-Council (P.C. 2997), dated December 3, 1918, setting aside \$25,000,000 for housing throughout Canada, to be divided among the Provinces on the basis of their population. The original share of Nova Scotia under this arrangement was \$1,707,934, but in the last fiscal year the total Dominion appropriation was raised to \$31,250,000, increasing the proportion due to Nova Scotia to \$2,134,914, (Ontario and Quebec being the only other provinces to receive larger shares). Describing the results of the Act under which the province accepted the Dominion loan the report states: "It can safely be said that the Housing Act has been a success; it has been a boon not only to the homeseeker, but to those communities where it has been in operation, and fulfilled in a large measure the purposes for which it was intended." In all, 253 houses were built by means of the appropriation. Of these 184 were in Halifax; 28 in Dartmouth; 25 in Kentville; 6 in Stellarton; 3 in Yarmouth; 1 in Windsor, 6 in Antigonish. Inquiries are still being received from individuals, towns and municipalities, and many of these are likely to avail themselves of the housing loan.

Scholarships

offered by Canadian Pacific Railway

The Canadian Pacific Railway is offering two free scholarships, covering four years' tuition in architecture, chemical, civil, mechanical or electrical engineering at McGill University, subject to competitive examination, to apprentices and other employees enrolled on the company's permanent staff and under 21 years of age, and to minor sons of employees. The examination will be the regular entrance matriculation examination provided for in the University's annual calendar to be held at the university, Montreal, and at other centres throughout Canada in June, 1922. The scholarships will be awarded to candidates with the highest average who comply with the requirements of admission. They will be renewed from year to year, to cover a period not exceeding four years. If a scholarship holder is obliged to interrupt his course for a year or more, he must notify the Canadian Pacific Railway and the Dean of the Faculty of Applied Science at the close of the session, so that the scholarship may be open to other applicants, and that he may have prior claim to the next available scholarship, he must give notice of his intended return to the company and the Dean not later than January 1, preceding the opening of the session in which such scholarship will be available.

It is also announced that the Canadian Pacific Railway has authorized the granting of three scholarships of \$500 each annually to Toronto University for the purpose of inducing graduates of universities in Western Canada to pursue their postgraduate studies at Toronto University, with a view not only to keep these graduates in Canada but also that they may become better acquainted with conditions in the east, and so tend to promote Canadian unity upon their subsequent return to the west.

St. John Ambulance work on railways A recent report of the St. John Ambulance Association work on Canadian railways shows that 500 employees of the Grand Trunk railway system are receiving instruction in the classes. Five trophies are open for competition among the employees:—The Chamberlain silver shield, for the Grand Trunk Railway championship; the Dr. J. Alexander Hutcheson shield for competition among the Montreal teams; the Dr. Deacon trophy, for competition among the Stratford teams, and the Stratford divisional officers' trophy for competition among teams that have never won a trophy. The trophies are offered as a means of promoting efficiency among the employees. The Grand Trunk Railway maintains an organizer and three qualified instructors for the classes.

During the year ended September 30, 1921, first-aid instruction was given to 1,522 of the Canadian Pacific Railway employees, making altogether 17,309 who had received instruction. During the year 435 qualified certificates were awarded, 383 employees took higher examinations, and 46 classes were organized, including 6 at the Angus shops, Montreal. There were also other classes organized at different centres along the line. The following challenge cups were open for competition: Johnson, Angus Shop District; Downie, New Brunswick district; Scully, Algoma district; Grant Hall, Manitoba district; Taylor, Saskatchewan district; Price, Alberta district; and Busteed, British Columbia district.

At the annual meeting of the Association held at Ottawa on March 10, the trophy for the Canadian championship was presented to No. 2 Team, Grand Trunk Railway shops, Stratford, Ont., which also won the Wallace Nesbitt railway trophy. The trophies offered by Lord Shaughnessy for police teams were won, in the eastern group, by the Canadian Pacific Railway Angus shop team for the fourth successive year, and in

the western group, by the Canadian Pacific Railway Winnipeg police team.

Effective First Aid work in mining district The effectiveness of first aid work in the mining district of Iowa, where 14,000 miners dig coal from under the prairie stretches, is emphasized in a recent report by Dr. John M. Griffin, superintendent of the Miners' Hospital at Albia, Iowa. The idea that a man with a broken back is beyond recovery is out of date in that hospital, he states, where in recent years out of forty-four cases of broken backs among the coal miners operated upon nineteen have been able to return to productive labour in the mines. This salvaging of broken backs as well as the increased saving of eyes Dr. Griffin attributes to the proper handling of the cases at the time of injury by miners skilled in first-aid methods.

British Oversea Settlement Committee The British Oversea Settlement Committee in their report for the year [Cmd 1580] call attention to the present unsatisfactory situation with regard to emigration from Great Britain to the Dominions, and to remedy the evils of congestion in the former country and lack of population in the latter, they recommend a strong policy of state-aided Empire settlement, with co-operation between the government of the United Kingdom and the governments of the Dominions upon the largest scale which their finances will allow. In their opinion the chief steps in this co-operation should be:

(1) To pass legislation enabling the government of the United Kingdom to co-operate with the Dominions in a permanent policy.

(2) To convince Labour both here and overseas that the policy of laissez-faire, with its attendant evils, has been abandoned, and that one of the chief objects in view is to provide for the working classes of the Empire fresh openings and brighter prospects in a healthy life upon the land.

(3) To develop every stage of the proposed policy in the closest consultation with labour,

and as a first step forthwith to reinforce the representation of Labour on the Oversea Settlement Committee.

(4) To insist upon improved methods of selection, and improved arrangements for receiving and placing settlers upon the land overseas. (For the male settler the essential need is the provision of training farms where he can obtain the requisite experience in land work; for women the essential need is the provision of training in household work.)

(5) To encourage more particularly the settlement overseas of the young.

Settlement of jurisdictional disputes in United States The National Board of Jurisdictional Awards, which was formed toward the end of 1920 for the purpose of settling jurisdictional disputes between the various building trades organizations in the United States, has recently procured the adoption of a new national agreement for the purpose of providing better means for the enforcement of its awards. An account of the formation and work of the Board appeared in the LABOUR GAZETTE for January 1921, on page 63. The new agreement provides that local building trades councils shall suspend and refuse to recognize and support unions which fail to abide by decisions of the Board. It

also provides that contractors and subcontractors shall declare in agreements with union labour, their compliance with all decisions of the Board, and shall refuse employment to members of local unions which do not abide by decisions of the Board. Architects and engineers are also bound by the agreement to insert in all their specifications and contracts a clause providing that the Board's decisions shall be followed. This agreement was reached with the adoption of a report of a special committee of the Board which had been appointed to outline procedure in the case of the carpenters' union which had refused to accept a decision of the Board in a dispute between them and sheet metal workers. This dispute was over the right to set sheet metal trim on doors and windows which was awarded to the sheet metal workers. The carpenters followed their refusal to accept the award with strikes on large construction jobs. The organizations which are parties to this agreement are: Associated General Contractors of America, American Institute of Architects, Engineering Council, National Building Trades Employers' Association and the building trades department of the American Federation of Labour.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

I.—The Labour Market, Strikes, Prices.

The Labour Market.

THE volume of employment as reported by employers showed considerable revival during April from the losses reported at the end of March. At the close of April, however, temporary shut downs in some of the railway car shops caused large reductions in employment, but the declines were on a somewhat smaller scale than those indicated at the end of March. Unemployment as registered by trade unions showed a decrease

at the end of March as compared with the preceding month, whereas during the corresponding period of last year the percentage of idleness had shown an increase over the February figure. An increase was reported in the daily average of business transacted by the offices of the employment service during the early part of March, followed by a slight decline during the latter half of the month, the falling off in applications being most noticeable.

EMPLOYERS'
REPORTS

Half-monthly reports from employers to the Dominion headquarters of the Employment Service of Canada for the period March 16 to April 15 showed, on the whole, practically no change in the situation, large increases recorded in the first part of April offsetting reductions of approximately the same magnitude registered in the second fortnight of March. These losses represented contractions incidental to the closing at the end of the month of the railway car shops, supplemented by seasonal cessation of operations in logging camps, while the increases were mainly due to the re-opening of the same locomotive shops and to seasonal expansion in sawmills, building and railway construction and maintenance. All provinces except the Maritimes and British Columbia shared in the losses registered in the latter part of March, but there were decided increases in employment in every district during the first two weeks in April. As usual, the changes in Ontario and Quebec were the most noteworthy. Employment in the iron and steel industries showed considerable fluctuations during the four weeks under review, chiefly on account of the closing and re-opening of the locomotive shops. Increased activity was indicated in automobile factories, but employment in rolling mills, shipyards, agricultural implement works and boiler shops was not so brisk. The leather, rubber, sugar, biscuit, confectionery, tobacco, and textile industries, in the manufacturing division, also afforded less employment, although some of the declines especially those in April, were of a temporary nature due to shutdowns for inventories and repairs. The seasonal contractions in logging were very heavy, involving the release, by the firms making returns, of over 4,000 men. Activity in the coal fields also declined to some extent, though the losses were on a much smaller scale than those registered in logging. On the other hand the re-opening of sawmills provided employment for a large number of workers, while furniture factories

were slightly busier. Improvement was recorded in mineral products and chemicals, and in glass, cement, brick, and pulp and paper factories. Apart from the manufacturing industries, employment in quarries, asbestos and gypsum mines was more active than in March. The communication industries, street railways, cartage, shipping and stevedoring, also absorbed a greater number of workers. Increases on a large scale were registered during the four weeks under review in the building and railway construction and maintenance groups. The movement in both wholesale and retail trade was decidedly favourable especially in the latter, and in both cases the improvement occurred chiefly in the early part of April. Employment in the leather, lumber, rubber, and textile industries, in the mining of metallic ores, and in the transportation industries continued to be in greater volume than during the corresponding period of last year, but in almost all other industries the situation continued to compare unfavourably.

TRADE
UNION
REPORTS

The percentage of unemployment reported by trade unions at the beginning of April was rather smaller than that recorded at the beginning of the preceding month, 9.6 per cent of the members being out of work as compared with 10.6 per cent in March, and with 16.5 per cent at the beginning of April, 1921. (Unemployment as used here has reference to involuntary idleness due to economic causes. Persons occupied in work other than their own trades, or who are idle because of sickness, or as a direct result of strikes or lockouts, are not considered as unemployed. As the number of unions making returns varies from month to month with consequent variation in membership upon which the percentage of unemployment is based it should be understood that such figures have reference only to the organizations reporting.) Unions in Nova Scotia, New Brunswick, Ontario, Manitoba, and

British Columbia reported a more favourable situation than in February; in Quebec there was a fractional percentage increase in unemployment, while unions in Saskatchewan and Alberta reported in both cases approximately 2 per cent more idleness.

Returns for the beginning of March were received from 1,480 labour organizations representing 157,639 members, of whom 15,173, or 9.6 per cent, were out of work. Employment in the manufacturing industries declined slightly, iron and steel and food products affording less employment than in the preceding month. The pulp, paper, and lumber groups were busier and the textile and garment groups showed further improvement. In the building and construction group there was about 6 per cent less unemployment. On the other hand, the transportation industry reported a slightly larger percentage of idleness. Workers in the shipping and stevedoring group were more fully employed, but steam railway employees were rather slacker than at the beginning of March. Small declines in unemployment were registered by unions of miners, loggers and fishermen. Hotel and restaurant employees and unclassified workers were not quite as fully employed.

A review in some detail, with tabular statements, of the unemployment situation during the quarter ending March 31, as indicated by trade unions, is printed elsewhere in this issue.

EMPLOYMENT OFFICE REPORTS

During the month of March, 1922, the offices of the Employment Service of Canada made 27,407 references to positions; and effected 16,319 placements in regular, and 9,182 placements in casual employment. Of the placements made in the regular work, 13,520 were of men and 2,799 of women. Applications for work, registered at the offices during the month, numbered 42,144, of which 33,468 were of men and 8,676 were of women. The num-

ber of vacancies offered for men was 21,657 and for women 8,998—a total of 30,655 positions. During the early part of March continued expansion was shown in the volume of business transacted by the offices, and the number of applications, vacancies and placements, increased considerably, but during the latter part of the month a slight falling-off was reported. This decline, though slight, was most marked in the number of applications for work. On the whole, however, the level of employment as indicated by the reports from the offices was higher at the end of March than at the end of February of this year.

During the first half of March, 1922, the average number of applications made daily to the offices was 1,668, as compared with 1,523 during the latter part of February, and with 1,318 during the same period of 1921. Vacancies notified by employers to the Service averaged 1,158 daily, as compared with 960 during the preceding period and 862 during the first half of March last year. The average number of placements effected daily in regular and casual employment was 979, as compared with 839 during the previous period, and 775 during the corresponding period of last year. Of the placements made during the period under review, the daily average was 601 in regular employment and 378 in casual work.

During the latter half of March, applications showed a marked decline from the previous period, registering an average of 1,462 daily. During the same period of 1921 applications averaged 1,472 daily. An average of 1,115 vacancies was notified daily to the Service, as compared with an average of 1,187 during the latter part of March, 1921. Placements effected daily in regular and casual work averaged 912, as compared with an average of 934 daily during the same period a year ago. Of the placements made during the period under review, the average number daily was 608 in regular and 304 in casual employment.

A report of the work of the offices for the first quarter of 1922 may be found elsewhere in this issue.

BUILDING	Employment in the
PERMITS AND	building trades, as in-
CONTRACTS	dicated by the value of
AWARDED	the building permits is-

March, showed a pronounced increase over the preceding month. The total value rose from \$4,216,463 in February to \$9,160,889 for the month under review, a gain of \$4,944,426, or 117 per cent. As compared with March of last year there was an expansion of 39 per cent, the value for that month having stood at \$6,609,782. All provinces registered increases in the value of the building authorized as compared with the preceding month, there being especially large gains in Ontario, Quebec, and British Columbia. In Ontario there was an expansion of \$3,260,230, or 120 per cent. The increases in Quebec and British Columbia, though under \$725,000 in both cases, represented gains of 89 per cent and 148 per cent respectively. All the larger cities, Montreal, Toronto, Winnipeg, and Vancouver, showed advances in the value of the permits issued as compared with February, that of over \$1,000,000 in Toronto being especially noteworthy. In Halifax, Sydney, Sherbrooke, Kitchener, London, Ottawa, Port Arthur, Windsor, Regina, Saskatoon, Calgary, Edmonton, Point Grey and Victoria the value of the building authorized exceeded largely that reported in the preceding month.

A statement showing in some detail the value of the building permits issued by the 56 larger cities during the quarter ending March 31, 1922, is given elsewhere in this issue.

According to the *Canadian Building Review* issued by MacLean's Building Reports, Limited, the value of the contracts awarded during March totalled \$13,465,000, as compared with \$10,718,300 in February, and with \$10,256,700 in March, 1921. Of the total for the

month under review \$210,100 was to be expended in the Maritime provinces, \$11,708,400 in Ontario and Quebec and \$1,546,500 in the four Western provinces. This indicates that approximately 87 per cent of the contracts were awarded in Quebec and Ontario, less than 2 per cent in the Maritimes and over 11 per cent in the Western districts. Another analysis shows that \$5,930,800 was to be used for residential purposes \$5,267,200 for business buildings, \$260,000 on industrial erections, and \$2,007,000 for engineering contracts.

Strikes.

The loss of time on account of industrial disputes during April was greater than during either March, 1922, or April, 1921. There were in existence at some time or other during the month 24 strikes, involving about 17,478 workpeople with an estimated time loss of 381,135 working days, as compared with 19 strikes, involving 2,309 workpeople and 58,943 working days in March, 1922; and 29 strikes, 4,453 workpeople and 63,480 working days in April, 1921. On April 1, there were on record 14 strikes, affecting 2,170 workpeople. Ten strikes were reported as having commenced during April, compared with one during March. Five of the disputes commencing during April terminated during the month, leaving 19 strikes, involving 17,071 workpeople on record at the end of the month.

Prices.

The movement in wholesale prices, on the whole, showed little change during April, but in retail prices of foods there were substantial reductions in eggs, milk, and potatoes, with slight increases in meats and butter and little change in other items.

The index number of wholesale prices was down to 225.0 for April as compared with 225.6 for March; 253.7 for April 1921; 353.1 for April 1920; 231.1 for April 1917, and 136.7 for April 1914. The chief changes for the month

were increases in grain and fodder, live-stock and meats, and dairy products, with slight decreases in fresh fish, some fruits and vegetables, metals, building materials, and in raw furs.

In retail prices the average cost of a list of 29 staple foods in sixty cities was \$10.26 at the beginning of April as

compared with \$10.54 at the beginning of March; \$12.28 in April, 1921; \$15.99 in April, 1920; \$10.77 in April, 1917; and \$7.51 in April, 1914. The chief changes for the month were substantial decreases in eggs, milk, and potatoes. Meats averaged slightly higher except veal. Coal, wood, coal oil and rent were practically unchanged.

II.—Industries and Trades during April, 1922.

Logging

Employment in logging continued to decline heavily in many centres with the closing of camps after the winter's activity. In some cases, however, river driving temporarily caused moderate increases in staffs. In Quebec, reductions in personnel occurred at Louiseville; at St. Jovite Station, La Tuque and River Desert no changes were indicated, while employment in the Gatineau district increased largely. At Three Rivers there were moderate gains. In Ontario, varying conditions also obtained, increased activity being indicated at Haileybury and Braeside, while at Blind River, Fort Frances, Nestorville, Pembroke and other upper Ottawa points marked declines were registered. In British Columbia the tendency on the whole was more favourable. At Alert Bay and Headquarters larger working forces were employed, but at Ladysmith and North Vancouver there were slight declines in activity. Information respecting the month of March, which was not available for insertion in the April issue of the LABOUR GAZETTE, shows that timber of all species scaled in British Columbia in March totalled 148,215,662 feet as compared with 91,145,323 feet in the former month. The quantity of Douglas fir scaled was greatly in excess of other woods and together with red cedar formed approximately 80 per cent of the total.

Mining

Production in the mining industries as a whole, declined considerably during April, chiefly in the coal fields of Al-

berta and British Columbia, on account of the industrial dispute in existence during the month. In Nova Scotia the tendency, however, was slightly upward, increased activity being indicated at Little Bras d'Or, Springhill, Stellarton and Glace Bay. On the other hand, employment at Joggins Mines, Sydney Mines and Westville was in lesser volume. As mentioned above, strikes in the coal fields of Alberta and British Columbia affected conditions in these provinces very materially. In metal mining the situation was rather less favourable than in March. In Ontario, on the whole, the changes were slight, employment at Nickelton, Copper Cliff and Coniston remaining steady. The production of gold at Timmins was slightly greater but at South Porcupine and Schumaker, reductions in payroll were indicated. Silver mining in the Cobalt district remained on the March level. Employment in the copper, gold, silver and zinc mines in British Columbia showed local fluctuations. At Trail and Anyox increased activity was indicated, but at Rossland and Britannia Beach smaller staffs were employed. The mining of non-metallic minerals other than coal was in greater volume than in March. In Quebec, the asbestos mines at Asbestos and in some cases in Thetford Mines were busier, but the temporary closing for repairs of an important mine in the latter centre caused employment in the asbestos division to show a net decline. In Ontario the salt mines at Amherstburg displayed increased activity. Quarrying in some Ontario centres and also at St. John, N.B., employ-

ed rather larger working forces than in the preceding month.

Manufacturing Industries

FOODS, Employment in the edible plant products group showed a downward tendency during April, although in some instances increased activity was reported. Sugar refineries at Dartmouth, N.S., employed larger working forces than for several months and the production of chocolate products and confectionery at Halifax in the same province was also in greater volume. On the other hand, sugar factories at St. John and confectionery plants at St. Stephens in New Brunswick were not as busy as in March. In Quebec, the movement in the group as a whole was downward largely on account of reductions in personnel in Montreal sugar refineries and confectionery factories. Bakeries in the same city maintained the same level of employment as in March and very little change in the situation was indicated by biscuit manufacturers. The tendency in Ontario was unfavourable also. Biscuit and confectionery plants in the city of Toronto reduced their staffs largely. Sugar refineries at Chatham were not quite as busy as in March and at Wallaceburg the staffs remained stationary. The production of starch and glucose at Cardinal was in considerably greater volume than in the preceding month while at Fort William reduced activity was indicated. Pickle and sauce manufacturing at Leamington employed rather larger staffs than in March. In Manitoba less employment was afforded by manufacturers of plant foods. Biscuit factories at Winnipeg were not quite as busy and flour and grist mills in the same centre employed considerably smaller working forces. The flour and cereal mills at Moose Jaw, Sask., on the other hand, were decidedly busier. Employment in sugar refining at Vancouver, B.C., showed an increase.
